INTRODUCTION

TANG-GRIP PARTING LINE

Tangentially Clamped, Single-Ended Parting System

ISCAR's single-ended insert for parting with a rigid clamping method.

TAG insert features

- Very rigid clamping in a tangentially oriented pocket.
- Enables machining at very high feed rates and provides excellent straightness and surface finish.
- Recommended for parting large diameter parts and for interrupted cuts.

- Offers a free, unobstructed chip flow, since there is no upper jaw as in the other clamping systems (very important in deep grooving and parting applications).
- The combination of tangential clamping and free chip flow results in improved tool and insert lifetime.
- Provides a solution to the problem of inserts being pulled out during retraction.

INTRODUCTION

JET-CUT

The Double Sided DO-GRIP Insert with Internal Coolant Holes

The insert features a coolant hole that passes through the insert, with an outlet near the cutting edge. The **DGNC** inserts were designed for parting and grooving on stainless steel and high temperature alloys. When machining stainless steel or high temperature alloys, the temperature near the cutting edge becomes very high. These materials tend to adhere to the cutting edge, causing built-up edge. This phenomenon can be reduced or even eliminated, by efficient cooling of the cutting edge.

In grooving and parting applications, there is a problem, that the chip prevents the coolant from reaching the cutting edge. The new **DGNC** inserts are an ideal solution, as they have a coolant hole through the insert with an outlet near the cutting edge.

The coolant reaches the cutting edge and the insert body is internally cooled. Materials such as titanium, inconel, or austenitic stainless steel tend to strain hardening during the cutting process and they form long and tangled chips. The efficient coolant supplied to the cutting zone decreases flank and cratering rates. This leads to substantially longer tool life and a better machined surface finish. The coolant supply can be attached directly to the **DGFH-C** blades used on the regular blocks, or through the **SGTBU-C** blocks which have coolant passages and connecting ports.

The **DGNC** insert is the best solution for grooving and parting on high temperature alloys and stainless steel.

INTRODUCTION

SUMO-GRIP
HEAVY DUTY LINE

**SUMO-GRIP System for
Heavy Duty Groove-Turn Applications**

ISCAR's single-ended insert for heavy grooving & turning applications is based on the very successful **TANG-GRIP** family.

Features

- Tangentially oriented pocket creates a very rigid and secure clamping.
- Very strong insert design enables machining at very high feed rates of up to 1.0 mm/rev.
- Free, unobstructed chip flow, since there is no upper jaw as in the other clamping systems.
- Combination of tangential clamping, strong design and free chip flow results in improved insert and tool life and higher feed rates, thus significantly increasing productivity.
- Recommended for machining large diameter parts and heavy interrupted cuts.

INTRODUCTION

INTRODUCTION

PENTACUT

PARTING GROOVING LINE

PENTA Insert for Economical Face Grooving and Recessing

- Multi-cornered with five cutting edges, which provides the most advantageous price per cutting edge.
- Fast edge indexing on the machine - from either side of the holder.

4 Applications in One System

- Precision grooving
- Parting
- Recessing - light side turning
- Chamfering
- Same insert for right- and left-hand cutting
- Width range 0.5 - 4.0 mm
- Unique, versatile chipformer
- The very rigid clamping system, produces excellent sidewall straightness surface quality and flat groove bottoms.

Useful for:

- A wide range of materials and machining conditions excellent machined surface quality.
- A combination of a very rigid clamping system and strong insert design enables machining at very high parameters.
- A variety of chipformers for wide range of materials and applications.

INTRODUCTION

MIN CUT MINI FACE LINE

Face Grooving and Turning Family for Dmin 8 mm

ISCAR's family for face grooving and turning in a diameter range of 8 to 17 mm for up to 5.5 mm grooving depth, covers the range between **ISCAR**'s **PICCO** and **CHAMGROOVE** tools.

Tool Features

- Can also be used for rotating applications.
- Internal coolant hole, directed to the cutting edge.
- Can be used for grooving in deep holes.
- Uninterrupted chip flow on the insert rake.

INTRODUCTION

CUT-GRIP

Multifunction Groove-Turn Tools for Increased Productivity and Profitability

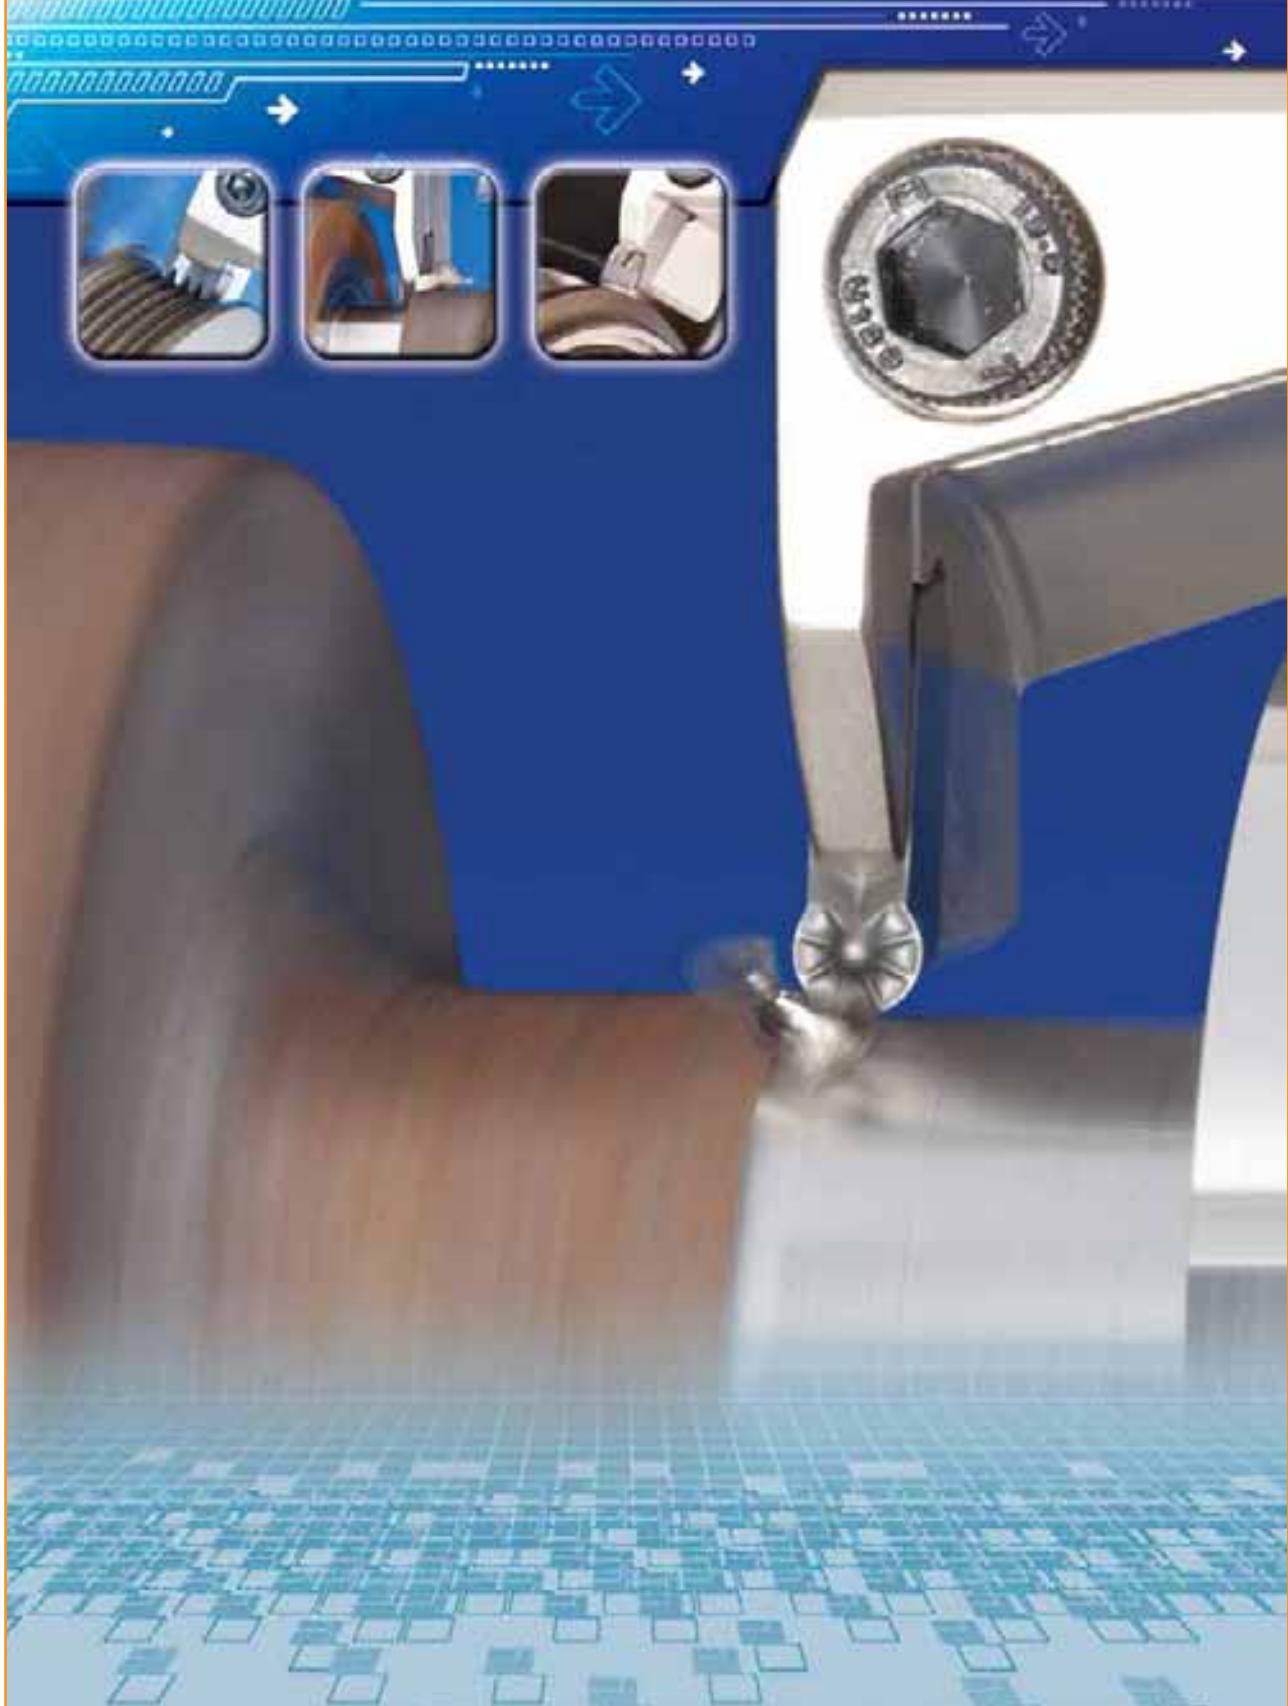

ISCAR's unique groove-turn tools are multifunction turning tools, able to operate in a sequence of grooving and turning modes. Moving from turning to grooving requires consideration of the basic **GRIP** principle, thereby eliminating the possibility of insert breakage. The **CUT-GRIP** line offers a diverse range of multifunction groove-turn tools for increased productivity and profitability.

A single **MODULAR-GRIP**, straight or perpendicular toolholder can be used for many applications, which will reduce tooling cost and stock.

CUT-GRIP **HELIFACE** **TOP-GRIP** **HELI-GRIP** **DO-GRIP** **PENTACUT**

USER GUIDE

B132

Necessary Information in Order to Select the Correct Insert

ISCAR has a huge variety of groove-turn products. In many cases your operation can be performed using several different products. In order to make the optimal selection, these basic parameters need to be defined:

- Insert width [W]
- Necessary tolerance on the insert
- Maximum depth of grooving [T max]
- If the application will require grooving and turning, or only grooving (E-Type or not)

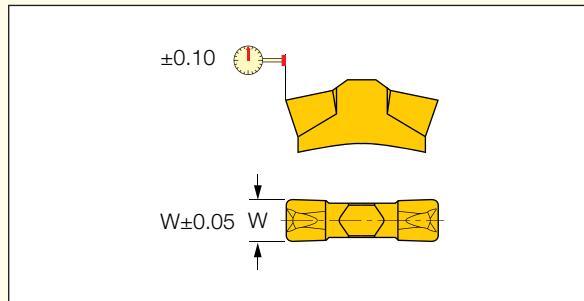

According to these parameters:

- Select the most suitable product according to the tables on pages B5-6
- Select the most suitable chipformer according to the information on pages B7-10

Utility Inserts

Pressed to Size Inserts

| | |
|---------------|------------|
| Width | ± 0.05 |
| Repeatability | ± 0.10 |

If you don't need the tight tolerance, save money and select a utility (less expensive) insert.

What is an E-type Groove-Turn Insert?

E-type inserts are precision ground grooving inserts with **turning** capability.

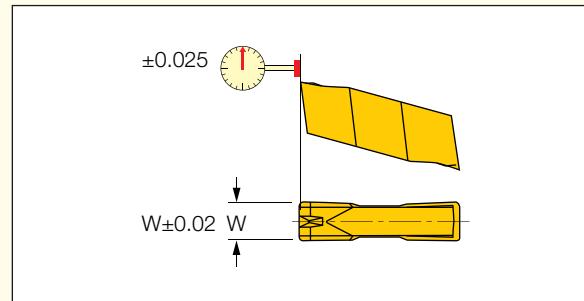

These inserts include the letter **E** in their description. (example: GIP 3.00E-0.4). This is to distinguish them from precision ground inserts which are not suitable for turning operations that don't include an **E** in their description. (example: GIP 3.00-0.2)

- E-type inserts usually have a larger corner radius
- E-type inserts have a larger honing size

Precision Grooving Inserts

Peripheral Ground Inserts

| | |

Chipbreaker Selection**General Use****P-Type**

- Very "open" geometry
- Medium to high feed in turning and grooving
- Large variety of standard sizes
- Precision ground inserts only
- Width range
External: 2.39 - 6.35 mm
Internal: 2.39 - 6.35 mm

**F-Type**

- First choice in grooving
- Low to medium feeds in grooving and turning
- Both precision ground and utility inserts
- Width range
External: 3.0 - 10 mm
Internal: 3 - 6 mm

**G-Type**

- Efficient chipbreaker for narrow width grooves
- Width range: 1 - 2.3 mm
- No option for turning

**Y-Type**

- General use in grooving and turning
- Positive top rake reduces cutting forces
- Excellent for long shafts
- Eliminates vibrations
- Both precision ground and utility inserts
- Width range
External: 8 - 20 mm

**HG-Y-Type**

- General use in grooving and turning
- Efficient for a wide range of materials and cutting conditions
- Utility inserts only
- Width range
External: 3 - 6.35 mm
Internal: 3 - 6.35 mm

Chipbreaker Selection**Problematic and Specific Materials****N-Type**

- First choice in grooving of problematic, soft & gummy materials
- Very low to medium feeds (from 0.05 mm/rev)
- Both precision ground and utility inserts
- Option for turning
- Width range
External: 3 - 8 mm
Internal: 3 - 5 mm

**M-Type**

- Unique chipbreaker with splitter
Chips are split into **3 segments**
- Efficient for problematic, soft & gummy materials
- Option for light turning
- Width - 8 mm

**A-Type**

- First choice for machining cast Iron
- Peripheral 15° T-land on a flat top
- Exerts high cutting forces, therefore suitable for stable conditions
- Precision ground inserts only
- Width range
External: 3 - 8 mm

**PA-Type**

- First choice for machining aluminum
- High positive rake
- Peripheral ground and polished top rake with a very sharp edge
- Suitable also for finish operations on titanium and heat resistant alloys
- Width range
External: 3 - 8 mm

**CW-Type**

- Unique chipformer for heavy-duty grooving
- Very wide chipbreaking range on carbon and alloy steel
- Width range 14 and 17 mm

Chipbreaker Selection**Profiling (Full radius)****Y-Type**

- First choice in profiling
- Positive top rake reduces cutting forces
- Excellent for long shafts
- Eliminates vibrations
- Both precision ground and utility inserts
- Width range
External: 3 - 12 mm

**YF-Type**

- First choice for profiling ductile materials
- Utility inserts only
- Width range
External: 3 - 8 mm

**PA-Type**

- First choice for profiling aluminum
- High positive rake
- Peripheral ground and polished top rake with a very sharp edge
- Suitable also for finish operations on titanium and heat resistant alloys
- Width range
External: 3 - 8 mm

**YZ-Type**

- First choice for profiling ductile aluminum
- Peripheral ground and polished top rake with a very sharp edge
- Width range
External: 3 - 8 mm

**H-Type**

- Unique chipbreaker for heavy-duty profiling
- Negative T-land for extra edge toughness
- Suitable for heavy interrupted cuts and cast iron machining
- Width - 12 mm

- DO-GRIP DGN, HGN inserts can be used for grooving only
- For user guide, see pages B132-145.

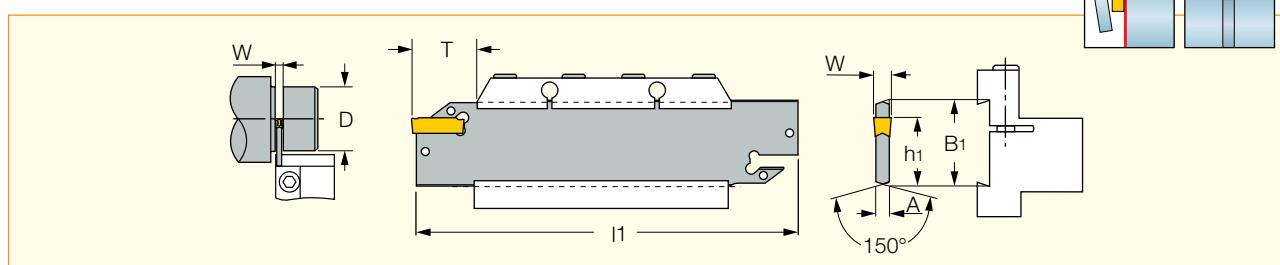

For inserts, see pages: GRIP (B14) • GRIP (Full Radius) (B14) • DGN/DGNC/DGNM-C (D24) • HGN-C (D30) • DGN/DGNM-J/J/S/JT (D25) • HGN-J (D30) • DGN-UT/UA (D27) • DGN-W (D25) • HGN-UT (D31).

For holders, see pages: MAHPR/L (B22) • MAHR/L (B22) • C#-MAHD (G7) • C#-MAHDOR (G5) • C#-MAHDR-45 (G4) • C#-MAHPD (G7) • C#-MAHUR/L (G5) • HSK A63WH-MAHDOR (G17) • HSK A63WH-MAHDR-45 (G16) • HSK A63WH-MAHUR/L (G17) • IM-MAHD (G26) • IM-MAHPD (G27) • IM63 XMZ MAHDOR (G24) • IM63 XMZ MAHDR-45 (G23) • IM63 XMZ MAHUR/L (G25)..

DO-GRIP • HELI-GRIP

HGFH

Parting and Grooving Blades for 3 mm GRIP Inserts

| Designation | B_1 | W | A | l_1 | h_1 | T_{blade} |
|------------------|-------|------|------|--------|-------|-------------|
| HGFH 26-3 | 26.0 | 3.00 | 2.40 | 110.00 | 21.4 | 37.5 |
| HGFH 32-3 | 32.0 | 3.00 | 2.40 | 150.00 | 24.8 | 50.0 |

For inserts, see pages: GRIP (B14) • GRIP (Full Radius) (B14) • HGN-C (D30) • HGR/L-C (D30) • HGN-J (D30) • HGN-UT (D31) • HGR/L-J/JS (D31).

For holders, see pages: C#-TBK-R/L (G6) • HSK A63WH-TBK-R/L (G18) • IM63 XMZ TBK (G25) • SGTBF (F4) • SGTBR/L (F3) • SGTBU/SGTBN (F2) • UBHCR/L (F4).

Spare Parts

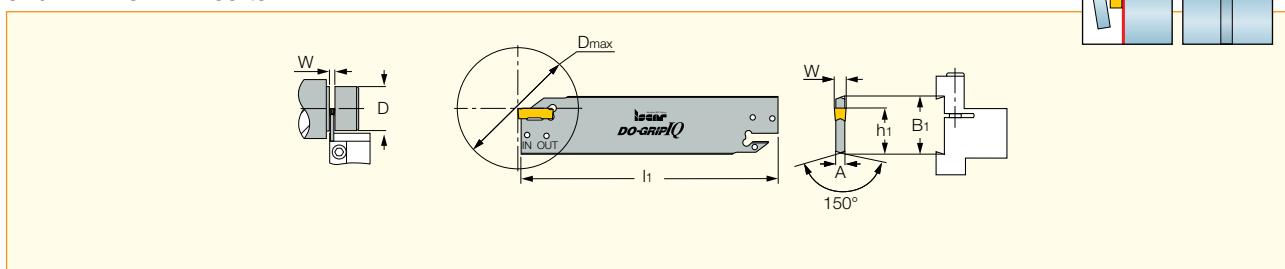

| Designation | Extractor |
|-------------|-----------|
| HGFH | EDG 23B* |

* Optional, should be ordered separately

DGFH

Parting and Grooving Blades with and without Coolant Holes for DO-GRIP and HELI-GRIP Inserts

| Designation | B ₁ | W _{min} | W _{max} | A | l ₁ | h ₁ | D _{max} | Inserts |

- Use the drilled holes on blade for min. and max. overhang
- When using a double-ended insert, grooving depth is limited by the insert.
- For user guide, see pages B132-145.

For inserts, see pages: TGMF (Full Radius) (B17) • TGMF/P (B17).

For holders, see pages: SGTBU/SGTBN (F2) • UBHCR/L (F4).

TGHN-S

Single-Ended Blades for Utility Grooving and Turning Inserts

| Designation | B ₁ | W _{min} | W _{max} | T.bl/min | T.blade | h ₁ | l ₁ | A | Inserts |
|-------------------|----------------|------------------|------------------|----------|---------|----------------|----------------|------|------------------|
| TGHN 32-3S | 32.0 | 3.00 | 3.00 | 10.0 | 18.0 | 24.8 | 48.30 | 2.40 | TGMF 3 |
| TGHN 32-4S | 32.0 | 4.00 | 5.00 | 12.0 | 21.0 | 24.8 | 49.50 | 3.20 | TGMF 4, TGMF/P 5 |
| TGHN 32-5S | 32.0 | 5.00 | 5.00 | 12.0 | 25.0 | 24.8 | 54.00 | 4.00 | TGMF/P 5 |
| TGHN 32-6S | 32.0 | 6.00 | 6.35 | 16.0 | 25.0 | 24.8 | 55.70 | 5.20 | TGMF 6 |

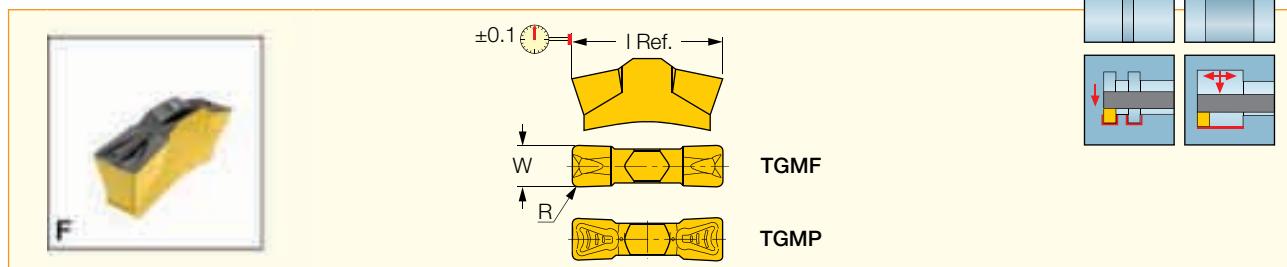

- Use the drilled holes on blade for min. and max. overhang
- When using a double-ended insert, grooving depth is limited by the insert.
- For user guide, see pages B132-145.

For inserts, see pages: TGMF (Full Radius) (B17) • TGMF/P (B17).

For holders, see pages: C#-TBU (G6) • IM-TBU (G26) • UBHCR/L (F4).

TGMF/P

Utility Double-Ended Inserts, for External and Internal Grooving and Turning

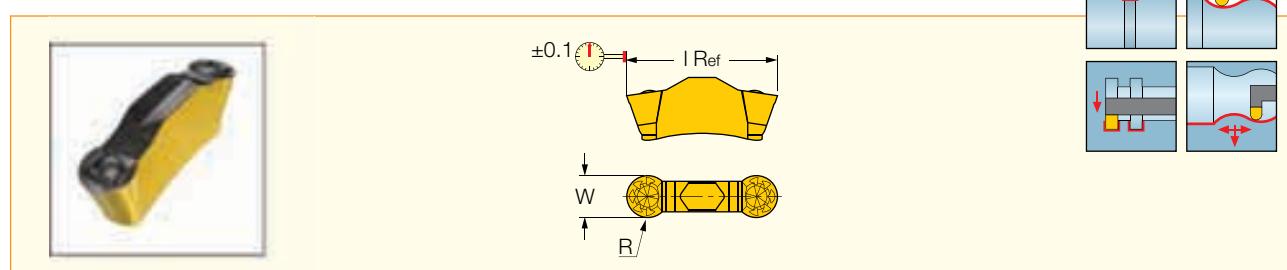

| Designation | Dimensions | | | | Tough ↔ Hard | | | | | Recommended Machining Data | | | |
|---------------------|--------------|--------------|-------|--------------------|--------------|--------|-------|------|-------|----------------------------|---------------------|-----------------|-------------------|
| | W ± 0.05 | R ± 0.05 | I | T _{max-r} | IC830 | IC8250 | IC808 | IC20 | IC428 | IC20N | a _p (mm) | f turn (mm/rev) | f groove (mm/rev) |

• Can cut arcs to 250° • Dmin for internal application=20.5 mm • For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: TGDR/L (B15) • TGHN 26-M (B92) • TGHN-D (B16) • TGHN-S (B16) • TGIR/L-C (B91) • TGPAD (B15).

GHMR/L

Toolholders for Shallow Radial and Axial Grooving with Narrow and Special Profile Inserts

Right-hand shown

| Designation | W_{max} | T_{max-r} | T_{max-a} | h | b | l_1 | l_2 | f | h_4 |
|--------------------------------------|-----------|-------------|-------------|------|------|--------|-------|------|-------|
| GHMR/L 12 | 4.00 | 4.80 | 4.80 | 12.0 | 12.0 | 110.00 | 25.0 | 10.8 | 4.0 |
| GHMR/L 16 | 4.80 | 4.80 | 4.80 | 16.0 | 16.0 | 115.00 | 25.0 | 14.5 | - |
| GHMR/L 16-3 ST ⁽¹⁾ | 5.00 | 4.80 | 4.80 | 16.0 | 16.0 | 78.00 | 25.0 | 15.0 | - |
| GHMR/L 20 | 6.40 | 4.80 | 4.80 | 20.0 | 20.0 | 125.00 | 25.0 | 18.5 | - |
| GHMR/L 25 | 6.40 | 4.80 | 4.80 | 25.0 | 25.0 | 140.00 | 25.0 | 23.5 | - |
| GHMR/L 32 | 6.40 | 4.80 | 4.80 | 32.0 | 32.0 | 150.00 | 25.0 | 30.2 | - |

- Use for recessing: light turning, small depth of cut ($ap=0.1-0.5$ mm) and small feed ($f=0.1$ mm/rev).
- For user guide, see pages B132-145.

⁽¹⁾ For Star and multi-spindle machines.

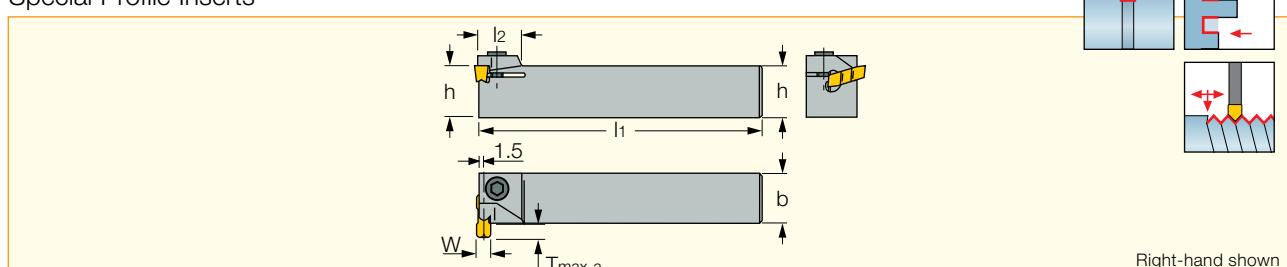

For inserts, see pages: B29-51 and for TIP threading inserts, see in ISCAR TURNING & THREADING TOOLS catalog.

Spare Parts

• For machining depth over 13 mm, a single-ended insert is required (GIM, GIMF, GIMY). Tmax for grooving depth depends on part diameter D. For grooving a part with a diameter larger than D_{max} , see next table. • For using TIP inserts, Toolholder seat needs to be modified according to insert profile to ensure clearance. • For user guide, see pages B132-145

⁽¹⁾ In the case of inserts with $W < 2$ mm, tool pocket should be ground to 0.3 mm thinner than the insert's grooving width. ⁽²⁾ For Star and multi-spindle machines.

⁽³⁾ Maximum parting diameter

For inserts, see pages: B29-51 and for TIP threading inserts, see in ISCAR full ISCAR TURNING & THREADING TOOLS catalog.

• For using TIP insert, toolholder seat needs to be modified according to insert profile to ensure clearance. • For user guide, see pages B132-145

For inserts: see pages B29-51 and for TIP threading inserts, see in ISCAR TURNING & THREADING TOOLS catalog.

CUT-GRIP

CGHN-S

External Machining Single-Ended Blades

| Designation | B_1 | W_{\min} | W_{\max} | $T_{bl\min}$ | T_{blade} | h_1 | l_1 | A |
|-------------------|-------|------------|------------|--------------|-------------|-------|-------|------|
| CGHN 32-3S | 32.0 | 2.80 | 4.00 | 10.0 | 19.0 | 24.8 | 51.00 | 2.40 |
| CGHN 32-4S | 32.0 | 3.50 | 5.00 | 12.0 | 21.0 | 24.8 | 53.00 | 3.20 |
| CGHN 32-5S | 32.0 | 4.40 | 6.40 | 12.0 | 25.0 | 24.8 | 56.00 | 4.00 |
| CGHN 32-6S | 32.0 | 5.50 | 6.40 | 12.0 | 25.0 | 24.8 | 56.00 | 5.20 |

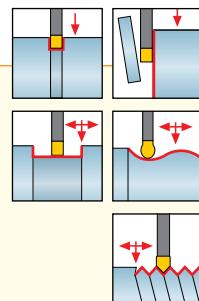

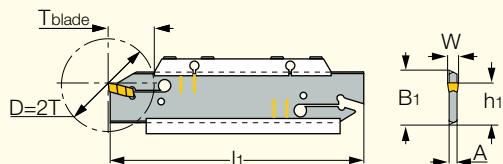

• When using a double-ended insert, grooving depth is limited by the insert. • For user guide, see pages B132-145.

For inserts, see pages: B29-51 and for TIP threading inserts, see in ISCAR TURNING & THREADING TOOLS catalog.

For holders, see pages: C#-TBU (G6) • IM-TBU (G26) • UBHCR/L (F4).

CGHN-D

Double-Ended Blades for External Grooving and Turning

| Designation | B ₁ | W _{min} | W _{max} | T _{bl} _{min} | T blade | h ₁ | l ₁ | A |
|-------------------|----------------|------------------|------------------|--------------------------------|---------|----------------|----------------|------|
| CGHN 26-3D | 26.0 | 2.80 | 4.00 | 10.0 | 15.0 | 21.4 | 110.00 | 2.40 |
| CGHN 26-4D | 26.0 | 3.50 | 4.50 | 10.0 | 15.0 | 21.4 | 110.00 | 3.20 |
| CGHN 26-5D | 26.0 | 4.40 | 6.40 | 10.0 | 20.0 | 21.4 | 110.00 | 4.00 |
| CGHN 32-3D | 32.0 | 2.80 | 4.00 | 10.0 | 19.0 | 24.8 | 150.00 | 2.40 |
| CGHN 32-4D | 32.0 | 3.50 | 5.00 | 12.0 | 21.0 | 24.8 | 150.00 | 3.20 |
| CGHN 32-5D | 32.0 | 4.40 | 6.40 | 12.0 | 26.0 | 24.8 | 150.00 | 4.00 |
| CGHN 32-6D | 32.0 | 5.50 | 6.40 | 12.0 | 26.0 | 24.8 | 150.00 | 5.20 |

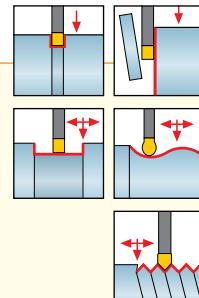

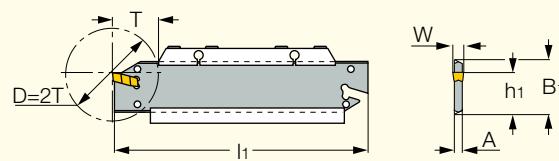

- Use the yellow lines on blade for min. and max. overhang.
- For using TIP inserts, toolholder seat needs to be modified according to insert profile to ensure clearance.
- When using a double-ended insert, grooving depth is limited by the insert.
- For user guide, see pages B132-145.

For inserts, see pages: B29-51 and for TIP threading inserts, see in ISCAR full ISCAR TURNING & THREADING TOOLS catalog.

For holders, see pages: SGTBU/SGTBN (F2) • UBHCR/L (F4).

CGHN-DG

Double-Ended Blades for External Grooving and Turning Self Clamped Inserts

| Designation | B ₁ | W _{min} | W _{max} | T _{turn} | T _{groove} | h ₁ | l ₁ | A |
|--------------------|----------------|------------------|------------------|-------------------|---------------------|----------------|----------------|------|
| CGHN 32-3DG | 32.0 | 2.80 | 4.00 | 25.0 | 50.0 | 24.8 | 150.00 | 2.40 |
| CGHN 32-4DG | 32.0 | 3.50 | 5.00 | 30.0 | 50.0 | 24.8 | 150.00 | 3.20 |
| CGHN 32-5DG | 32.0 | 4.40 | 6.40 | 33.0 | 60.0 | 24.8 | 150.00 | 4.00 |
| CGHN 32-6DG | 32.0 | 5.50 | 6.40 | 35.0 | 60.0 | 24.8 | 150.00 | 5.20 |

- DO-GRIP clamping insert is self-retained for long overhang.
- For using TIP inserts, toolholder seat needs to be modified according to insert profile to ensure clearance.
- When using a double-ended insert, grooving depth is limited by the insert.
- For user guide, see pages B132-145.

For inserts, see pages: B29-51 and for TIP threading inserts, see in ISCAR TURNING & THREADING TOOLS catalog.

For holders, see pages: C#-TBK-R/L (G6) • HSK A63WH-TBK-R/L (G18) • IM63 XMZ TBK (G25) • SGTBU/SGTBN (F2) • UBHCR/L (F4).

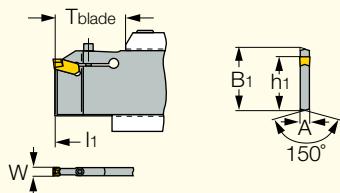

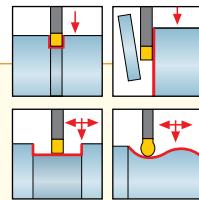

Spare Parts

| Designation | Extractor |
|----------------|-----------|
| CGHN-DG | EDG 44A* |

* Optional, should be ordered separately

CGHN-P8

Blades for Deep Grooving and Turning

| Designation | W | T blade | T _{max-r} | A | h ₁ | B ₁ | l ₁ |
|-----------------------|------|---------|--------------------|------|----------------|----------------|----------------|
| CGHN 52-P8 (1) | 8.00 | 50.0 | 43.00 | 7.40 | 45.0 | 52.6 | 190.00 |
| CGHN 53-P8 (2) | 8.00 | 70.0 | 63.00 | 7.40 | 45.0 | 52.6 | 260.00 |

• For user guide, see pages B132-145.

(1) If D (workpiece) is smaller than 200 mm, then T_{max}=48, if D (workpiece) is larger than 200 mm, then T_{max}=43. (2) If D (workpiece) is smaller than 200 mm, then T_{max}=68, if D (workpiece) is larger than 200 mm, then T_{max}=63.

For inserts, see pages: GIMF (B29) • GIMM 8CC (E46) • GIMY (B30) • GIMY (Full Radius) (B32) • GIMY-F (B34) • GIPY (B46).

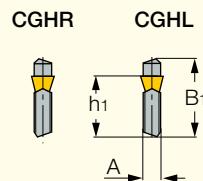

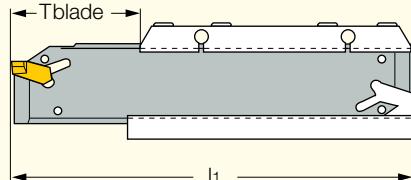

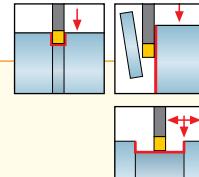

For holders, see pages: SGTBK (F3) • SGTBU/SGTBN (F2).

Spare Parts

| Designation | Screw | Key |
|----------------|------------|--------|
| CGHN-P8 | SR 76-1637 | HW 4.0 |

CGHR/L-P8DG

Double-Ended, Heavy Duty, Self Clamped Grooving and Turning Blades

| Designation | W | T blade | A | h ₁ | B ₁ | l ₁ |
|-----------------------|------|---------|------|----------------|----------------|----------------|
| CGHR/L 32-P8DG | 8.00 | 40.0 | 6.80 | 24.8 | 32.0 | 150.00 |

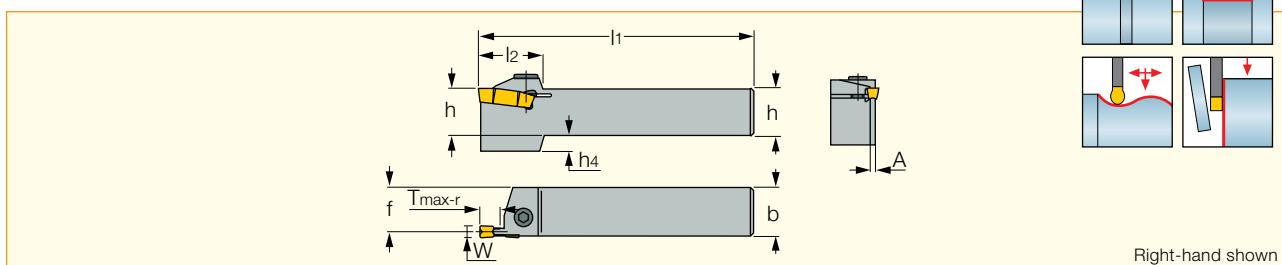

• For user guide, see pages B132-145.

For inserts, see pages: GIMF (B29) • GIMM 8CC (E46) • GIMY (B30) • GIMY (Full Radius) (B32) • GIMY-F (B34).

For holders, see pages: C#-TBK-R/L (G6) • HSK A63WH-TBK-R/L (G18) • IM63 XMZ TBK (G25) • SGTBK (F3) • SGTBU/SGTBN (F2).

• For user guide, see pages B132-145.

For inserts, see pages: GDMA (B47) • GDMF (B29) • GDMM-CC (E46) • GDMN (B31) • GDMU (B31) • GDMLY (B30) • GDMLY (Full Radius) (B33) • GDMLY-F (B34) • GIA-K (Long Pocket) (B44) • GIE-E ($W=8,10$ Full Radius) (B38) • GIE-E ($W=8,10$) (B35) • GIPA 8-35V (V Shape) (C12) • GIPA/GIDA 8 (Full Radius) (B48).

For holders, see pages: C#-GHAD-8 (G8) • C#-GHAPR/L-8 (G8) • GHAPR/L-8 (B27) • GHAR/L-8 (B27) • IM-GHAD-8 (G27) • IM-GHAPR/L-8 (G28).

CGHN-8-10D

Heavy Duty, Deep Grooving and Turning Blades

| Designation | W_{min} | W_{max} | $T_{blade}^{(1)}$ | A | h_1 | B_1 | l_1 |
|--------------------|-----------|-----------|-------------------|------|-------|-------|--------|
| CGHN 52-8D | 8.00 | 8.30 | 50.0 | 7.40 | 45.0 | 52.6 | 190.00 |
| CGHN 53-8D | 8.00 | 8.30 | 70.0 | 7.40 | 45.0 | 52.6 | 260.00 |
| CGHN 52-10D | 10.00 | 11.00 | 70.0 | 9.20 | 45.0 | 52.6 | 190.00 |
| CGHN 53-10D | 10.00 | 11.00 | 100.0 | 9.20 | 45.0 | 52.6 | 260.00 |

• For user guide, see pages B132-145.

⁽¹⁾ When using a double-ended insert, grooving depth is limited by the insert.

For inserts, see pages: GDMF (B29) • GDMN (B31) • GDMU (B31) • GDMLY (B30) • GDMLY (Full Radius) (B33) • GDMLY-F (B34) • GDPY (B36) • GIE-E ($W=8,10$ Full Radius) (B38) • GIE-E ($W=8,10$) (B35) • GIPA 8-35V (V Shape) (C12) • GIPA/GIDA 8 (Full Radius) (B48).

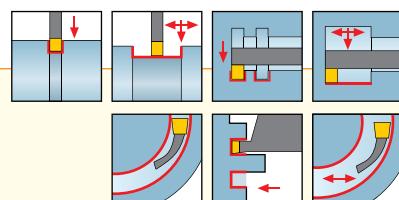

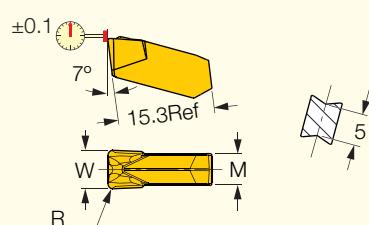

For holders, see pages: SGTBK (F3) • SGTBU/SGTBN (F2).

| GIMN 508 | 5.00 | 0.80 | 4.1 | ● | ● | 1.00-2.00 | 0.15-0.25 | 0.06-0.18 |
| GIMN 608 | 6.00 | 0.80 | 5.0 | | ● | 1.00-2.40 | 0.18-0.30 | 0.07-0.22 |

• Dmin for internal applications = 70 mm • For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: C#-GHDR/L (G11) • CGHN 26-M (B95) • CGHN 32-DGM (B97) • CGHN 32-M (B96) • CGHN-D (B24) • CGHN-DG (B24) • CGHN-S (B23) • CGPAD (B23) • GHDR/L (Short Pocket) (B19) • GHDR/L-JHP (Short Pocket) (B20) • GHGR/L (B21) • GHMPRL (B18) • GHMR/L (B18).

GDMN

Utility Double-Ended Inserts for Turning and Grooving Ductile Materials

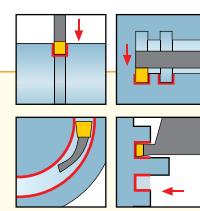

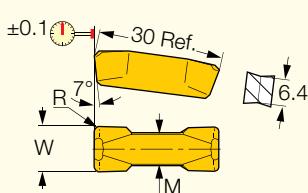

| Designation | Dimensions | | | | Tough ↔ Hard | | Recommended Machining Data | | | | |
|-----------------|--------------|--------------|-------------|-----|--------------|--------|----------------------------|-------|------------|---------------------|-----------------------|
| | $W \pm 0.05$ | $R \pm 0.05$ | T_{max-r} | M | IC830 | IC8250 | IC808 | IC907 | a_p (mm) | f_{turn} (mm/rev) | f_{groove} (mm/rev) |
| GDMN 808 | 8.00 | 0.80 | 27.00 | 6.0 | ● | ● | ● | ● | 1.00-3.20 | 0.20-0.35 | 0.10-0.30 |

• Dmin for internal machining = 65 mm • For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: C#-GHDR/L (G11) • CGHN-8-10D (B28) • GADR/L-8 (B28) • GAEG-R/L-8 (E42) • GHDR/L (Long Pocket) (B26) • GHDR/L-JHP (Long Pocket) (B26) • GHFGR/L-8 (E40) • GHIR/L (W=7.0-8.3) (B93).

GDMU

Utility Inserts for Heavy Grooving on Ductile Materials

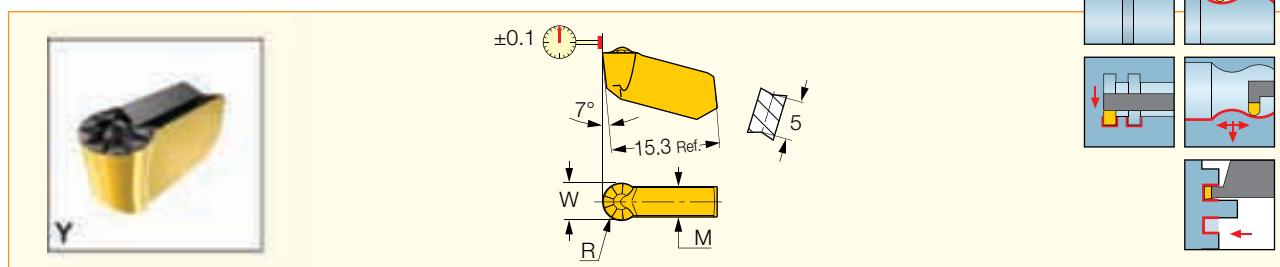

| Designation | Dimensions | | | | Tough ↔ Hard | | Recommended Machining Data | |
|-----------------|--------------|--------------|-----|-------|--------------|-----------------------|----------------------------|--|
| | $W \pm 0.05$ | $R \pm 0.05$ | M | IC830 | IC8250 | f_{groove} (mm/rev) | | |
| GDMU 808 | 8.00 | 0.80 | 6.0 | ● | ● | 0.10-0.24 | | |

• For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: C#-GHDR/L (G11) • CGHN-8-10D (B28) • GADR/L-8 (B28) • GAEG-R/L-8 (E42) • GHDR/L (Long Pocket) (B26) • GHDR/L-JHP (Long Pocket) (B26) • GHFGR/L-8 (E40) • GHIR/L (W=7.0-8.3) (B93).

GIMY (Full Radius)

Utility Single-Ended Inserts, for Grooving and Profiling

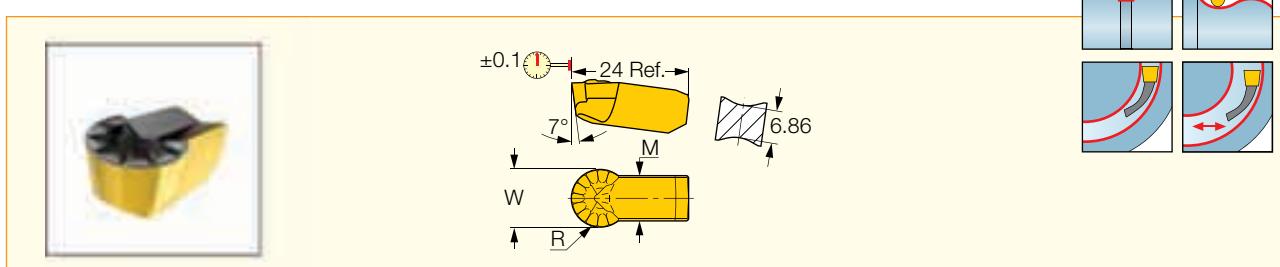

| Designation | Dimensions | | | Tough \leftrightarrow Hard | | | | | Recommended Machining Data | | | |
|---------------------|--------------|--------------|-----|------------------------------|--------|-------|------|-------|----------------------------|------------|---------------------|-----------------------|
| | $W \pm 0.05$ | $R \pm 0.05$ | M | IC830 | IC8250 | IC808 | IC20 | IC806 | IC20N | a_p (mm) | f_{turn} (mm/rev) | f_{groove} (mm/rev) |
| GIMY 315 | 3.00 | 1.50 | 2.4 | ● | ● | ● | ● | ● | ● | 0.00-1.50 | 0.18-0.26 | 0.07-0.13 |
| GIMY 420 | 4.00 | 2.00 | 3.2 | ● | ● | ● | ● | ● | ● | 0.00-2.00 | 0.20-0.28 | 0.09-0.17 |
| GIMY 525 | 5.00 | 2.50 | 3.9 | ● | ● | ● | ● | ● | ● | 0.00-2.50 | 0.23-0.42 | 0.11-0.21 |
| GIMY 630 | 6.00 | 3.00 | 5.0 | ● | ● | ● | ● | ● | ● | 0.00-3.00 | 0.24-0.50 | 0.13-0.25 |
| GIMY 635-318 | 6.35 | 3.18 | 5.1 | ● | ● | ● | ● | ● | | 0.00-3.10 | 0.25-0.53 | 0.14-0.27 |

- Dmin for internal application=70 mm
- Can cut arcs to 250°
- For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: C#-GHDR/L (G11) • CGFG 51-P8 (E42) • CGHN 26-M (B95) • CGHN 32-DGM (B97) • CGHN 32-M (B96) • CGHN-D (B24) • CGHN-DG (B24) • CGHN-P8 (B25) • CGHN-S (B23) • CGHR/L-P8DG (B25) • CGPAD (B23) • GHDR/L (Short Pocket) (B19) • GHDR/L-JHP (Short Pocket) (B20) • GHGR/L (B21) • GHMPR/L (B18) • GHMR/L (B18) • GHSR/L (B104).

GIMY 1260

Utility Single-Ended Inserts, for External Grooving and Profiling

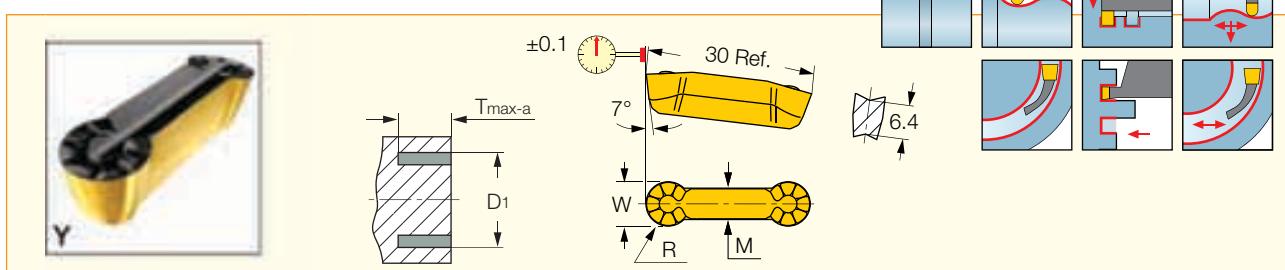

| Designation | Dimensions | | | Tough \leftrightarrow Hard | | | | Recommended Machining Data | | |
|------------------|--------------|--------------|-----|------------------------------|--------|-------|------|----------------------------|---------------------|-----------------------|
| | $W \pm 0.05$ | $R \pm 0.05$ | M | IC830 | IC8250 | IC808 | IC20 | a_p (mm) | f_{turn} (mm/rev) | f_{groove} (mm/rev) |
| GIMY 1260 | 12.00 | 6.00 | 9.5 | ● | ● | ● | ● | 0.00-6.00 | 0.42-0.86 | 0.26-0.45 |

- Toolholder seat needs to be modified according to insert profile to ensure clearance.
- For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: CGHR/L-12-14D (B69) • GHDR/L/N 12/14 (B68).

GDMY (Full Radius)

Utility Double-Ended Full Radius Inserts for Grooving and Profiling

| Designation | Dimensions | | | | | Tough ↔ Hard | | | | | | | Recommended Machining Data | | |
|-----------------|--------------|--------------|-----|-------------------|--------------|--------------|--------|-------|------|-------|--------|-------|----------------------------|-------------------------------|---------------------------------|
| | $W \pm 0.05$ | $R \pm 0.05$ | M | $D_1 \text{ min}$ | $T_{\max-r}$ | IC830 | IC8250 | IC808 | IC20 | IC428 | IC5010 | IC806 | a_p (mm) | f_{turn} (mm/rev) | f_{groove} (mm/rev) |
| GDMY 840 | 8.00 | 4.00 | 5.6 | 50.0 | 25.00 | ● | ● | ● | ● | ● | ● | ● | 0.00-4.00 | 0.32-0.67 | 0.18-0.34 |

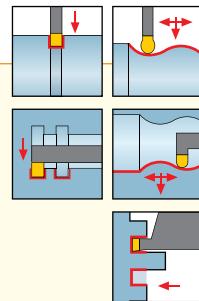

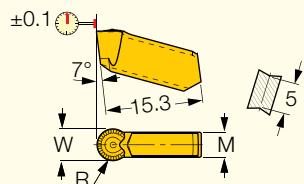

- Can cut arcs to 250°
- Dmin for internal machining = 65 mm
- For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: C#-GHDR/L (G11) • CGHN-8-10D (B28) • GADR/L-8 (B28) • GAFG-R/L-8 (E42) • GHDKR/L (C10) • GHDR/L (Long Pocket) (B26) • GHDR/L-JHP (Long Pocket) (B26) • GHFG-R/L-8 (E39) • GHFGR/L-8 (E40) • GHIR/L ($W=7.0-8.3$) (B93).

GIMY-F

Utility Single-Ended Inserts, for Grooving and Profiling Ductile Materials

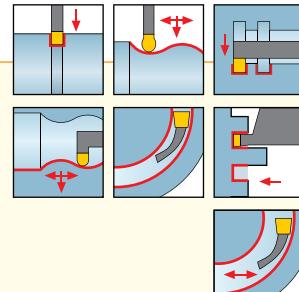

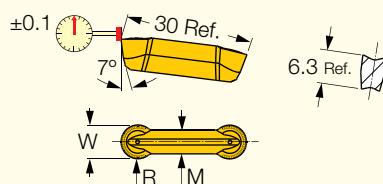

| Designation | Dimensions | | | Tough Hard | | | | Recommended Machining Data | | |
|------------------|--------------|--------------|-----|-------------|-------|-------|-------|----------------------------|--------------------|----------------------|

• Toolholder seat needs to be modified according to insert profile to ensure clearance. • For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: GHMPRL (B18) • GHMR/L (B18).

GHMUR/L

External Holders for 45° Undercutting

Right-hand shown

| Designation | W_{max} | h | b | l_1 | l_2 | f |
|-------------------|-----------|------|------|--------|-------|------|
| GHMUR/L 16 | 4.80 | 16.0 | 16.0 | 112.00 | 25.0 | 19.0 |
| GHMUR/L 20 | 6.40 | 20.0 | 20.0 | 122.00 | 25.0 | 23.0 |
| GHMUR/L 25 | 6.40 | 25.0 | 25.0 | 137.00 | 25.0 | 28.0 |

• For D>100 mm, GIP/GIF inserts can be used (clearance types UN, D or G are not required).

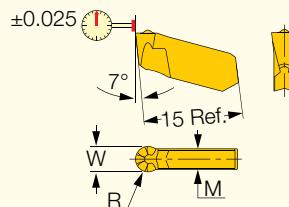

For inserts, see pages: GIMY-UN (B49) • GIP-UN (B50).

Spare Parts

| Designation | Screw | Key |
|-------------------|---------------------|--------|
| GHMUR/L 16 | SR M6X16DIN912 | HW 5.0 |
| GHMUR/L 20 | SR M6X20DIN912 | HW 5.0 |
| GHMUR/L 25 | SR M6X25DIN912 UNB. | HW 5.0 |

GIMY-UN

Utility Single-Ended Inserts for External Undercutting

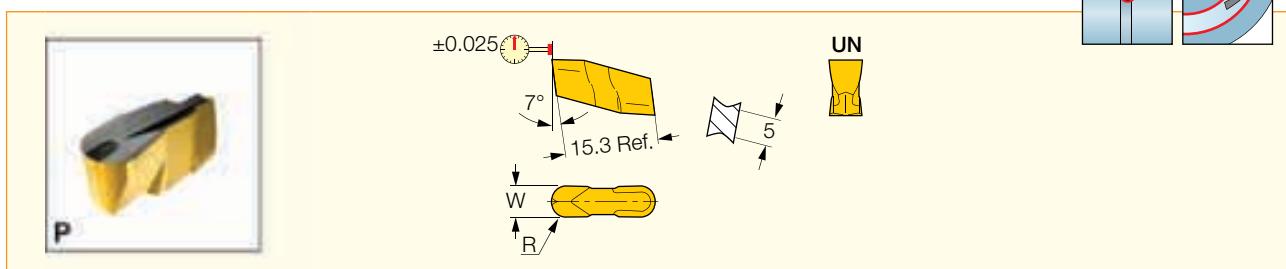

| Designation | Dimensions | | | | | IC8250 | Recommended Machining Data f groove (mm/rev) |
|--------------------|--------------|--------------|-----|-------------|---|--------|---|
| | $W \pm 0.05$ | $R \pm 0.05$ | M | T_{max-r} | | | |
| GIMY 315-UN | 3.00 | 1.50 | 2.4 | 2.00 | ● | | 0.05-0.15 |
| GIMY 420-UN | 4.00 | 2.00 | 3.2 | 2.50 | ● | | 0.05-0.15 |

• For 45° undercutting on D 100 mm, regular GIMY inserts may be used. • For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: GHMUR/L (B49).

GIP-UN

Precision Double-Ended Inserts for External Undercutting

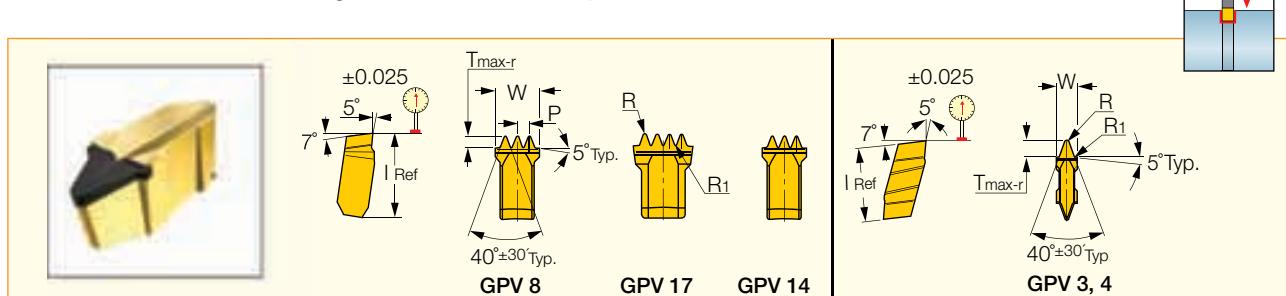

| Designation | Dimensions | | | | | Tough ↔ Hard | | | | Recommended Machining Data |
|------------------------|------------|---------|------------------|-----|--------------------|--------------|--------|-------|------|----------------------------|
| | W ±0.05 | R ±0.05 | D _{min} | M | T _{max-r} | IC830 | IC8250 | IC808 | IC20 | |
| GIP 3.00-1.50UN | 3.00 | 1.50 | 35.00 | 2.4 | 4.00 | ● | ● | ● | ● | 0.05-0.15 |
| GIP 4.00-2.0UN | 4.00 | 2.00 | 35.00 | 3.2 | 4.00 | | ● | | ● | 0.05-0.15 |

• Not recommended for turning. • For undercutting at 45° and D100 mm, other GIP inserts apply as well. • For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: C#-GHDR/L (G11) • CGHN-DG (B24) • CGPAD (B23) • GHDR/L (Short Pocket) (B19) • GHDR/L-JHP (Short Pocket) (B20) • GHMPR/L (B18) • GHMR/L (B18) • GHMUR/L (B49).

GPV

Precision Inserts for Grooving Multi V-Ribbed Pulleys

- Cutting edge with high positive rake, suitable for parting of tubes, thin walled parts and for small diameters
- Suitable for machining soft materials and bearing steel at low to medium feeds
- For cutting speed recommendations and user guide, see pages B134-136.

⁽¹⁾ For grooving and parting depth relative to part diameter, see below.

For tools, see pages: PCADR/L (B55) • PCHBR/L (B56) • PCHPR/L (B55) • PCHR/L-24 (B54).

| W ±0.02 | T _{max} ⁽³⁾ | T _{max} / D _{max} | D _{max} as a Function of Parting / Grooving Depth (T) for PENTA 24 Inserts | | | | | | | |

• For D min & T max refer to GEAIR/L & GAI/L adapters.

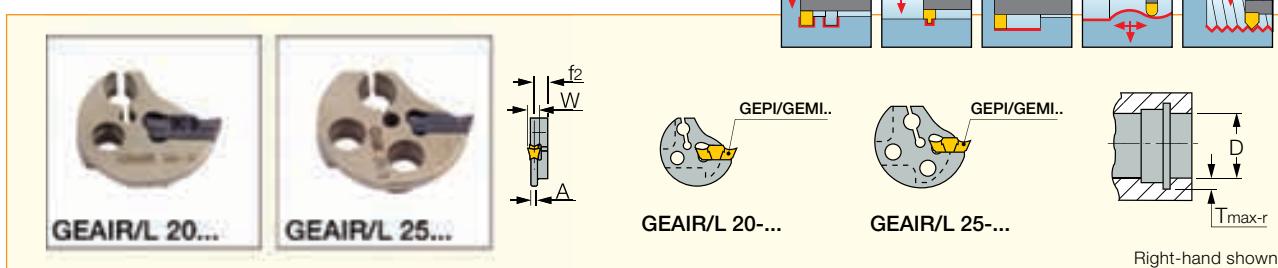

For tools, see pages: GEAIR/L (B76).

Spare Parts

| Designation | Screw | Key | Seal |
|------------------------|-------------|--------|-------|
| GHAIR/L 20SC-20 | SR 76-2057 | T-8/5 | PL 20 |
| GHAIR/L 25SC-25 | SR 16-236 P | T-15/5 | PL 25 |

GEAR/L

Internal Grooving and Turning Adapters

| Designation | D_{min} | W_{min} | W_{max} | T_{max-r} | f_2 | A |
|---------------------|-----------|-----------|-----------|-------------|-------|------|
| GEAIR/L 20-2 | 20.00 | 1.90 | 2.40 | 3.00 | 3.40 | 1.60 |
| GEAIR/L 20-3 | 20.00 | 2.40 | 3.00 | 3.00 | 3.60 | 2.00 |
| GEAIR/L 20-4 | 20.00 | 3.00 | 4.00 | 3.00 | 3.90 | 2.50 |
| GEAIR/L 25-2 | 25.00 | 1.90 | 2.40 | 4.00 | 3.40 | 1.60 |
| GEAIR/L 25-3 | 25.00 | 2.40 | 3.00 | 4.00 | 3.60 | 2.00 |
| GEAIR/L 25-4 | 25.00 | 3.00 | 4.00 | 4.00 | 3.90 | 2.50 |

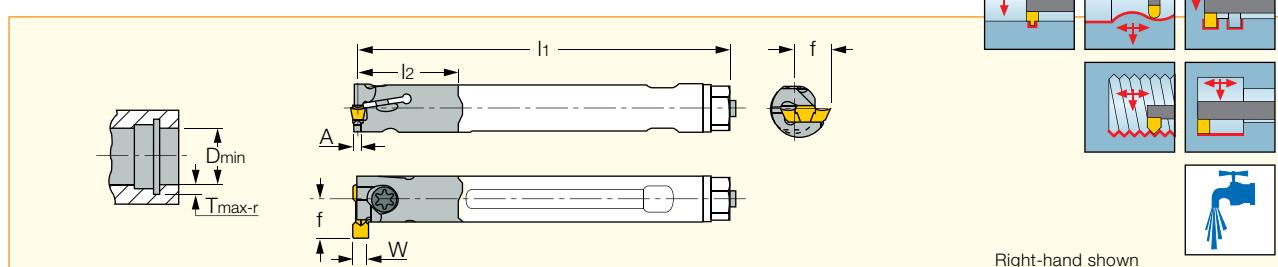

• For using TIPI insert, toolholder seat needs to be modified according to insert profile, to ensure clearance. • For user guide, see pages B132-145.

For inserts, see pages: GEMI (B77) • GEPI (B78) • GEPI (Full Radius) (B78) • For GEPI threading inserts, see ISCAR TURNING & THREADING TOOLS catalog.

For holders, see pages: GHAIL/L-GE (B75) • GHAIL/L-SC-GE (B75).

E-GEHIR / E-GHIMR

Interchangeable Heads for Internal Grooving and Turning

| Designation | W_{min} | W_{max} | D_{min} | T_{max-r} | l_1 | l_2 | f | A | Inserts |
|-----------------------|-----------|-----------|-----------|-------------|--------|-------|------|------|-------------------------|

- f and F1 are the blade extension range
- Grooving depth (T_{max-r}) varies in conformance with blade's overhang (F1) and it depends on the bore diameter(D).
- For grooving capacity, see chart below.
- For using TIPI inserts, toolholder seat needs to be modified according to insert profile, to ensure clearance.
- For user guide, see pages B132-145.

(1) Adjustable extension (2) Adjustable extension

For inserts, see pages: GIFI (B89) • GIFI-E (B86) • GIFI-E (Full Radius) (B86) • GIMIY (B85) • GINI-E (B87) • GIPI (B88) • GIPI (Full Radius) (B89) • GIPI-E (B85)
• TIPI threading inserts, see ISCAR TURNING & THREADING TOOLS catalog.

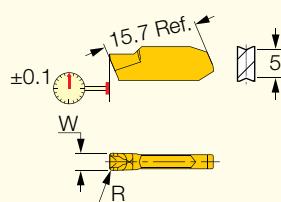

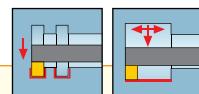

For holders, see pages: GHIC-50 (B83).

Internal Grooving Capacity for CGIN 26 for Bar GHIC...-50

Example:

For grooving depth T=12.7 mm,
and grooving width=4 mm,
in bore øD=60, use blade
CGIN 26A-4 and adjust
overhang to F1=16 mm.

GIMIY

Utility Single-Ended Inserts, for Internal Turning and Grooving

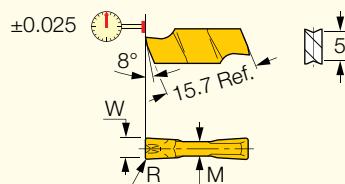

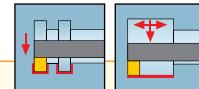

| Designation | Dimensions | | Tough ↔ Hard | | | Recommended Machining Data | | |
|------------------|------------|---------|--------------|------|-------|----------------------------|-----------------|-------------------|

- Grooving depth (Tmax-r) varies in conformance with blade's overhang (f and F₁) and it depends on the bore diameter (D).
- TGHN 26...-M can be modified from external double-sided TGHN blades
- For user guide, see pages B132-145.

(1) Adjustable extension (2) Adjustable extension

For inserts, see pages: TGMF (Full Radius) (B17) • TGMF/P (B17).

For holders, see pages: GHIC-70 (B94).

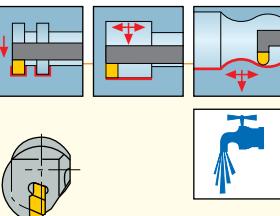

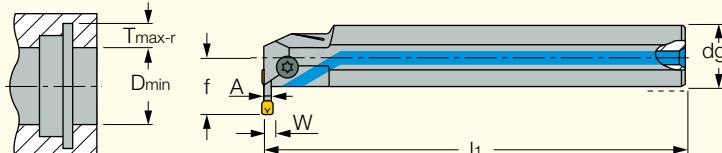

**Internal Grooving Capacity
for Bar GHIC...70**

Example:

For grooving depth T=15.5 mm,
and grooving width=5 mm,
in bore øD=100, use blade
CGHN 26-5M and adjust overhang to
F₁=18 mm.

TGHN 26...-M

• For both right and left hand applications.

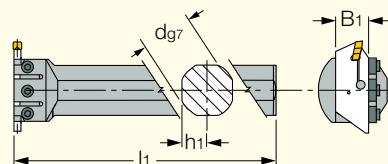

For tools, see pages: CGHN 26-M (B95) • TGHN 26-M (B92).

Spare Parts

| Designation | Screw | Key |
|----------------|----------------|--------|
| GHIC-70 | SR M6X16DIN912 | HW 5.0 |

GHIC-85

Boring Bars for Internal Grooving and Turning Blades Dmin=85 mm

| Designation | B ₁ | d | l ₁ | h ₁ |
|-------------------|----------------|-------|----------------|----------------|
| GHIC 40-85 | 32.0 | 40.00 | 260.00 | 18.0 |
| GHIC 50-85 | 32.0 | 50.00 | 300.00 | 23.0 |

• For both right and left hand applications.

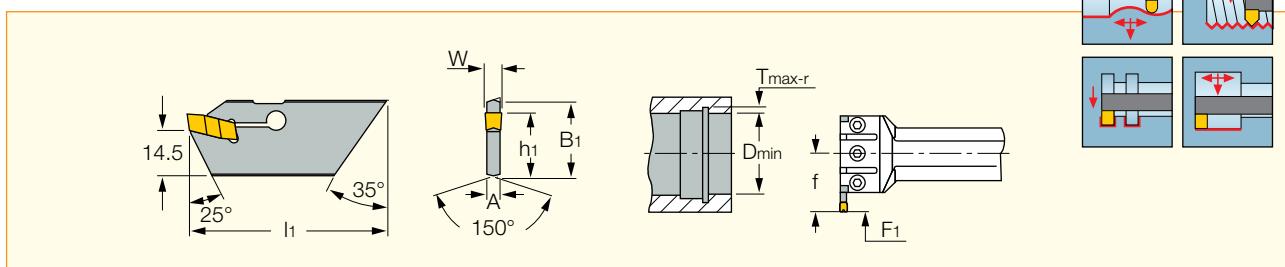

For tools, see pages: CGHN 32-DGM (B97) • CGHN 32-M (B96).

Spare Parts

| Designation | Screw | Key |
|----------------|----------------|--------|
| GHIC-85 | SR M6X16DIN912 | HW 5.0 |

CGHN 26-M

Internal Grooving and Turning Blades, for GHIC...-70 Bars

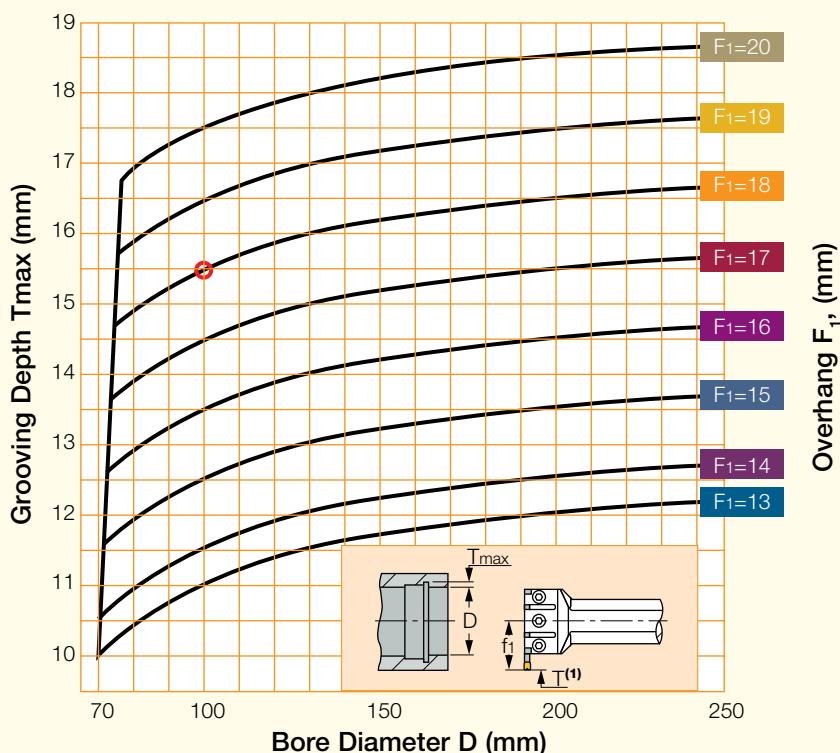

| Designation | W min | W max | A | D min | f _{min} ⁽¹⁾ | F _{1min} ⁽²⁾ | f _{max} ⁽²⁾ | F _{1max} ⁽²⁾ | h ₁ | l ₁ | B ₁ |
|-------------------|-------|-------|------|-------|---------------------------------|----------------------------------|---------------------------------|----------------------------------|----------------|----------------|----------------|
| CGHN 26-3M | 2.80 | 4.00 | 2.40 | 70.00 | 40.0 | 13.5 | 46.5 | 20.0 | 21.4 | 63.00 | 26.0 |
| CGHN 26-4M | 3.60 | 4.50 | 3.20 | 70.00 | 40.0 | 13.5 | 46.5 | 20.0 | 21.4 | 63.00 | 26.0 |
| CGHN 26-5M | 4.40 | 6.40 | 4.00 | 70.00 | 40.0 | 13.5 | 46.5 | 20.0 | 21.4 | 63.00 | 26.0 |

- Grooving depth (T_{max-r}) varies in conformance with blade's overhang (f and F_1) and it depends on the bore diameter (D). • CGHN 26...-M can be modified from external double-sided CGHN blades
- When TIP inserts are used, the seat needs to be modified to ensure clearance. • For user guide, see pages B132-145.

⁽¹⁾ Adjustable extension ⁽²⁾ Adjustable extension

For inserts, see pages: B29-51 and for TIP threading inserts, see in ISCAR TURNING & THREADING TOOLS catalog. For holders, see pages: GHIC-70 (B94).

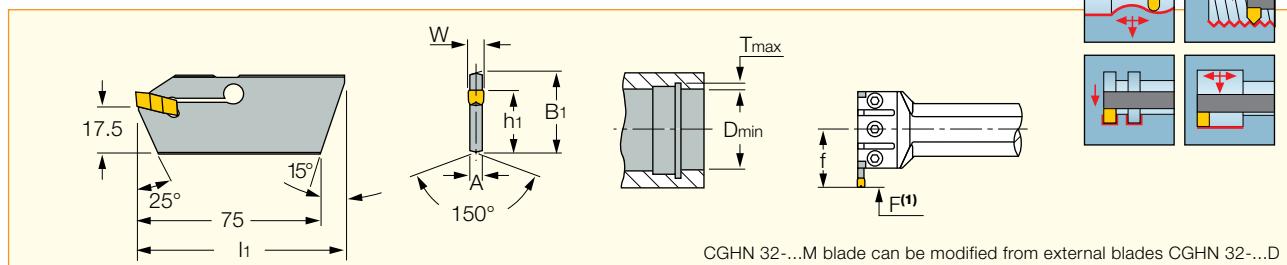

**Internal Grooving Capacity
for Bar GHIC...70**

Example:

For grooving depth $T=15.5$ mm,
and grooving width=5 mm,
in bore $\varnothing D=100$, use blade
CGHN 26-5M and adjust overhang to
 $F_1=18$ mm.

CGHN 26...-M

CGHN 32-M

Internal Grooving and Turning Blades, for GHIC...-85 Bars

CGHN 32-...M blade can be modified from external blades CGHN 32-...D

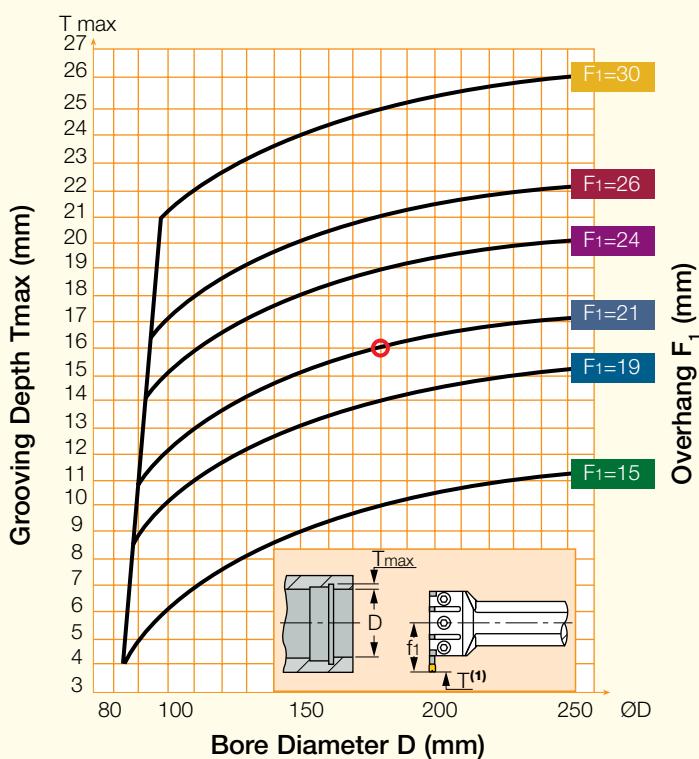

| Designation | W min | W max | A | f _{min} (^①) | F _{1min} (^②) | f _{max} (^②) | F _{1max} (^②) | h ₁ | l ₁ | B ₁ | D min |
|-------------------|-------|-------|------|-----------------------------------|------------------------------------|-----------------------------------|------------------------------------|----------------|----------------|----------------|-------|
| CGHN 32-3M | 2.80 | 4.00 | 2.40 | 44.0 | 15.0 | 48.0 | 19.0 | 24.8 | 82.00 | 32.0 | 85.00 |
| CGHN 32-4M | 3.60 | 5.00 | 3.20 | 44.0 | 15.0 | 50.0 | 21.0 | 24.8 | 82.00 | 32.0 | 85.00 |
| CGHN 32-5M | 4.40 | 6.40 | 4.00 | 44.0 | 15.0 | 55.0 | 26.0 | 24.8 | 82.00 | 32.0 | 85.00 |
| CGHN 32-6M | 5.60 | 6.40 | 5.20 | 44.0 | 15.0 | 55.0 | 26.0 | 24.8 | 82.00 | 32.0 | 85.00 |

- f and F1 are the blade extension range.
- Grooving depth (Tmax-r) varies in conformance with blade's overhang (F1) and it depends on the bore diameter (D).
- For grooving capacity, see graph.
- For using TIP insert, toolholder seat needs to be modified.
- For user guide, see pages B132-145.

(1) Adjustable extension (2) Adjustable extension

For inserts, see pages: B29-51 and for TIP threading inserts, see in ISCAR TURNING & THREADING TOOLS catalog.

For holders, see pages: GHIC-85 (B94).

**Internal Machining Grooving Capacity
for Bar GHIC...85**

Example:

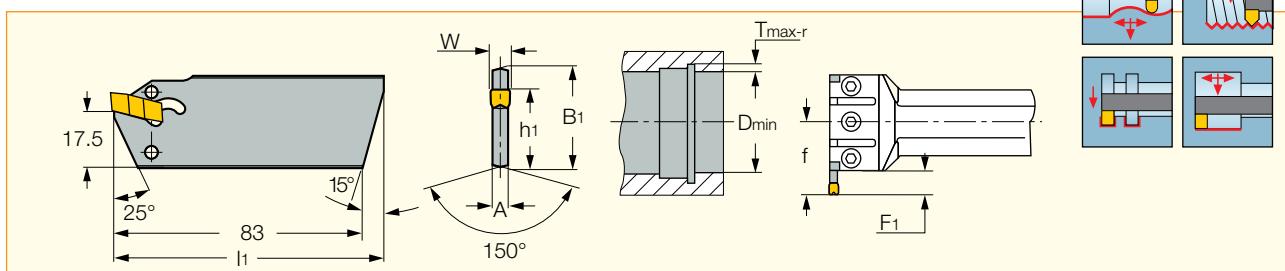

For grooving depth T=16,
and grooving width= 4,
in bore $\text{Ø}D=180$, use blade
CGHN-32-4M
and adjust overhang to
F1=21 mm.

TGHN 32-...M

CGHN 32-DGM

Internal Grooving and Turning Blades, for GHIC...-85 Bars (Self Clamping)

| Designation | W min | W max | A | f _{min} (1) | F _{1min} (2) | f _{max} (2) | F _{1max} (2) | h ₁ | l ₁ | B ₁ | D _{min} |
|---------------------|-------|-------|------|----------------------|-----------------------|----------------------|-----------------------|----------------|----------------|----------------|------------------|
| CGHN 32-3DGM | 2.80 | 4.00 | 2.40 | 53.0 | 24.0 | 59.0 | 30.0 | 24.8 | 90.00 | 32.0 | 93.00 |
| CGHN 32-4DGM | 3.50 | 5.00 | 3.20 | 53.0 | 24.0 | 59.0 | 30.0 | 24.8 | 90.00 | 32.0 | 93.00 |
| CGHN 32-5DGM | 4.40 | 6.40 | 4.00 | 53.0 | 24.0 | 59.0 | 30.0 | 24.8 | 90.00 | 32.0 | 98.00 |
| CGHN 32-6DGM | 5.60 | 6.40 | 5.20 | 53.0 | 24.0 | 59.0 | 30.0 | 24.8 | 90.00 | 32.0 | 98.00 |

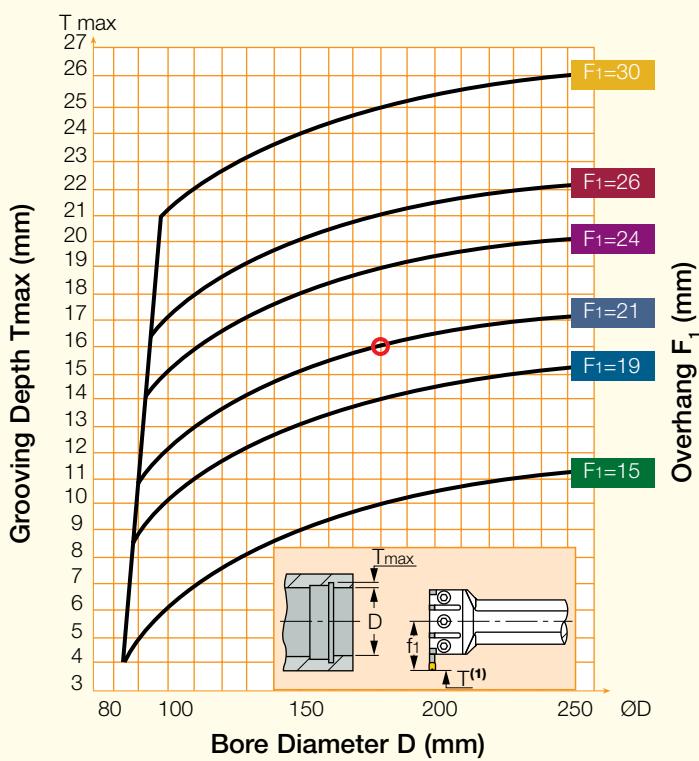

- Grooving depth (T_{max-r}) varies in conformance with blade's overhang (f and F_1) and it depends on the bore diameter (D). • CGHN 32...DGM can be modified from external double-sided CGHN -DG blades
- When TIP inserts are used, the seat needs to be modified to ensure clearance.
- For user guide, see pages B132-145.

(1) Adjustable extension (2) Adjustable extension

For inserts, see pages: B29-51 and for TIP threading inserts, see in ISCAR TURNING & THREADING TOOLS catalog.

For holders, see pages: GHIC-85 (B94).

Internal Machining Grooving Capacity for Bar GHIC...-85

Example:

For grooving depth $T=16$, and grooving width= 4, in bore $\varnothing D=180$, use blade CGHN-32-4M and adjust overhang to $F_1=21$ mm.

• T=Max depth capacity. see chart below. • For user guide, see pages B132-145.

(1) Limited by part diameter

For inserts, see pages: GDMW 2.4 (B53).

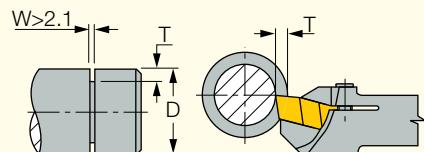

Spare Parts

| Designation | Screw | Key |
|---------------|-------------|--------|
| PHSR/L | SR 16-236 P | T-15/3 |

Grooving Depth

Grooving Depth Tmax per Diameter for Width > 2.1 mm

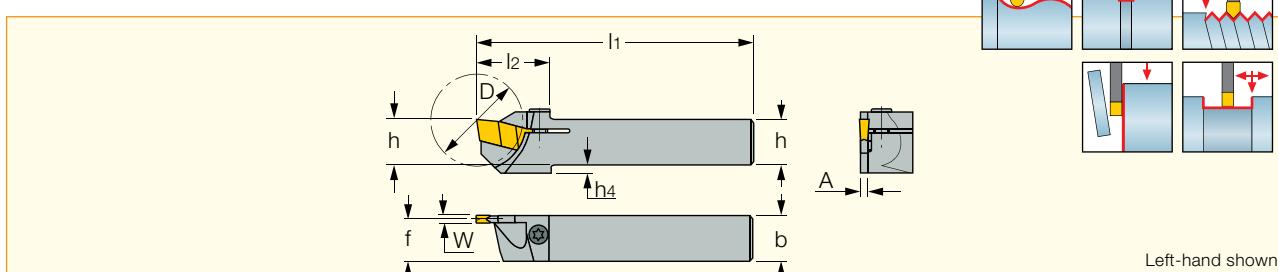

| | | | | | | | | | |
|-------------|------|------|------|------|------|-----|-----|-----|-----|
| Tmax | 5.0 | 4.5 | 4.0 | 3.5 | 3.0 | 2.5 | 2.3 | 2.0 | 1.7 |
| D | 10.5 | 10.8 | 11.5 | 12.6 | 14.5 | 17 | 20 | 25 | 34 |

Tmax is also limited by insert.

GHSR/L

External Machining Holders for Swiss Automatic Machines

Left-hand shown

| Designation | W_{\min} | W_{\max} | $D_{\max}^{(1)}$ | h | b | l_1 | f | l_2 | h_4 | A |
|--------------------|------------|------------|------------------|------|------|--------|------|-------|-------|------|
| GHSR/L 10-2 | 2.20 | 3.15 | 20.0 | 10.0 | 10.0 | 120.00 | 9.1 | 18.0 | 2.0 | 1.80 |
| GHSR/L 12-2 | 2.20 | 3.15 | 25.0 | 12.0 | 12.0 | 120.00 | 11.1 | 20.0 | 2.0 | 1.80 |
| GHSR/L 14-2 | 2.20 | 3.15 | 26.0 | 14.0 | 14.0 | 120.00 | 13.1 | 20.0 | - | 1.80 |
| GHSR/L 16-2 | 2.20 | 3.15 | 32.0 | 16.0 | 16.0 | 120.00 | 15.1 | 26.0 | - | 1.80 |

• For user guide, see pages B132-145.

(1) For $W > 2.1$ mm: grooving depth depends on part dia.

For inserts, see pages: GIG (B40) • GIM-J (D49) • GIM-J-RA/LA (D49) • GIMY (B30) • GIMY (Full Radius) (B32) • GIMY-F (B34) • GIP (B41) • GIP (Full Radius W<M) (B40) • GIP (Full Radius) (B42) • GIP-E (B36) • GIP-E (Full Radius) (B38) • GIPA (Full Radius W=3-6) (B47) • GIPA (W=3-6) (B46) • GIPM-A46 / GIP-1250 (B104) • GIPY (B46) • GITM (B45) • GITM (Full Radius) (B45) • TIP threading inserts, see ISCAR full ISCAR TURNING & THREADING TOOLS catalog.

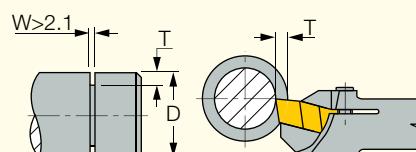

Spare Parts

What is a GRIP Insert?

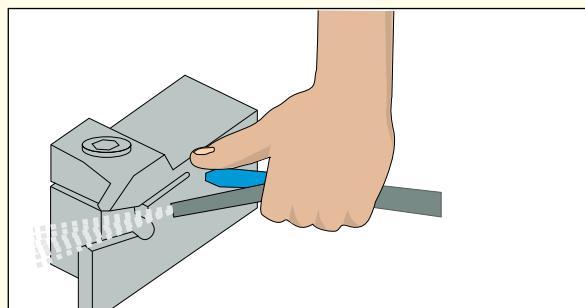

A GRIP insert is a grooving, groove-turn or parting insert that is clamped between 2 prisms.

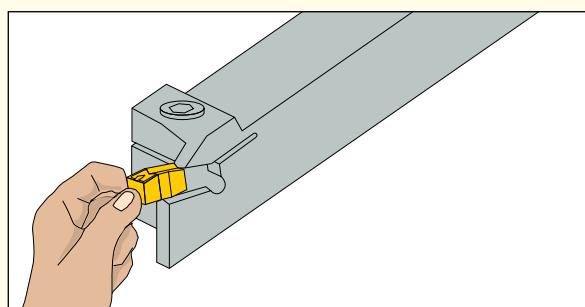

Clamping a GRIP Insert

Clamping an insert correctly in the holder is necessary for stable machining.

- Ensure that the seat is clean of dirt and swarf.

- In the first stage of clamping, ease the insert gently into place. Make sure that the prismatic surfaces match.

- Always use the wrench supplied together with the tool. Use reasonable force to the point of resistance for the final clamping.
The maximum recommended clamping torque is
 $1.5 \times d \text{ Nm}$ or $15 \times d \text{ Kgf} \times \text{cm}$.
 $d = \text{clamping screw dia. in mm.}$

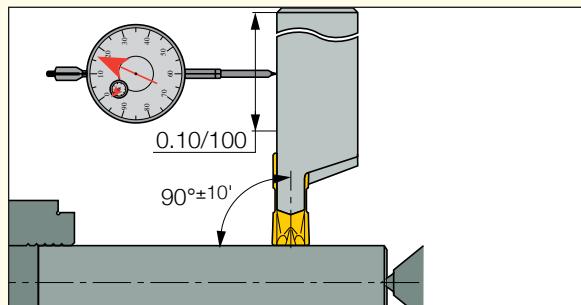

It is very important not to overtighten a GRIP insert, even though you may get the impression that the insert is more secure.

In fact, when overtightened, the insert is not clamped into its correct and carefully designed clamping points, it is actually less stable.

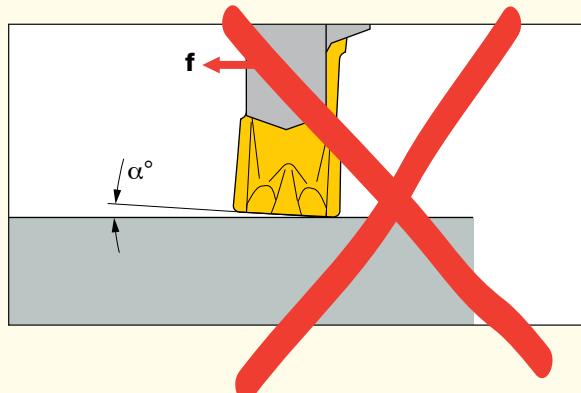

Positioning the Tool on the Turret

Successful machining can be achieved only if the tool is properly positioned on the turret. The following sequence should be followed:

- Position the GRIP holder perpendicular to the workpiece. Deviation may be 0.10/100 mm along the holder.
- Check to ensure that the frontal cutting edge is aligned parallel to the workpiece.

If the cutting edge is not parallel to the workpiece or is positioned as shown, the deflection during machining (in the indicated direction) will be too small and chatter may occur.

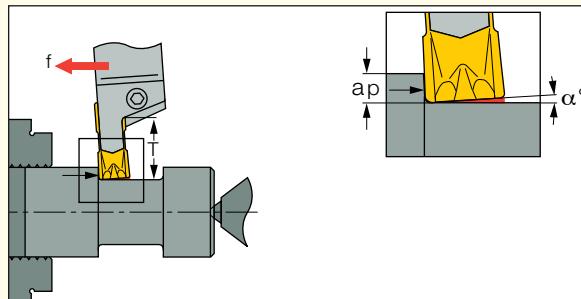

Principles of Turning with Groove-Turn Tools

The basic principle in turning with groove-turn tools is the deflection of the cutting tool, which results in a frontal clearance angle α° between the insert and the workpiece.

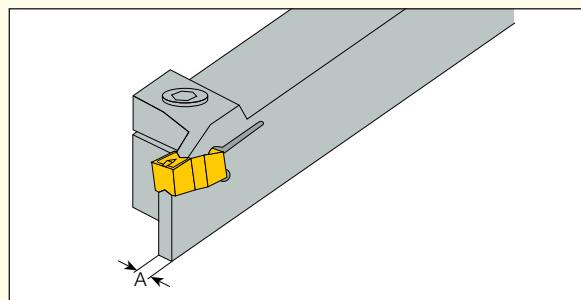

The clearance angle α° is a function of the side cutting forces and is not constant, as is the case with ISO inserts.

The deflection is influenced by the following factors:

Feed **f**
Depth of Cut **ap**
Overhang of Insert Support **T**
Width of Insert Support **A**
Cutting Speed **Vc**
Workpiece Material

When all of the above factors remain constant during turning, a high degree of accuracy with a tolerance up to ± 0.01 mm can be achieved.

If the conditions are too light (such as in a super finish operation), there may not be enough deflection and the clearance angle will be very small. This may result in chatter and vibration.

GROOVETURN USER GUIDE

** IC07 - First choice for machining titanium

Machining Tips

Insert width: Generally the insert width should be as wide as possible as it contributes to its strength. However, there are additional considerations that should be taken into account in order to choose the correct width:

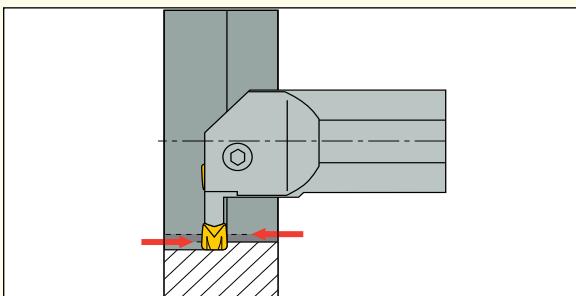

- **Workpiece size and clamping stability:** A larger width means higher cutting forces during grooving. A width that is too large can cause deformation of the workpiece and/or vibration.
- When using a larger width, make sure your machine has enough power. (See page B144)
- **Machining strategy:**
- Grooving in a correct sequence should also affect your choice. (see page B138)
- **Required overhang:** A larger tool overhang will require a wider insert to maintain stability.

- The larger the insert, the wider the upper and lower jaws can be, therefore, higher forces are required to effect the necessary side deflection.
- If the depth of cut is small, the width of the insert should be proportionately smaller in order to guarantee the required deflection.

Efficient use of insert's corners:

Always try to evenly split machining between the two corners. This optimization will increase the insert's life.

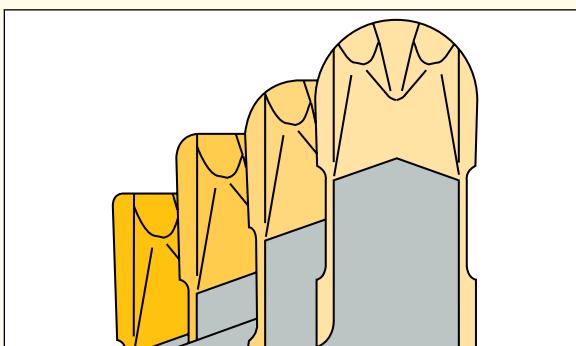

Insert Radius

Choosing the insert radius for a particular application is a combination of many factors. The corner radius of the groove-turn insert influences the product shape and tool life.

- A larger radius in turning operations normally improves surface quality.
- An insert with a larger radius has a better distribution of the cutting load and of the generated heat. It is stronger and ensures longer tool life.
- Small radii on GRIP inserts result in increased side forces and side deflection, preventing instability, especially with small depth of cut and feed.
- The best radius to use is basically determined by the geometry and dimensions of the workpiece. The more securely the workpiece is fastened in the machine tool, the larger the radius may be.

- When the ratio of a workpiece's length compared to its diameter is large, inserts with smaller radii will prevent chatter.
- A larger corner radius enables machining at a larger feed rate.
- In profiling operations, inserts with larger corner radii or full radii are required.

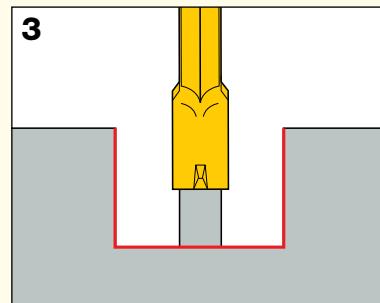

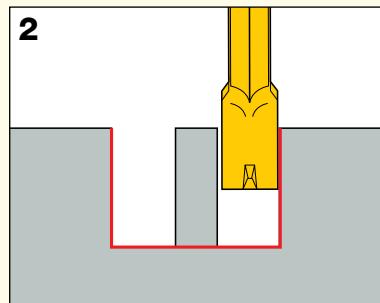

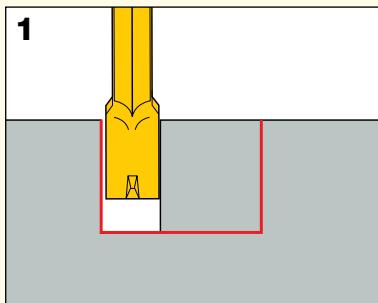

Machining Tips

Correct Grooving Sequence

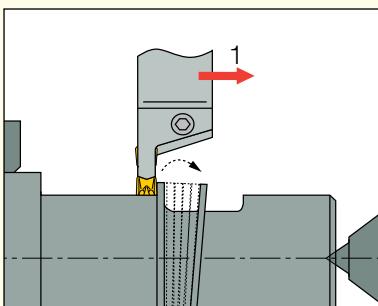

When making a groove where the insert's width is not identical to the groove's, it is recommended to select an insert that will enable to groove symmetrically in such

a way that the material is always in the center of the insert. This practice will ensure better chipbreaking and symmetrical cutting forces.

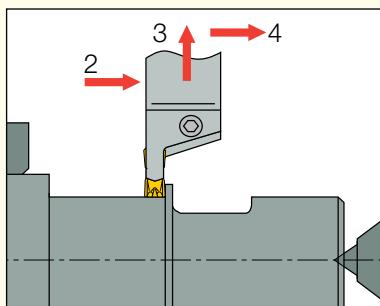

Eliminating a “Hanging Ring”

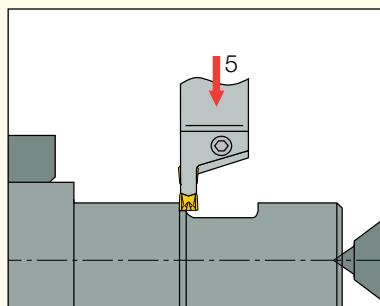

When turning at the end of a bar or toward a recess between two walls, a “hanging ring” may be formed. To eliminate the unwanted “hanging ring”:

1. Turn toward the recess. Stop a short distance before reaching the recess.

2. Pull back the groove-turn tool and re-position it.

3. Machine as shown. This final operation achieves the size and flatness of the side wall.

Internal Machining

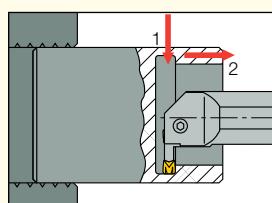

Improving Internal Turning in a Blind Hole

Internal turning in a blind hole brings about the problem of chip exit. When the tool reaches the rear side wall, chips may be caught between the wall and the insert, possibly causing insert breakage.

Two solutions that can eliminate this problem:

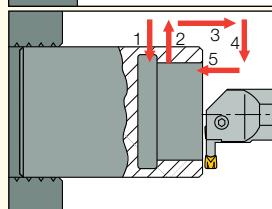

First Solution

1. Start by grooving at the rear wall.
2. Continue by turning from the inside toward the outside.

Second Solution

Start by grooving at the rear wall. Pull the tool back to the outside. Turn the final diameter from outside, toward the groove.

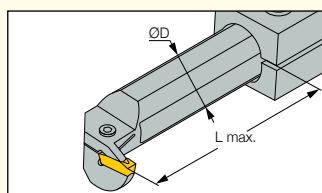

Optimizing Internal Machining Toolholder Overhang

It is always recommended to use the minimum possible overhang in order to maintain maximum toolholder rigidity.

As a general rule, maximum overhang should not exceed three times the holder-bar diameter.

Lmax.≤3D

GROOVETURN USER GUIDE

Finishing Operation: Diameter Compensation

A compensation factor for the final diameter must be used in the final machining operation.

After the initial grooving to the required final diameter, the machining direction is normally changed for longitudinal turning.

At this point the deflection occurs.

If machining continues without correction, corner **A** will penetrate the material.

This will result in two different diameters:

ϕD_1 from the grooving and ϕD_2 from the turning.

The difference between ϕD_1 and ϕD_2 is a value we define as Δ .

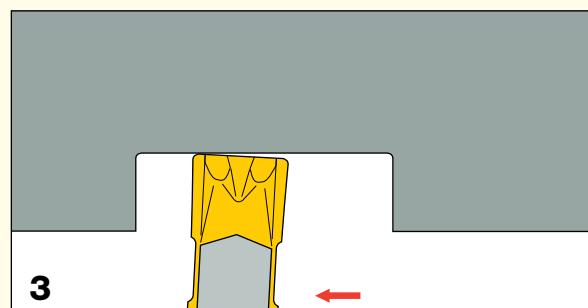

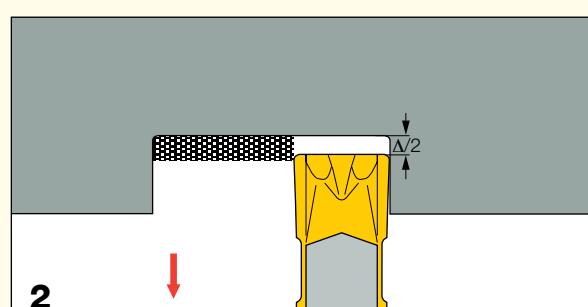

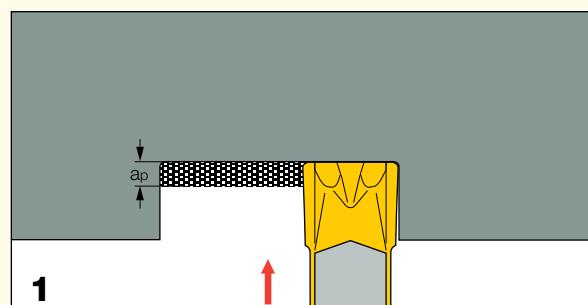

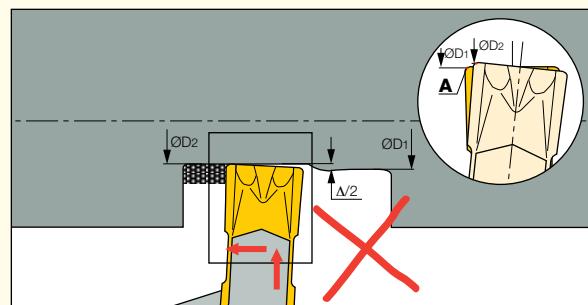

The compensation factor is $\Delta/2$, as shown below.

$$\frac{\Delta}{2} = \frac{\phi D_1 - \phi D_2}{2}$$

Using the compensation factor will eliminate the small surface step. Follow this simple procedure during machining:

1. Groove to the final diameter.
2. Pull the tool back, a distance equal to the value of $\Delta/2$.
3. Continue the finish turning operation.

Characteristic values of Δ are shown in the diagrams on the next page.

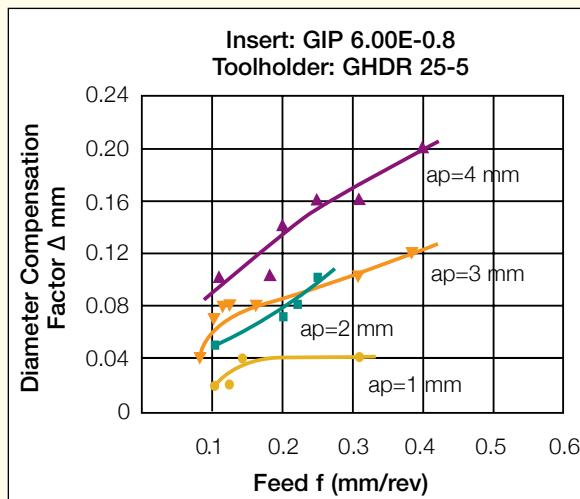

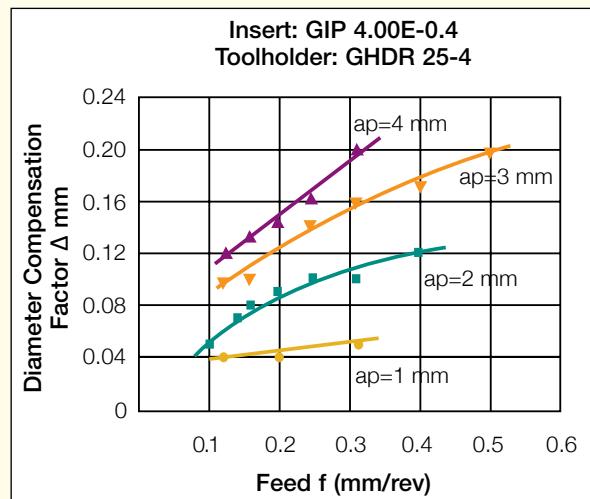

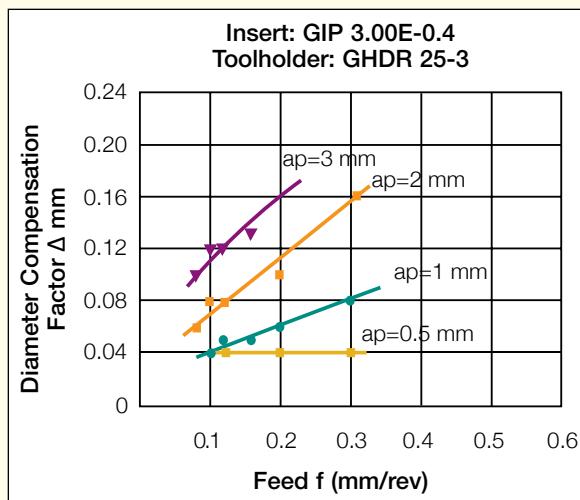

GROOVETURN USER GUIDE

Characteristic Values of Δ

The diagrams show experimental results for specific machining conditions. These are sample values that will vary with different workpiece materials and different holder types.

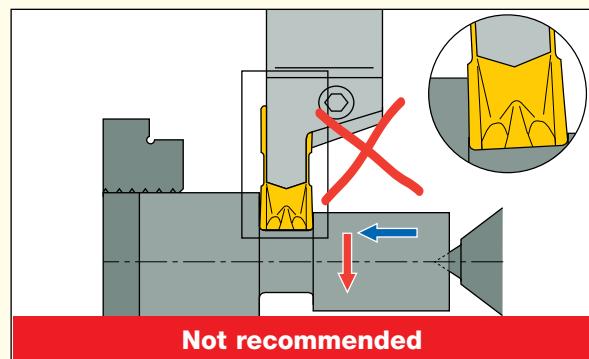

Measure the Δ value for your finishing operation in a short test using your selected finishing conditions. Do not run your test using the final diameter.

Multifunction Operations

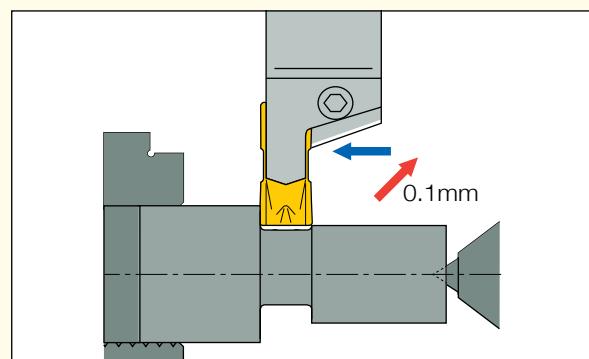

The groove-turn are multifunction tools, able to operate in a sequence of grooving and turning modes. Moving from turning to grooving requires consideration of the basic GRIP principle, thereby eliminating the possibility of insert breakage.

In this situation one must release the side deflection which is necessary in turning, but not recommended in grooving.

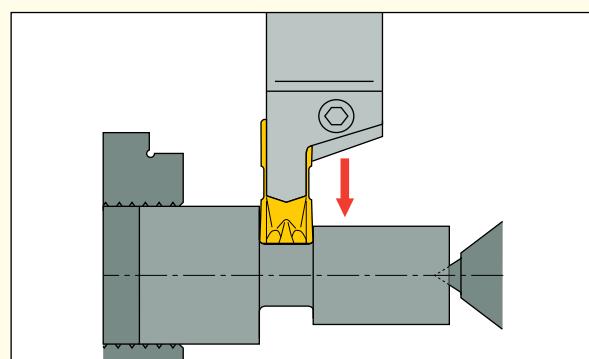

The following machining sequence is suggested:
After completing the longitudinal turning, but before starting the grooving, the side deflection must be released.

Move the tool in the direction opposite that of feed, approximately 0.1 mm, and return to the original position without side load.

Then, after the deflection has been released and the holder is perpendicular to the workpiece, the grooving operation may start.

Machining Between Walls

One of the most important advantages of the GROOVE TURN systems is the ability to machine between walls. To achieve the best results, the following sequence is recommended:

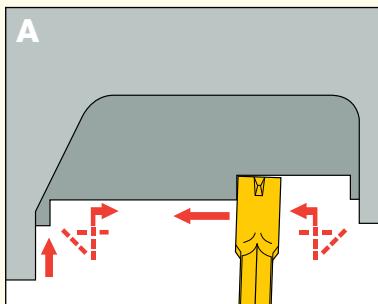

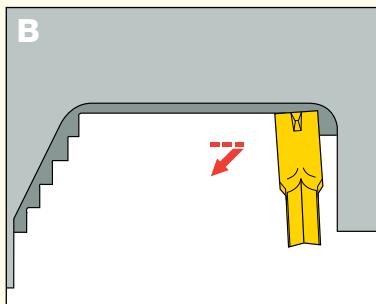

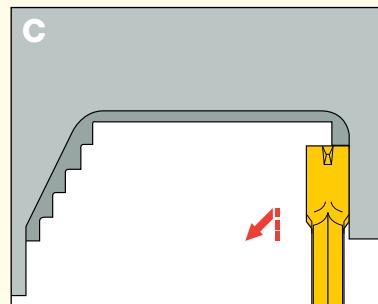

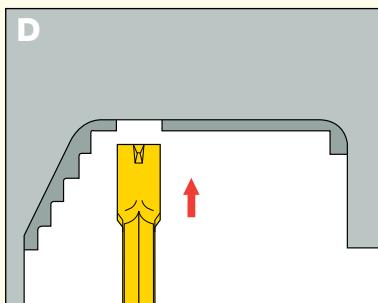

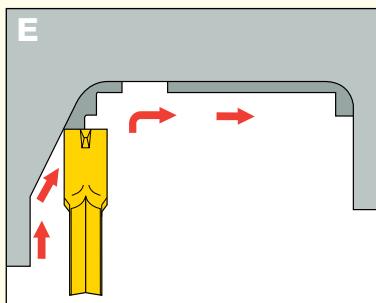

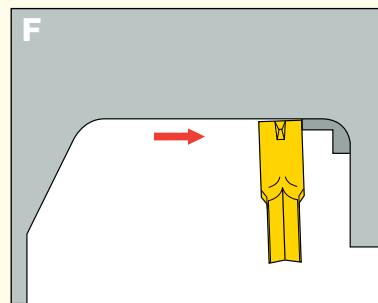

Roughing

Plunge to depth of cut. Pull back 0.2 mm radially. Turn longitudinally, retract at the end of the cut by 0.2 mm, simultaneously in radial and axial directions. Plunge again and repeat same cycle leaving steps

of 0.2 mm at the shoulders for the finishing cut. Minimum D.O.C. has to be $ap \geq Rx1.2$ (corner radius).

Finishing

Plunge on the right side, reaching the tangent of the bottom radius. Retract and relieve the tangent point of the radius on the other side. Retract and machine all of the contour, pulling back by compensation value along the bottom (see page B140).

GROOVETURN USER GUIDE

Recommended Criteria for Replacement of the Cutting Edge

The cutting edge should be replaced in time to save costly downtime. The recommended value of wear at replacement is defined as the wear land size. The insert should be replaced when the wear land size is such that the increase in side forces is still small - not causing the insert to break and still maintaining the required workpiece tolerances. Wear is a function of machining time. The cutting edge should normally be replaced after 15 minutes of machining time.

Insert Wear - Tool Life

Wear on the Clearance Face

Wear land on groove turn inserts generally occurs at the corner of the clearance face **VBN**, on the side near the corner **VB**, on the frontal cutting edge **VBF** and at the end of the cutting side **VG**. The effective life of the cutting edge ends when any of the wear land values - **VB**, **VBN**, **VBF** or **VG** - exceed the recommended maximum values shown.

The largest wear land is normally measured at the corner of the clearance face **VBN**. It has the most influence on the dimensions and tolerances of the final workpiece.

The wear land shape on GRIP inserts differs slightly from that of ISO inserts. Although the frontal cutting surface of GRIP inserts absorbs more heat and wear, the wear land **VBF** is generally negligible in turning operations when compared to **VB** and **VBN**. Wear land may be found only occasionally at the end of the cutting side **VG**.

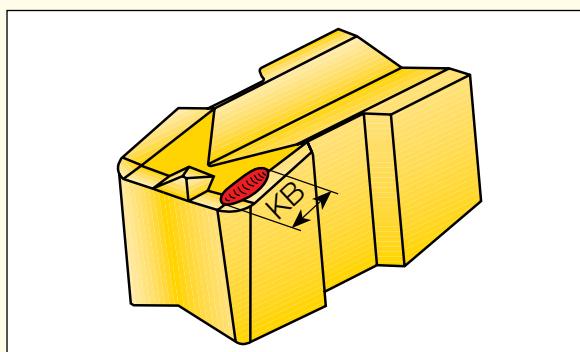

Maximum Recommended Wear Land Values Relative to Insert Widths

| W Insert Width (mm) | Maximum Wear Land (mm) |
|------------------------|---------------------------|
| ≤3 | 0.20 |
| 4 | 0.22 |
| 5 | 0.25 |
| 6 | 0.27 |
| 8 | 0.27 |
| ≥10 | 0.30 |

Crater Wear and Tool Life

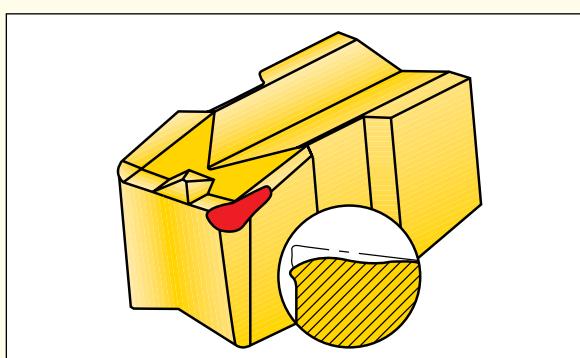

Crater wear **KB** occurs on the rake face and is mainly affected by feed and cutting speed. Crater wear develops over time toward the frontal cutting edge.

If penetration of the frontal cutting edge occurs, it will immediately affect the quality of the machined surface.

Plastic Deformation

Plastic deformation occurs when the hardness of a cutting edge is decreased due to heat and pressure. The so-called "hot hardness" of the cutting tool material limits the feed and the cutting speed. Plastic deformation will affect the dimensions and tolerances of the finished product. It generally occurs when a small corner radius is used with high cutting speeds and high feeds. Using the proper insert geometry and the correct speed and feed ranges should eliminate the problem.

For material groups, see page B134.

M-type Tools

- The M-type tools do not have a support under the insert's cutting edge.
- For an insert with a smaller width than 2.2 mm there are no standard catalog tools available. There are 2 options how to use these narrow inserts:
 1. Modify an existing tool and adjust the support under the insert to the required width.
 2. Use a standard M-type tool without support.
- In wider widths there are also cases where the support under the insert will disturb the machining. (threading inserts, pulley-V inserts and various specially tailored inserts). Also in these cases the above explanation should be considered.
- These tools also provide the option for the customer to use a very wide range of insert widths on the same tool. (Up to 6.4 mm)
- **Machining conditions need to be light due to small support and limited gripping forces.**

Tools for Machining with High Pressure (up to 340 bar)

The high pressure coolant feature has been in existence for a long time in the metal removal world, taking a bigger role in today's machining.

ISCAR was one of the first cutting tools companies to respond to market needs by designing and producing tools for ultra high and high pressure coolant flow.

High pressure coolant was initially implemented mainly for difficult-to-machine materials such as titanium, inconel and other heat resistant alloys.

Later it was found that tool-life, productivity and chip control can be improved when machining stainless and alloyed steel.

The new JHP tools are essential and important in the aviation, aerospace and medical industries.

How does it work?

The stream velocity of the coolant emitted from the pump increases as the coolant holes become smaller. When it emerges out of the tool through the nozzle, the velocity is very high, exerting considerable force on the chips, lowering their temperature and protecting the cutting edge from thermal shock.

High temperature alloys produce a very high temperature as they are being cut. By effectively removing the heat, the chips become less ductile and thus easier to break.

Shorter chips are easily managed - they do not tangle around the workpiece or machine parts, so there is no need to stop the process frequently.

Usually in conventional cooling the chip prevents the coolant from reaching the insert rake face in the cutting zone. The coolant stream of the JHP tools is directed precisely between the insert rake face and the flowing chip. This results in longer tool life and a much more reliable process.

The coolant channels of the JHP tools feature outlets very close to the cutting edges, thus gaining the following advantages:

- Shorter machining time – The cutting speed may be increased by up to 200% when machining titanium & heat resistant alloys.
- Longer tool life – tool life increases by up to 100% not only on titanium and heat resistant alloys, but also on stainless and alloy steels.
- Improved chip control – even on the most ductile and problematic materials, small chips can be obtained.
- Very effective cooling down of the cutting edge, which reduces sensitivity to heat fluctuations
- Safer and more stable process

 JHP tools provide advantageous performance also when conventional pressure is applied.

General Information**Pressure Ranges**

Up to 30 bar – Low pressure (LP) may provide some improvement in tool life. Usually will not have an effect on chip control.

30 – 120 bar – High pressure (HP) the most commonly used pressure range used with JHP tools.

Increase in tool life, increase in cutting speeds, improved chip control.

120 – 400 bar – Ultra high pressure (UHP) requires special tool design in order to take advantage of the extra pressure. Minor increase in tool life compared to HP range.

Ultra high pressure coolant is usually implemented for machining titanium and heat resistant alloys when there is a need for very small chips and higher machining rates.

Since 2000, ISCAR has provided hundreds of special tools featuring ultra high pressure coolant capability, for various customers and applications.

Pressure vs. Flow

Each JHP tool is designed to work at a certain flow rate, depending on the pressure. The flow rates are listed in the catalog pages for each tool. The user should verify that his pump can supply the required flow in order to achieve the optimal results. The pump data sheet will usually list the maximum flow rate for each pressure range.

Chips & Pressure

The coolant flow will start to break the chips at a certain pressure, depending on the specific tool and the workpiece material. If the chips are not breaking, the pressure should be increased until chip control is achieved. Above this pressure, as it is increased the chips become smaller and smaller. It is possible to control the size of the chips by modifying the pressure in order to achieve the desired chip size.

Tools for Machining with High Pressure (up to 340 bar)**High Pressure Coolant with Groove-Turn and Parting Tools**

In grooving and parting operations, applying high pressure coolant provides excellent chip breaking results on all materials.

On exotic alloys such as inconel and titanium, it is usually impossible to break the chips with standard external coolant pressure.

Applying high coolant pressure provides excellent chip breaking results.

On some alloyed and stainless steel, especially when low feeds are applied, high pressure coolant may solve chip breaking problems.

High pressure coolant reduces or even eliminates built-up edge phenomenon, especially when machining stainless steel and high temperature alloys.

In turning operations, applying high pressure coolant is less effective because the jet is directed to the frontal edge.

Grooving Test

Material: Titanium (Ti6Al4v)

Operation: Grooving

Tool: GHDL 25-6-JHP

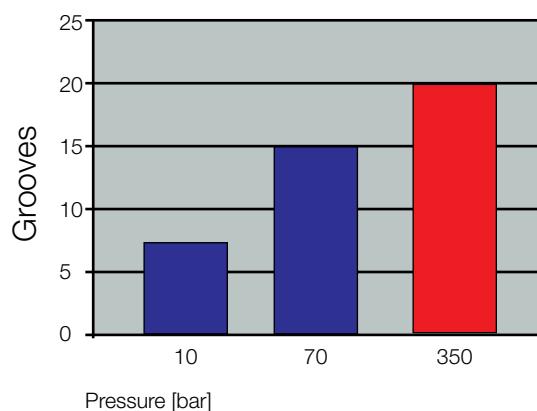

Insert: GIMF 608 IC07

Vc: 50 mm/min

f: 0.15 mm/rev

| Pressure [bar] | | |
|----------------|----|-----|
| 10 (External) | 70 | 350 |
| | | |

Tool Life

Grooving Test

Material: Stainless Steel AISI 316L

Operation: Grooving

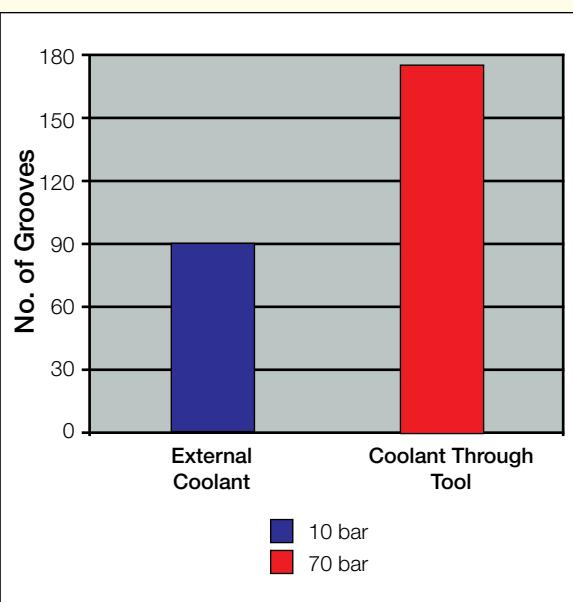

Tool: TGTR 25-3JHP

Insert: TAG N3J IC808

Groove depth: 25 mm

Vc: 150 m/min

f: 0.15 mm/rev

Assembly and Safety Guidelines

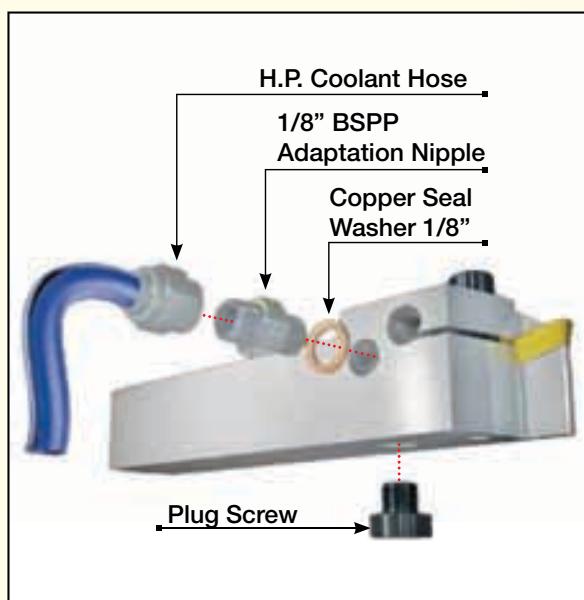

When Using the JET HP ISO Turning and Grooving Tools

Before use, please ensure that:

- The machine door is in a fully closed position.
- The coolant hose is in the correct location and fully tightened with all seals in position.
- A blank plug is inserted into the unused coolant hole.
- All O-rings and washers are in place.
- The coolant hose is tightened securely to the toolholder and tool block, to prevent leakage of coolant.

Important

Always pay attention not to exceed the maximum safe working pressure for **GROOVE-TURN tools 340 bar** and **PARTING OFF tools 300 bar**.

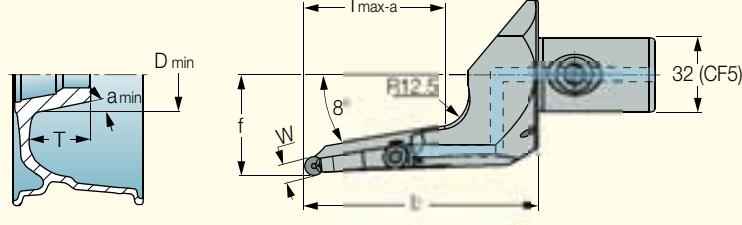

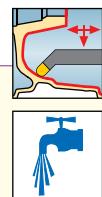

Tools for Machining Aluminum Wheels

CF5 FGHIFR-8A

Internal Machining Heads with CLICKFIT Adaptation for Facing and Internal Machining of Aluminum Wheels

| Designation | D min | W | l ₂ | T _{max-a} | f |

45° Undercutting Bars for Internal Turning of Aluminum Wheels

| Designation | W | d | D min | T _{max-r} | l ₁ | l ₂ | f | F ₁ | h ₁ |
|-----------------------|------|-------|-------|---------------------|----------------|----------------|------|----------------|----------------|
| GHIUR/L 40UC-6 | 6.00 | 40.00 | 70.00 | 0.00 ⁽¹⁾ | 350.00 | 75.0 | 23.8 | 24.7 | 18.0 |
| GHIUR/L 50UC-6 | 6.00 | 50.00 | 78.00 | 0.00 ⁽²⁾ | 350.00 | 75.0 | 28.8 | 29.7 | 23.0 |
| GHIUR/L 40UC-8 | 8.00 | 40.00 | 68.00 | 0.00 ⁽³⁾ | 350.00 | 79.0 | 28.8 | 26.0 | 18.0 |
| GHIUR 50UC-8 | 8.00 | 50.00 | 58.00 | 0.00 ⁽⁴⁾ | 350.00 | 80.0 | 30.2 | 31.4 | 23.0 |

(1) For bore diameter D>200, T_{max} is 1.3 mm (2) For bore diameter D>200, T_{max} is 2.0 mm (3) For bore diameter D>200, T_{max} is 2.8 mm (4) For bore diameter D>200, T_{max} is 6.0 mm

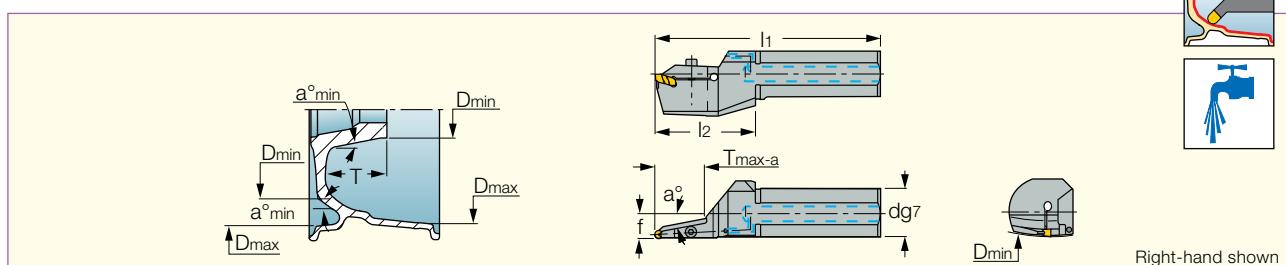

For inserts, see pages: GDMA (B47) • GIPA (W=3-6) (B46) • GIPA 8-35V (V Shape) (C12) • GIPA/GIDA 8 (Full Radius) (B48).

Spare Parts

| Designation | Screw | Key | Seal |
|-------------------|----------------|--------|-------|
| GHIUR/L-UC | SR M6X20DIN912 | HW 5.0 | PL 40 |

GHIFR/L-A

8° / 10° Approach Angle Bars, for Facing and Internal Machining

| Designation | W | D _{min} | D _{max} | l ₁ | l ₂ | T _{max-a} | f | a° | d |
|--------------------------|------|------------------|------------------|----------------|----------------|--------------------|------|----|-------|
| GHIFR/L 40C-10A-6 | 6.00 | 300.00 | 360.0 | 300.00 | 80.0 | 40.00 | 19.3 | 10 | 40.00 |
| GHIFR/L 40C-8A-8 | 8.00 | 300.00 | 360.0 | 320.00 | 100.0 | 70.00 | 19.5 | 8 | 40.00 |

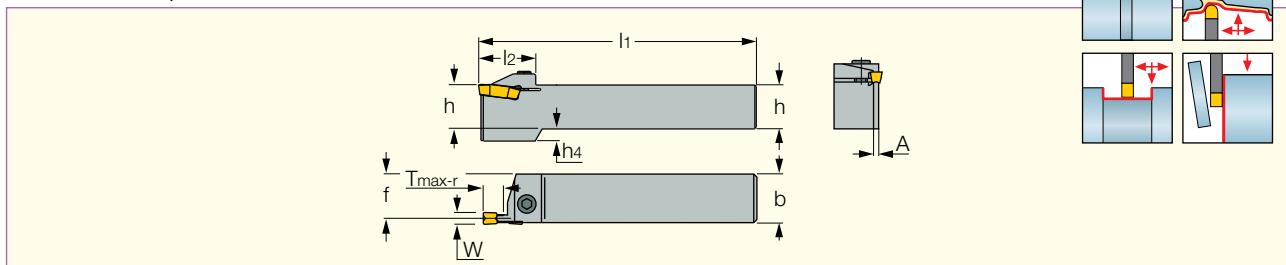

For inserts, see pages: GDMA (B47) • GIPA (Full Radius W=3-6) (B47) • GIPA/GIDA 8 (Full Radius) (B48).

Spare Parts

| Designation | Screw | Key | Seal |
|--------------------------|----------------|--------|-------|
| GHIFR/L 40C-10A-6 | SR M5X25DIN912 | HW 4.0 | PL 40 |
| GHIFR/L 40C-8A-8 | SR M6X20DIN912 | HW 5.0 | PL 40 |

GHDR/L-8A

External Toolholders for Turning, Grooving and Parting. Upper Jaw with Hard Coating to Sustain Chip Deflection

| Designation | h | W_{min} | W_{max} | T_{max-r} | b | l_1 | f | A | l_2 | h_4 |
|---------------------|------|-----------|-----------|-------------|------|--------|------|------|-------|-------|

| GIPA 8YZ-35V-1.20-D (1) | 8.00 | 1.20 | 0.050 | 6.0 | | ● | 1.45-4.80 | 0.35-0.88 |
| GIPA 8-35V-1.20 | 8.00 | 1.20 | 0.050 | 6.0 | ● | | 1.45-4.80 | 0.24-0.62 |
| GIPA 8-35V-1.20-D (1) | 8.00 | 1.20 | 0.050 | 6.0 | | ● | 1.45-4.80 | 0.35-0.88 |
| GIPA 8-35V-3.0 | 8.00 | 3.00 | 0.050 | 6.0 | ● | | 3.60-4.80 | 0.24-0.67 |

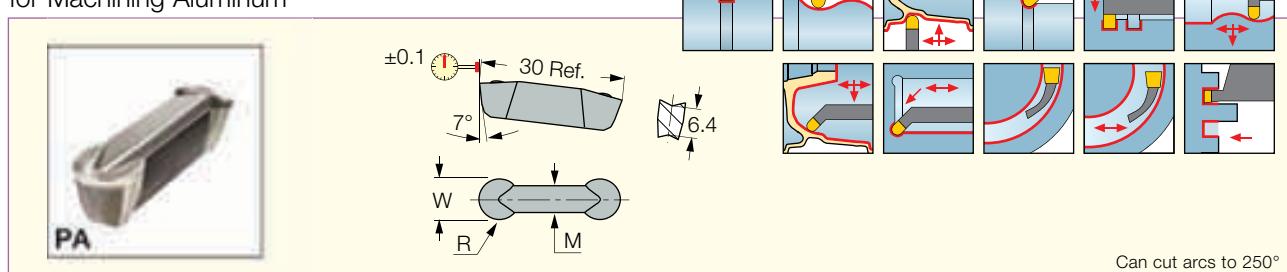

- Precision ground and polished rake to avoid built-up edge
- Toolholder seat needs to be modified according to insert profile to ensure clearance

(1) Single-ended PCD tipped insert

For tools, see pages: CGHN-8-10D (B28) • GADR/L-8 (B28) • GHIUR/L-C-22.5A-8V (C8) • GHIUR/L-C-A(15° & 27.5°)Bars (C8) • GHIUR/L-UC (C9) • GHVR/L (C10).

GDMA

Utility Double-Ended Insert with a Polished Top Rake, for Machining Aluminum

| Designation | Dimensions | | | Tough | Hard | Recommended Machining Data | | |
|-----------------|--------------|--------------|-----|-------|-------|----------------------------|-----------------|-------------------|
| | $W \pm 0.05$ | $R \pm 0.05$ | M | IC07 | IC507 | a_p (mm) | f turn (mm/rev) | f groove (mm/rev) |
| GDMA 840 | 8.00 | 4.00 | 5.6 | ● | ● | 0.00-4.00 | 0.24-0.67 | 0.14-0.38 |

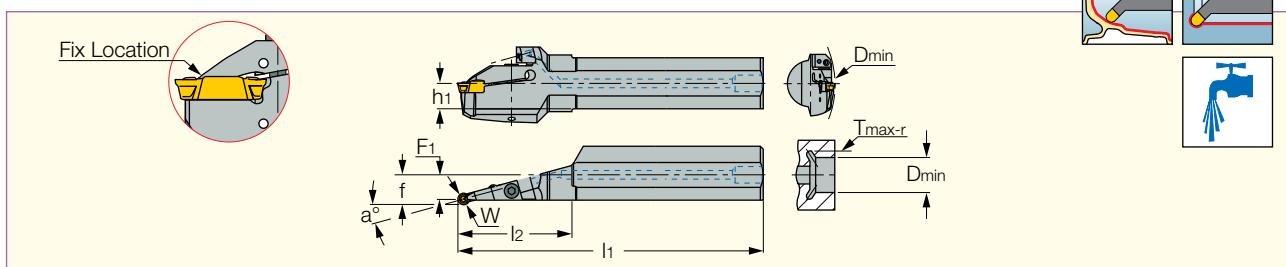

- For heavy-duty machining
- Dmin for internal machining = 65 mm (2.26")
- For cutting speed recommendations and user guide, see pages B132-145.

For tools, see pages: CF5 GHIFR-8A (C2) • CF5 GHIUR-15A (C3) • GADR/L-8 (B28) • GHDKR/L (C10) • GHIFR/L-A (C9) • GHIFR/L (W=7.0-8.3) (B93) • GHIUR/L-C-A(15° & 27.5°)Bars (C8) • GHIUR/L-UC (C9).

FGHIUR-C-15A-8

15° Approach Angle Bars, for Interrupted Cuts and Back Turning on Aluminum

| Designation | W | d | D_{min} | T_{max-r} | l_1 | l_2 | f | F_1 | h_1 | a° | Coolant |
|-------------------------|------|-------|-----------|-------------|--------|-------|------|-------|-------|-----------|---------|

Clamping Systems

DO-GRIP

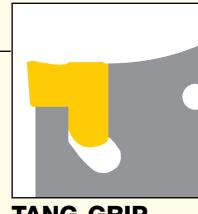

- First choice for parting
- Double-ended insert
- Self clamped for deep grooving and large diameters
- Screw clamped for small diameters
See also HELI-GRIP, page B5.

FIRST CHOICE!

TANG-GRIP

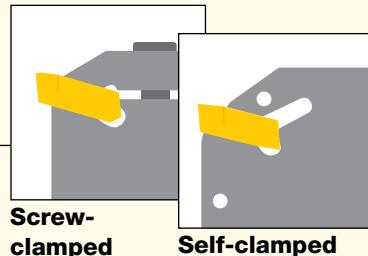

- Very rigid clamping in a tangentially oriented pocket
- Enables machining at very high feed rates and provides excellent straightness and surface finish
- Recommended for parting large diameter parts and for interrupted cuts
- Offers a free, unobstructed chip flow
- Excellent tool and pocket life

TANG-GRIP

CUT-GRIP

- Single-ended insert
- Self- and screw-clamped options

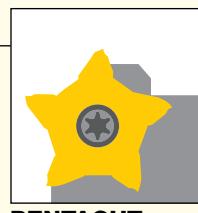

Screw-clamped

Self-clamped

PENTACUT

- 5 cutting edges
- Fast edge indexing
- For shallow grooving and up to 20 mm parting diameter

PENTACUT

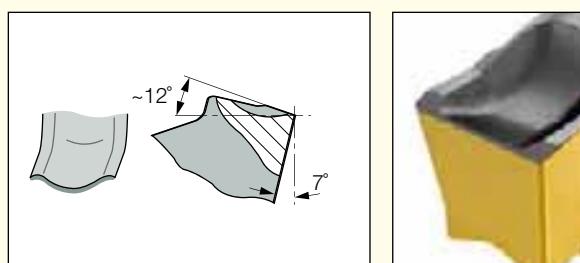

Main Chipformers

C-Type

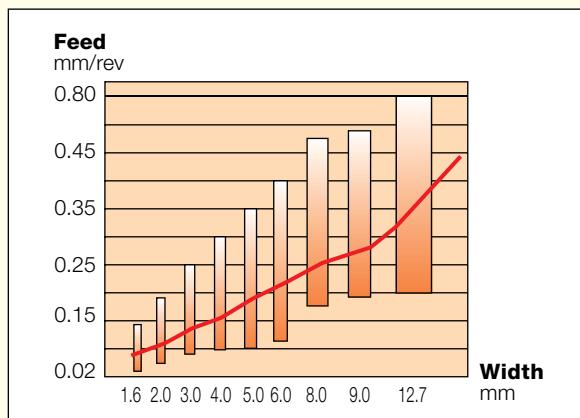

- First choice for the parting of bars, hard materials, and tough applications.
- A positive rake, single cavity with negative land and shoulders, provides extra cutting-edge strength.
- Medium-to-high feed.

$$f \approx \frac{W \text{ insert}}{22} \text{ [mm/rev]}$$

| Alloy Steel | Austenitic Stainless | High Temp. Alloys | Nonferrous Materials | Cast Iron |
|-------------|----------------------|-------------------|----------------------|-----------|
| ✓ | ✗ | ✓ (IC20 only) | ✓ (IC20 only) | ✓ |

Recommended feed range
as a function of insert width

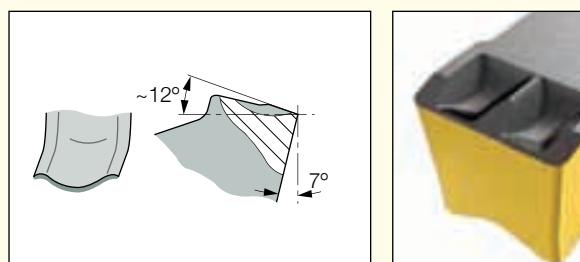

Recommendations are for neutral inserts.
For R/L inserts, reduce feed by 20-40%.

W-Type

- Similar to C-type, but with a central ridge that forms double cavities on the rake face and reinforces the frontal cutting edge.
- Used for interrupted cuts and unfavorable conditions.

$$f \approx \frac{W \text{ insert}}{22} \text{ [mm/rev]}$$

| Alloy Steel | Austenitic Stainless | High Temp. Alloys | Nonferrous Materials | Cast Iron |
|-------------|----------------------|-------------------|----------------------|-----------|
| ✓ | ✗ | ✗ | ✗ | ✓ |

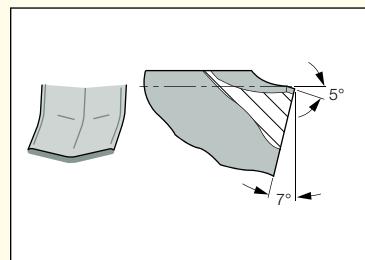

JT-Type

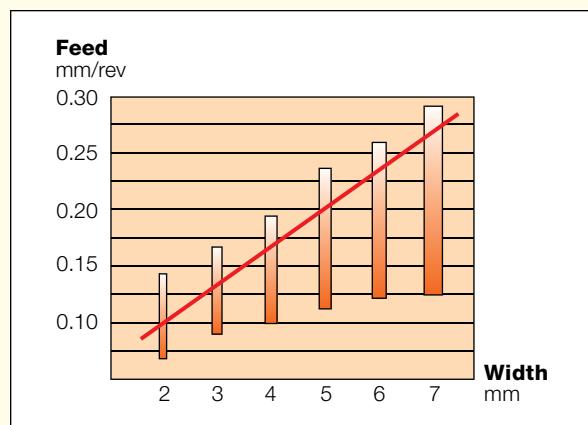

The JT chipformer design is based on the J-type chipformer, with a T-land reinforced frontal cutting edge. JT chipformer provides a solution for the intermediate range between the strong and negative C-type configuration and the positive edged J-type chipformer. The JT chipformer can be used on a wide range of materials, including soft or hard alloy and stainless steel, high temperature alloys and also cast iron. The JT chipformer deforms the chips into compact shapes, in the same manner as the J-type, but it can be used at higher feeds due to its reinforced edge.

$$f \approx \frac{W_{\text{insert}}}{25} \text{ [mm/rev]}$$

| Alloy Steel | Austenitic Stainless | High Temp. Alloys | Nonferrous Materials | Cast Iron |
|-------------|----------------------|-------------------|----------------------|-----------|
| ✓ | ✓ | ✓ | ✗ | ✓ |

Recommended feed range as a function of insert width

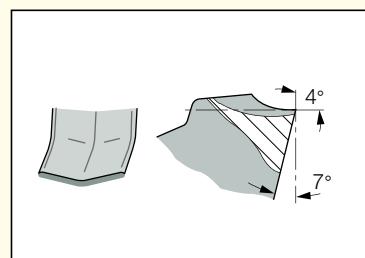

**J-Type**

- First choice for soft materials, parting of tubes, small diameters and thin-walled parts
- Cutting edge with positive rake
- General application on low carbon steel, alloy steel, austenitic stainless steel.
- Low-to-medium feed

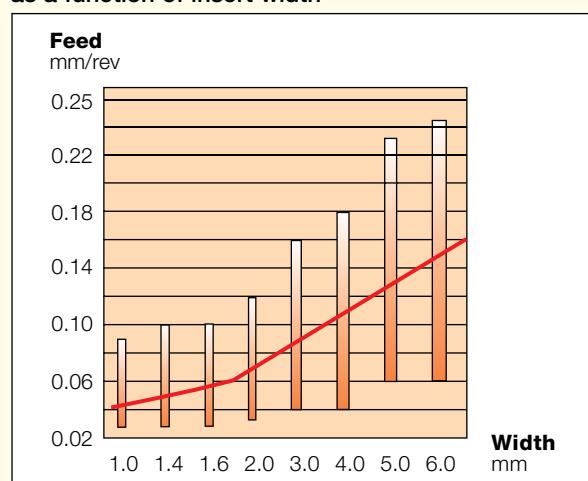

Material: Austenitic stainless steel

$$f \approx \frac{W_{\text{insert}}}{29} \text{ [mm/rev]}$$

| Alloy Steel | Austenitic Stainless | High Temp. Alloys | Nonferrous Materials | Cast Iron |
|-------------|----------------------|-------------------|----------------------|-----------|
| ✓ | ✓ | ✓ | ✓ | ✗ |

Recommended feed range as a function of insert width

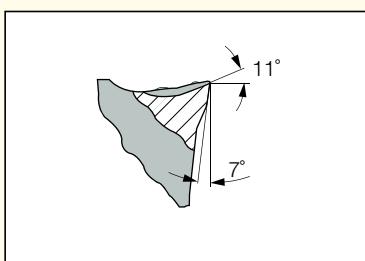

Recommendations are for neutral inserts.
For R/L inserts, reduce feed by 20-40%.

Z-Type

- Cutting edge with high positive rake, suitable for parting of tubes, thin walled arts and for small diameters
- Suitable for soft materials
- Excellent for cutting bearing steel and stainless steel
- Low-to-medium feeds

$$f \approx \frac{W_{\text{insert}}}{33} \text{ [mm/rev]}$$

| Alloy Steel | Austenitic Stainless | High Temp. Alloys | Nonferrous Materials | Cast Iron |
|-------------|----------------------|-------------------|----------------------|-----------|
| ✓ | ✓ | ✓ | ✓ | ✗ |

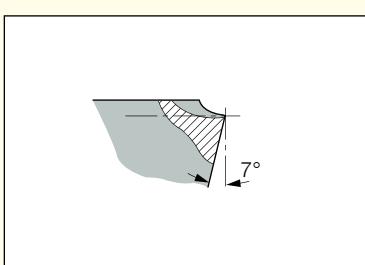

UA/UT-Type

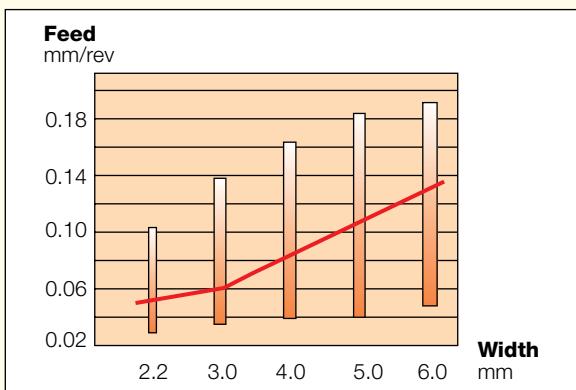

- A chipformer for use at low feeds
- Recommended for CrNi alloys and low carbon steel, especially in the bearing industry and on similar, problematic materials
- The narrow chipformer design ensures short deformed chips and provides improved performance
- UA and UT are similar chipformers. UT is slightly tighter than the UA chipformer

$$f \approx \frac{W_{\text{insert}}}{45} \text{ [mm/rev]}$$

| Alloy Steel | Austenitic Stainless | High Temp. Alloys | Nonferrous Materials | Cast Iron |
|-------------|----------------------|-------------------|----------------------|-----------|
| ✓ | ✗ | ✗ | ✗ | ✗ |

Recommended feed range
as a function of insert width

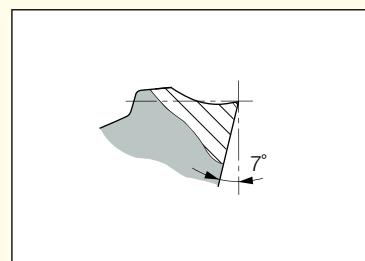

P-Type

- Very positive rake inclination and sharp cutting edge.
- For soft materials, slim parts and general parting.

$$f \approx \frac{W_{\text{insert}}}{55} \text{ [mm/rev]}$$

| Alloy Steel | Austenitic Stainless | High Temp. Alloys | Nonferrous Materials | Cast Iron |
|-------------|----------------------|-------------------|----------------------|-----------|
| ✓ | ✓ | ✗ | ✓ | ✗ |

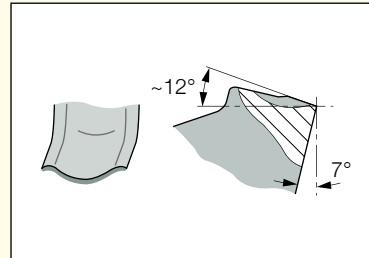

M-Type

- Similar to C-type, but with modified edge
- Improved chip control at medium feed

$$f \approx \frac{W_{\text{insert}}}{22} \text{ [mm/rev]}$$

| Alloy Steel | Austenitic Stainless | High Temp. Alloys | Nonferrous Materials | Cast Iron |
|-------------|----------------------|-------------------|----------------------|-----------|
| ✓ | ✗ | ✓ | ✗ | ✗ |

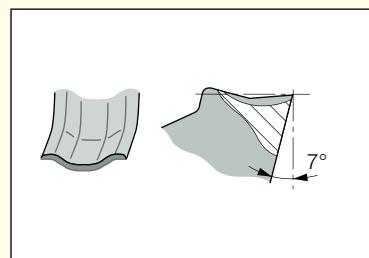

A-Type

- Positive rake, sharp edge
- For parting aluminum
- In grade IC20

$$f \approx \frac{W_{\text{insert}}}{43} \text{ [mm/rev]}$$

| Alloy Steel | Austenitic Stainless | High Temp. Alloys | Nonferrous Materials | Cast Iron |

Chipbreaking Range

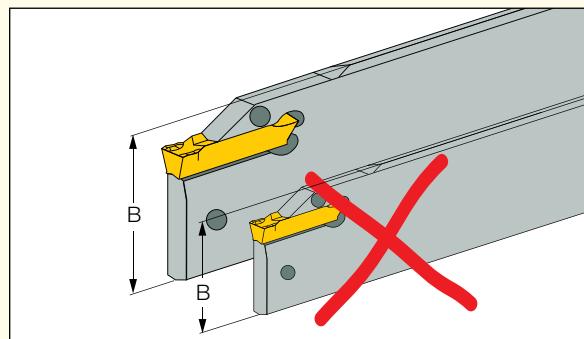

Material: 100 Cr6 Cutting Speed: 120 m/min

The blue highlighted areas represent the recommended chipformer shape for each chipbreaker.

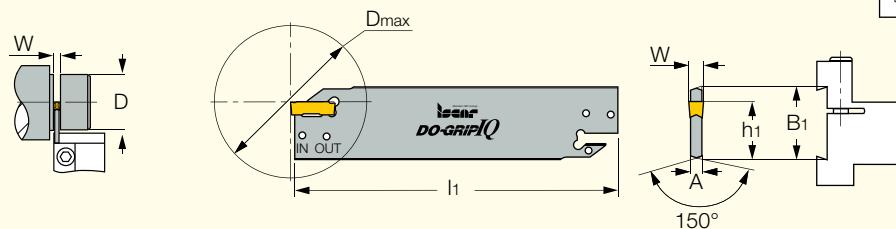

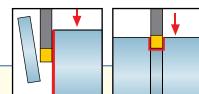

Selection Preference Priority

- Use an insert with 0° lead angle.
- Tool up with largest blade size B.
- Smallest appropriate width of cut.

• Insert limit is Tmax=18 mm. If deeper penetration is required, the insert should be modified into single-ended by the user. • DG..1.0 insert can be mounted into pocket sizes 2 and 3. In that case the pocket width has to be modified -see page D22 • For user guide, see pages D59-71.

⁽¹⁾ For Traub machines, model TNC 30, TNM 28, TNS 26/30/42/112, TNA 300, TNK 260. ⁽²⁾ For Tornos Bechler, Emco 2000/20, 2000/26 machines. ⁽³⁾ For Traub machines, model TNC 42/65, TNM 42/65, TNS 42/60/65, TNA 300/400. ⁽⁴⁾ Mounted on all ISCAR standard blocks. ⁽⁵⁾ For DG: 1.0 insert - modify holder. ⁽⁶⁾ The specified limit refers to the tool.

For inserts, see pages: DGN-P (D28) • DGN-UT/UA (D27) • DGN-WP (D29) • DGN-Z (D26) • DGN/DGNC/DGNM-C (D24) • DGN/DGNM-J/J/S/JT (D25) • DGR/L-C DGRC/LC-C (D24) • DGR/L-Z/ZS (D27).

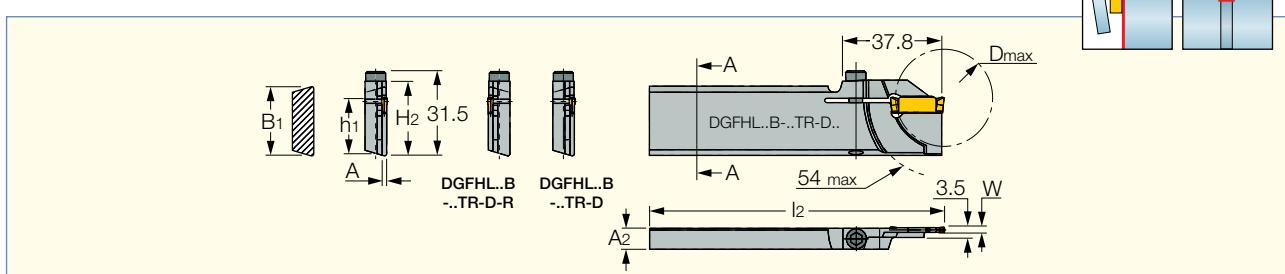

For holders, see pages: C#-TBK-R/L (G6) • HSK A63WH-TBK-R/L (G18) • IM63 XMZ TBK (G25) • SGTBF (F4) • SGTBR/L (F3) • SGTBU/SGTBN (F2) • UBHCR/L (F4).

| Up to 2.2 | 32.3 |
| 2.3 | 29.3 |
| 2.4 | 26.7 |
| 2.5 | 24.8 |
| 2.6 | 23.2 |
| 2.7 | 21.7 |
| 2.8 | 20.5 |
| 2.9 | 19.4 |
| 3.0 | 18.4 |

**Standard Holders
Modification**

To achieve no limitation on the workpiece diameter up to 3 mm depth, the steel support under the insert should be ground, as per the shown sketch.

DGAD-B-D

Screw Clamped Adapters for Parting and Grooving, for DO-GRIP Double-Ended Inserts

| Designation | W _{min} | W _{max} | A ₂ | A | l ₁ | D _{max} | h ₁ | B ₁ |
|--------------------------|------------------|------------------|----------------|------|----------------|------------------|----------------|----------------|
| DGAD 1.4B-D16 | 1.40 | 1.40 | 3.2 | 1.00 | 36.80 | 16.0 | 24.0 | 30.3 |
| DGAD 1.5B-D20 (1) | 1.00 | 1.50 | 3.2 | 1.00 | 41.00 | 20.0 | 24.0 | 30.3 |
| DGAD 2B-D20 | 1.90 | 2.50 | 3.2 | 1.60 | 41.00 | 20.0 | 24.0 | 30.3 |

- Up to 3 mm depth, without any limitation on the diameter.
- DG..1.0 insert can also be mounted into pocket sizes 2 and 3. In that case the pocket width has to be modified - see page D22
- For user guide, see pages D59-71.

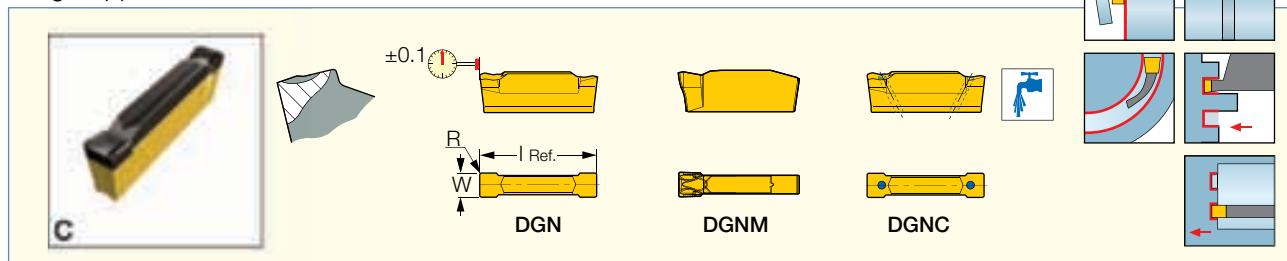

(1) Do not use DG.. 1.4 on this tool!

For inserts, see pages: DGN-P (D28) • DGN-UT/UA (D27) • DGN-WP (D29) • DGN-Z (D26) • DGN/DGNC/DGNM-C (D24) • DGN/DGNM-J/JS/JT (D25) • DGR-WP (D29) • DGR/L-C DGRC/LC-C (D24) • DGR/L-J/JS (D26) • DGR/L-P (D28) • DGR/L-Z/ZS (D27).

• JT chipformer has the basic positive configuration of the J-type and a reinforced negative frontal edge. Most suitable for soft materials at low to medium feeds. The JS-type has sharp corners. • For cutting speed recommendations and user guide, see pages D59-71.

PARTING USER GUIDE

Parting and Grooving

Selection of Inserts

For a proper match of insert and cutting material to application, the following variables must be taken into consideration:

- Width of cut (width of insert)
- Chipformer style
- Lead angle
- Corner radius
- Carbide grade

Width of Cut (W.O.C.) and Depth of Cut (D.O.C.)

In selecting W.O.C., the main factor to consider is the required D.O.C. The ratio D.O.C. \approx 8xW.O.C. is of practical use on alloy steel of average machinability. For example, applying a 3 mm W.O.C. insert TAG N3C to cut-off a 48 mm solid bar.

Additional factors which affect D.O.C. capacity, relative to the ratio, are:

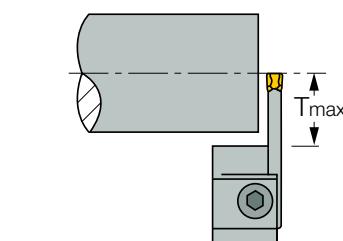

Holder or Blade Size

To minimize risk of vibration and deflection always choose:

- Blade or toolholder with smallest possible overhang.
- Toolholder with maximum shank dimension.
- Blade height (B) dimension which is larger than T_{max}.
- Blade or holder with maximum blade width (largest possible insert seat size).

Example:

- A W.O.C. 9.5 mm on blade TGFH 53K-9 (B=52.6 mm) extends the ratio of D.O.C. to W.O.C. by some 50% to 120 mm.

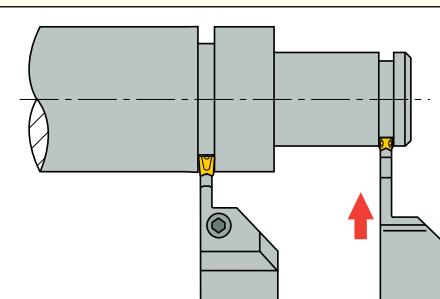

Insert Support

A self-clamped tool is recommended for deep radial machining.

A screw-clamp holder is recommended for axial and small D.O.C. machining.

90° Mounting

It is very important that the insert is mounted at 90° to the center line of the workpiece in order to obtain perpendicular surfaces and reduce the risk of vibration.

Workpiece Machinability

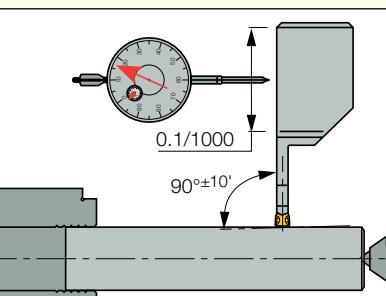

The workpiece material affects all of the above factors.

Machine Power and Setup Rigidity

Excessive W.O.C. on a light-duty machine will yield vibration and may even stop spindle rotation.

Expensive Workpiece Material

On costly metals the narrowest applicable W.O.C. should be used.

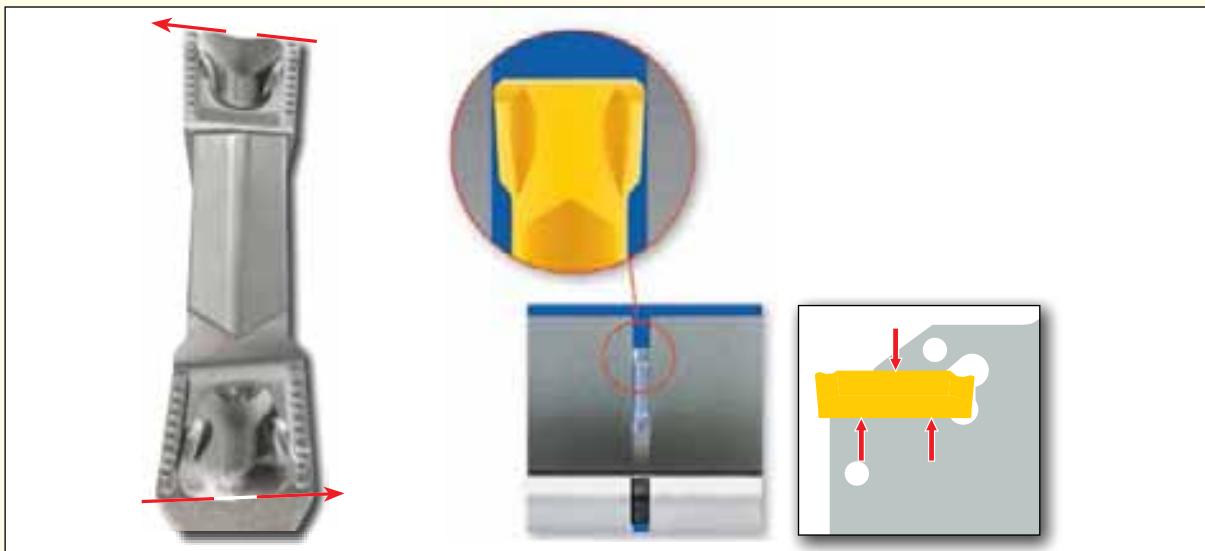

PARTING USER GUIDE

Insert Positioning

The Twisted Insert for Cut-Off and Grooving Applications

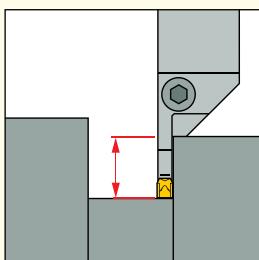

Machining depths longer than insert length is made possible with the double-ended, twisted insert body. The rear edge is slanted in relation to the frontal edge

so it does not come into contact with the machined groove surface when the tool penetrates deeply into the workpiece.

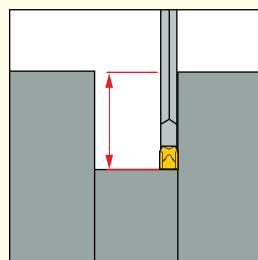

Clamping

Extended, prismatic surfaces guarantee reliable, foolproof clamping even in unstable machining conditions.

Screw-Clamping

Small diameters (D.O.C.) with screw-clamped Inserts

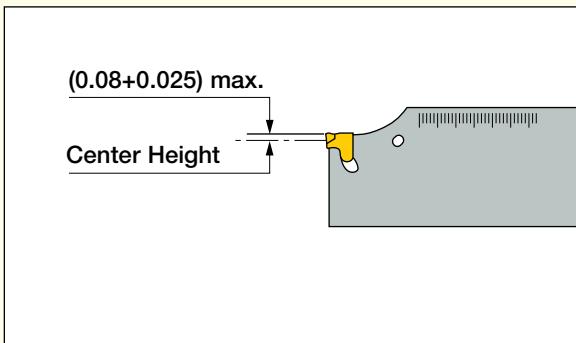

Self-Clamping

Large diameters (D.O.C.) with self-clamped Inserts

PARTING USER GUIDE

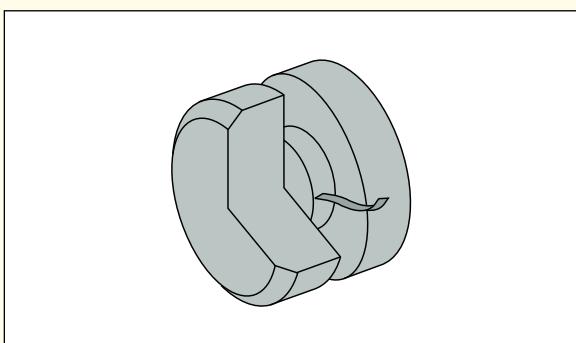

Setup

- The optimal cutting edge height above center of SELF-GRIP tools is up to 0.08 mm + 0.025 mm W.O.C., an advantage when cutting solid bar to center.
- Cut-off as close to chuck as possible.
- On new applications, machine first in the low or middle range of recommended speeds and feeds.

Machining

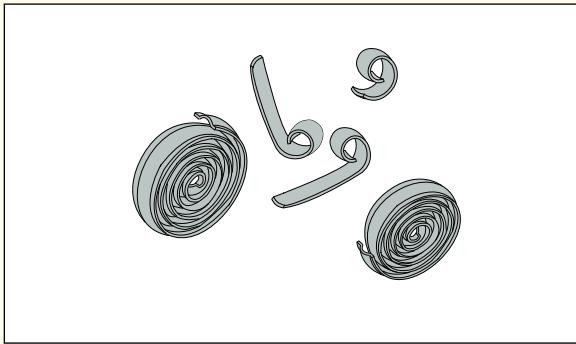

- Consistency of speed and feed improves performance.
- Apply coolant abundantly.
- Secure inserts into clean pockets.
- Cutting forces on soft workpiece materials may be insufficient to push insert well into pocket. Tap insert into place, using a plastic hammer.
- On a conventional lathe, lock the carriage to prevent axial motion during cut-off.

Usage

- Replace worn inserts promptly. The price of a new one is much less than the risk of damage from continuing with one that is worn out.
- Replace blades which have worn or damaged pockets.
- Never try to repair damaged pockets.

Chip curling is dependent upon the chipformer type and the machining conditions.

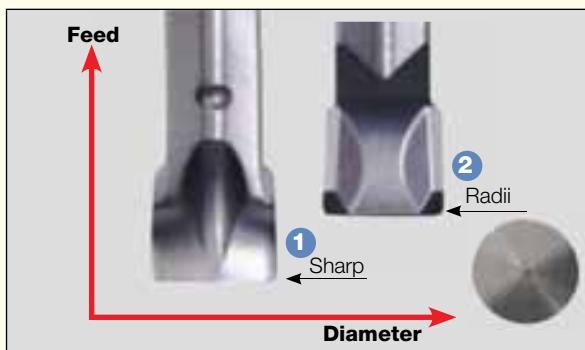

Chipformer Features

- Narrows the chip.
- Eliminates friction with groove walls, prevents chip jam overload.
- Permits higher feeds.
- Produces unscratched surfaces, eliminating additional facing.
- Curls the chips into compact spirals for easy disposal.

PARTING USER GUIDE

Selection of Corner Radius

- 1 A smaller corner radius (r) will reduce the load on the workpiece and produce a smaller size of burr.
- 2 At the same time a large corner radius allows for higher feeds and increased tool life.

"S" Sharp Corners

JS/P

- Cutting edge with positive rake and sharp corners.
- When a minimum burr (pip) size is essential.
- For small feeds.
- For small diameters or thin walls.
- For CNCs, multi-spindle and screw machines.

Standard Corner Radius

JS

- Standard medium corner size.
- For general applications and materials.

"B" Large Corner Radius

- Reinforced corners with stronger cutting edge.
- For tough applications and interrupted cuts.

PARTING USER GUIDE

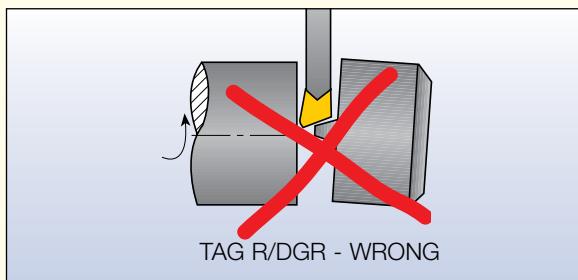

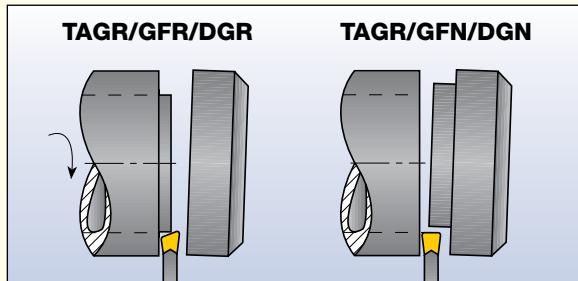

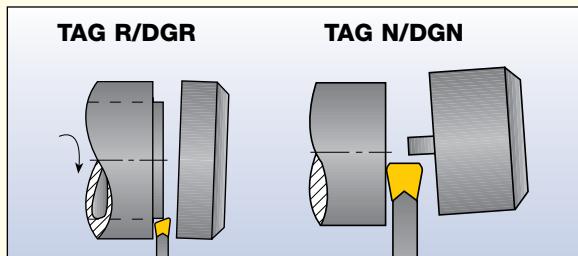

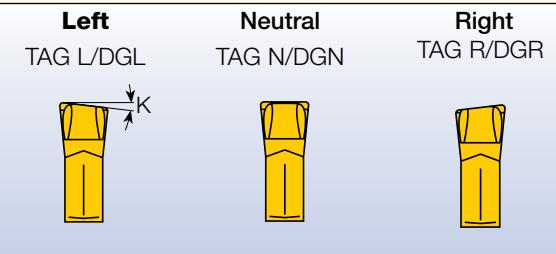

Lead Angle

Lead angle (K) on cut-off inserts reduces size of burr remaining on workpiece. Increasing the lead angle reduces the burr, but also reduces possible feed rates and tool life.

Therefore, neutral inserts are recommended for parts on which a burr is tolerated.

Insert designations such as TAG R... DGR (R.H.) and TAG L... DGL (L.H.) comply with standard terms for turning direction. When looking toward the chuck from the workpiece, R.H.=counterclockwise (C.C.) rotation of workpiece and L.H.=clockwise (C) rotation of workpiece. C.C. requires right-hand inserts; C requires left-hand inserts.

A neutral insert with 0° lead angle increases D.O.C. capacity.

PARTING USER GUIDE

Neutral Insert vs. Lead Angle Type

Neutral Insert

Lead Angle Type

Better chip control

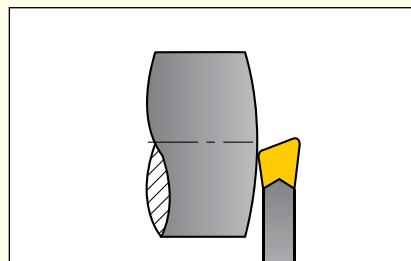

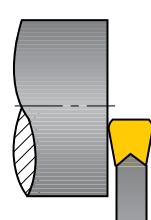

Better surface finish

Longer tool life

Better straightness

Bigger burr size

Smaller burr size

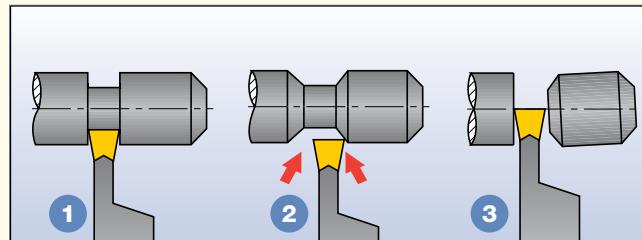

PARTING USER GUIDE

General Rules for Specific Applications

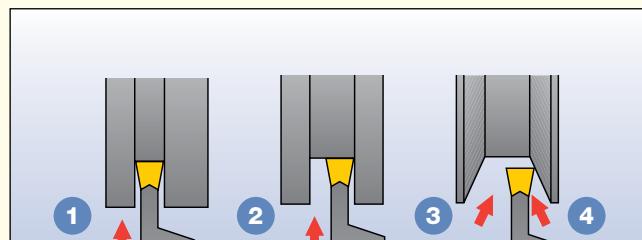

Chamfer and Cut-Off

- ① Break in and/or groove
- ② Chamfer
- ③ Cut-off

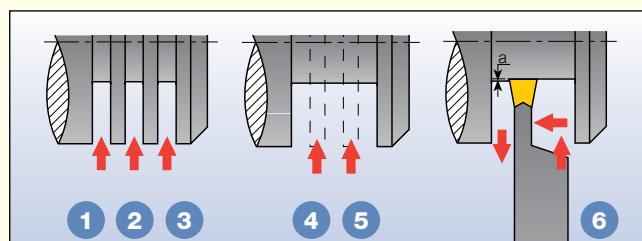

V-Belt Pulley Grooves

- ① Break in
- ② Multiple plunge to depth, at minor width of groove
- ③ ④ Bevel, plunge and turn to minor diameter

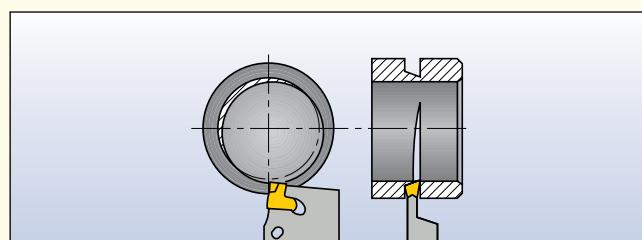

Neck Recessing

- ①-⑤ Multiple plunge grooves
- ⑥ Necking
On neck turning,
DOC (a)=up to size
of insert corner radius

Cut-Off on Eccentric Tubes

Inserts with 4° lead angle are usually recommended for tubes. However, the combination of eccentric bore and machine resiliency may increase feed-snap on breakthrough and damage the cutting edge. Changing to 6° lead angle inserts will moderate breakthrough. Alternatively, inserts with an extra negative rake-land that strengthens the cutting edge are available on request.

DO-GRIP Insert Clamping/Extracting

Extractor and Insert Replacement The Eccentric Extractor

Simple to operate; controlled rotation requires low force; guarantees limited upper jaw movement and secures maximum load on blade.

PARTING USER GUIDE

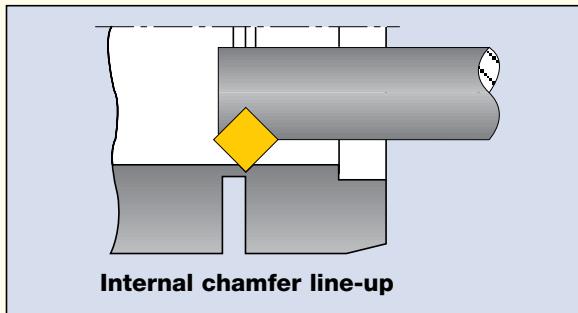

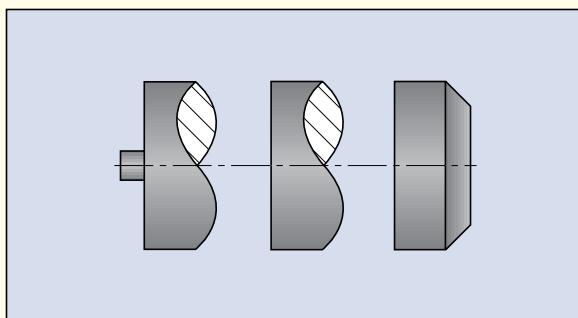

Practical Suggestions

To Reduce Burr

On CNCs, reduce feed by 75% on approaching center when stub diameters ≈ W.O.C.

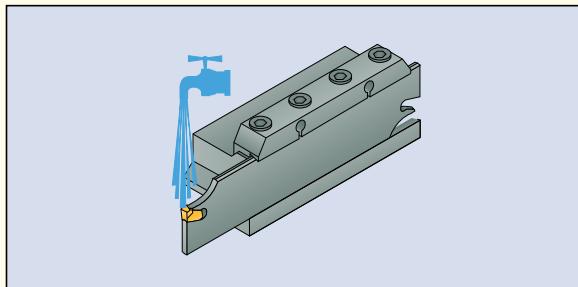

- Check center height of cutting edge.
- Use insert with lead angle.
- If 0° lead angle must be used for any reason, apply narrow W.O.C.
- Apply a supporting part-catcher (or adjust concentricity).
- On internally chamfered hollow bar, line up chamfer corner with parted workpiece surface.

Note: Conditions which yield large burrs may also cause chipping of insert corners.

To Improve Surface Finish

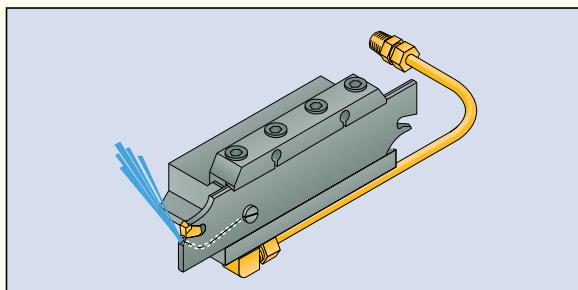

- Increase cutting speed.
- Use insert with 0° lead angle.
- Select chipformer which will provide optimum chip control.
- Use coated carbide.
- Improve coolant application.
- Eliminate chatter.

Cutting Fluid

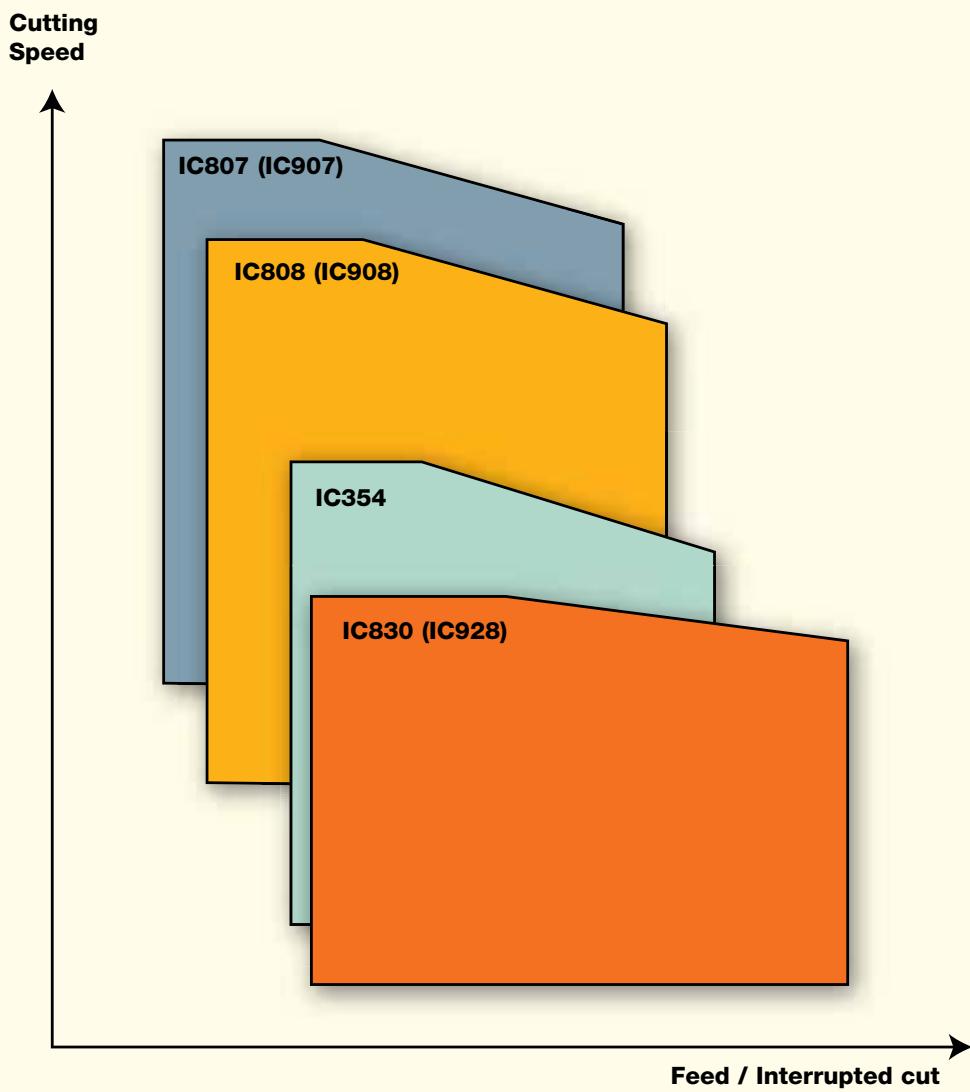

A copious supply of cutting fluid, directed exactly at the cutting edge, should be used while the insert is engaged and throughout the operation.

For tool blocks a coolant adapter can be mounted and the coolant supply connected from above or from either side. The adapter can be ordered as an optional extra and is supplied with an assembly screw.

Small Diameter Face Machining Systems**B A****Tool: HGHR/L** see page E16
Insert: GRIP... / HGPL...

W = 3 mm

Tmax = 6 mm

Min. dia. = 12 mm

Integral shank toolholder which uses double-ended 3 mm inserts. Used for face grooving and face turning of small parts, for 12 mm minimum groove diameter.

**B A****Tool: HGAER/L... (adapter)** see page E24
Tool: HFAER/L... (adapter) see page E24-25
Insert: HFPR/L...

W = 3-6 mm

Tmax = 32 mm

Min. dia. = 12 mm

Exchangeable external adapters. Used with HELIFACE and GRIP inserts, for deep face machining.

**B A****Tool: PENTA 34F** see page E51

W = 2.39-4 mm

Tmax = 5 mm

Min. dia. = 22 mm

Pentagonal insert for face grooving and recessing up to 5 mm depth of cut at a minimum 22 mm diameter.

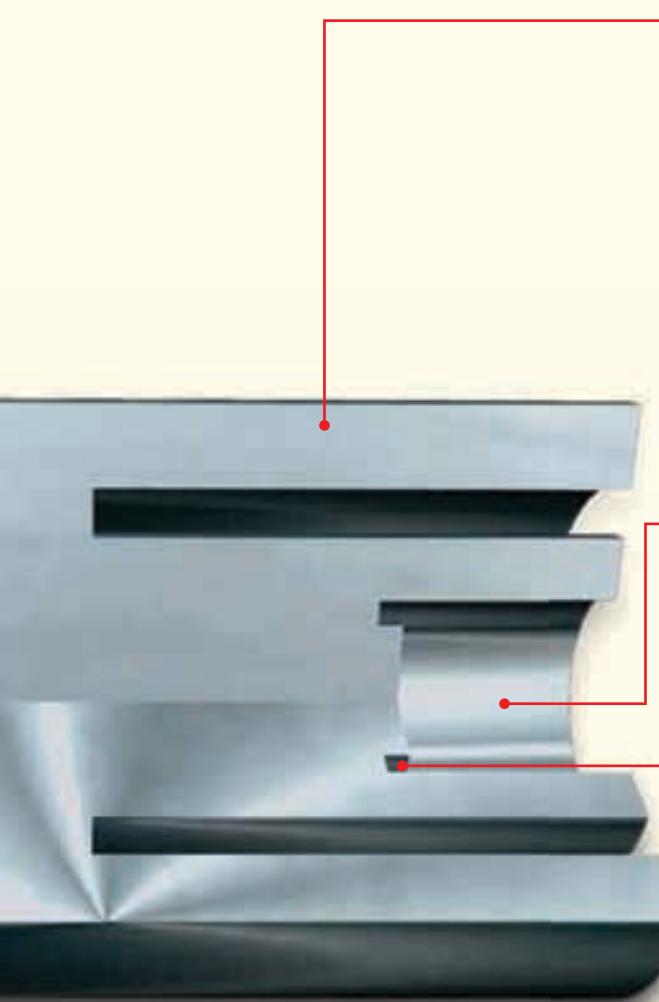

**C B****Tool: PICCO R010** see page E9-10

W = 1-3 mm

Tmax = 3.5 mm

Min. dia. = 6 mm

Small solid carbide bars, for machining shallow grooves from 6 mm minimum diameter.

**Tool: PICCO R015** see page E12**W = 2.5-3 mm****Tmax = 30 mm****Min. dia. = 15 mm**

Small solid carbide bars for machining deep face grooves of up to 30 mm and 15 mm minimum diameter.

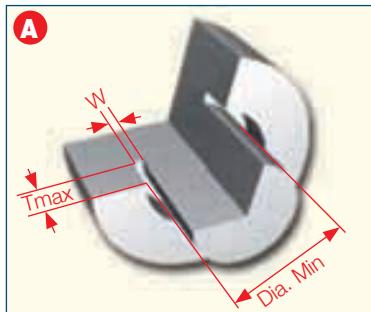

**Tool: MIFHR 9.5C-8-8** see page E15
Insert: MIFR 8-...**W = 1.5-3 mm****Tmax = 5.5 mm****Min. dia. = 8 mm**

MINCUT - A new family of internal face grooving and face turning tools for machining small diameters ranging from 8-17 mm. Strong and stable tangential pocket with internal coolant.

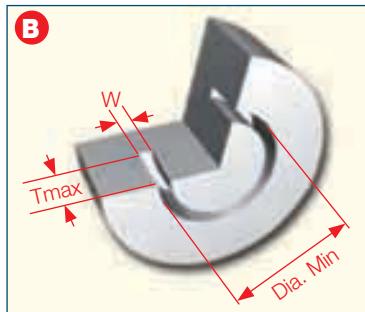

**Tool: MGCH 09C** see page E13
Insert: GFQR...**W = 1-2.5 mm****Tmax = 3 mm****Min. dia. = 12 mm**

A screw-clamped insert on an internal coolant solid carbide bar. Used for machining shallow grooves of 12 mm minimum diameter.

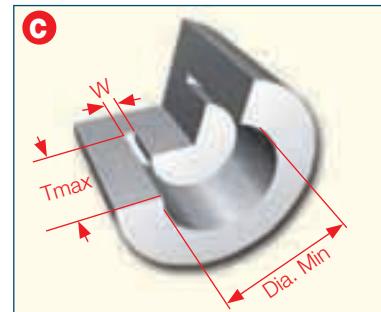

Main Applications

Grooving Next to a Shaft

External Grooving

Internal Grooving

Medium Diameter Face Machining Systems

Tool: HFHR/L... see page E17-20
Insert: HFPR/L...

W = 3-6 mm

Tmax = 32 mm

Min. Dia. = 25 mm

Integral shank toolholders which use HELIFACE and GRIP inserts. For deep face grooving and side face turning.

Tool: HFPAD... (adapter) see page E20-22
Insert: HFPR/L...

W = 3-6 mm

Tmax = 22 mm

Min. Dia. = 25 mm

Slanted, screw clamped adapter, used with HELIFACE and GRIP inserts. A part of the MODULAR-GRIP system. Very rigid, for tough face operations.

Tool: SGFFR/L see page E47
Insert: GFF...

W = 2-6 mm

Tmax = 30 mm

Min. Dia. = 25 mm

Integral toolholders which use SELF-GRIP inserts. Recommended for face grooving only. Excellent chip evacuation.

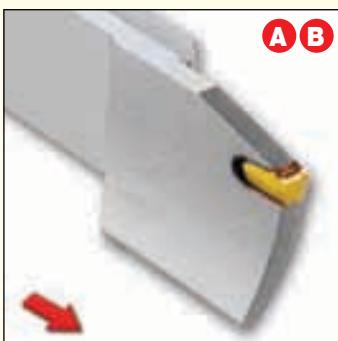

Tool: HFFR/L... see page E22
Insert: HFPR/L...

W = 4-6 mm

Tmax = 38 mm

Min. Dia. = 48 mm

Economical, double-ended blades which use HELIFACE and GRIP inserts. Recommended for deep face grooving and face turning to a maximum depth of 38 mm.

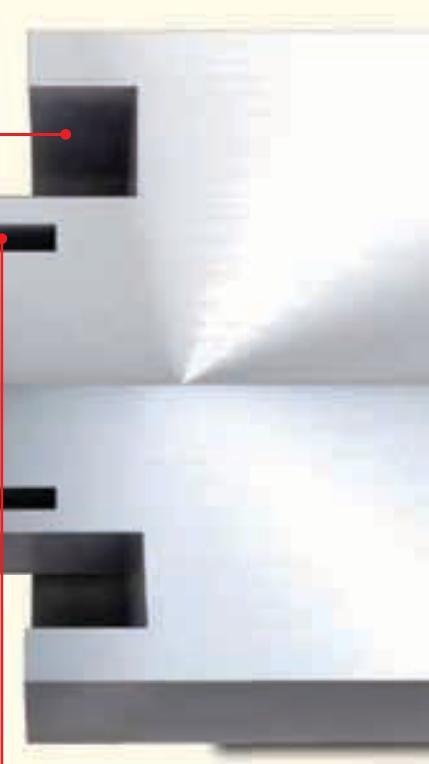

Tool: SGFFA R/L see page E48
Insert: GFF...

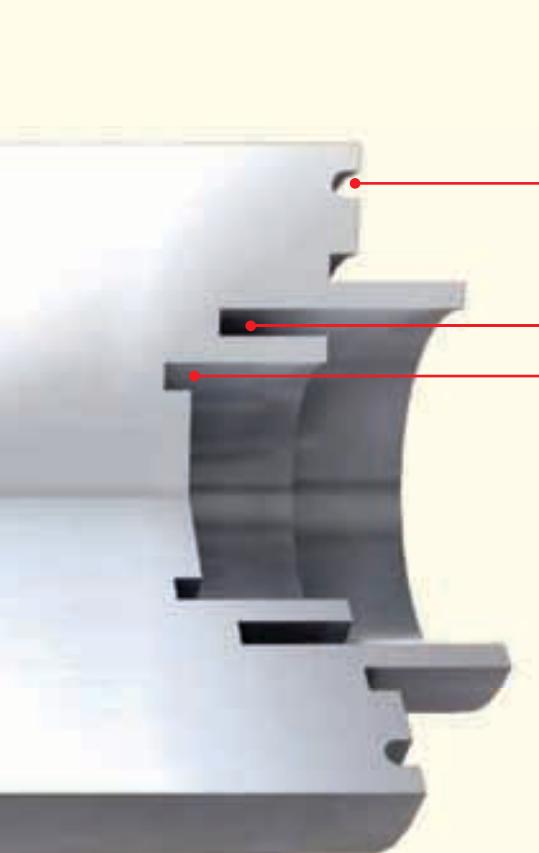

W = 2-6 mm

Tmax = 40 mm

Min. Dia. = 25 mm

Reinforced blades which use SELF-GRIP inserts. Recommended for face grooving only, can machine along shaft. Excellent chip evacuation.

Tool: HFHR/L..-M see page E26
Insert: HFPR/L...

W = 3-6 mm

Tmax = 5 mm

Min. Dia. = 20 mm

Integral toolholders, used with HELIFACE and GRIP inserts. For machining up to 5 mm depth. 3-6 mm wide inserts can be mounted in the same pocket.

Tool: HFAIR/L... & HGAIR/L (Adapter) see page E30, E32
Insert: HFPR/L...

W = 3-6 mm

Tmax = 12 mm

Min. Dia. = 32 mm

Exchangeable, internal coolant, internal adapters. Used with HELIFACE and GRIP inserts. Recommended for deep internal face machining.

Tool: HFIR/L..-MC see page E33
Insert: HFPR/L...

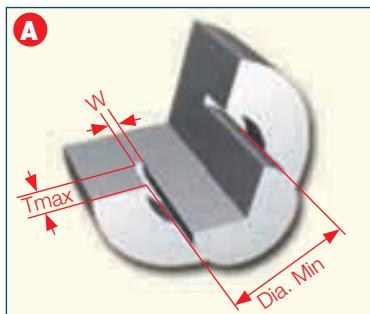

W = 3-6 mm

Tmax = 5 mm

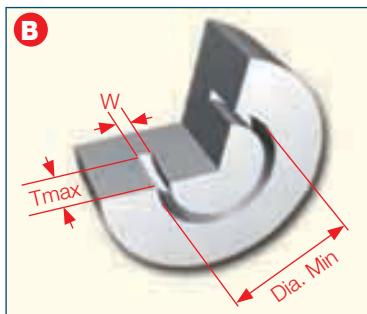

Min. Dia. = 20 mm

Boring bars for shallow face machining of up to 5 mm depth. Used with HELIFACE and GRIP inserts. Internal coolant. 3-6 mm width inserts can be mounted on the same pocket.

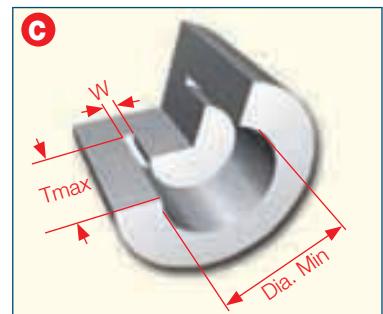

Main Applications

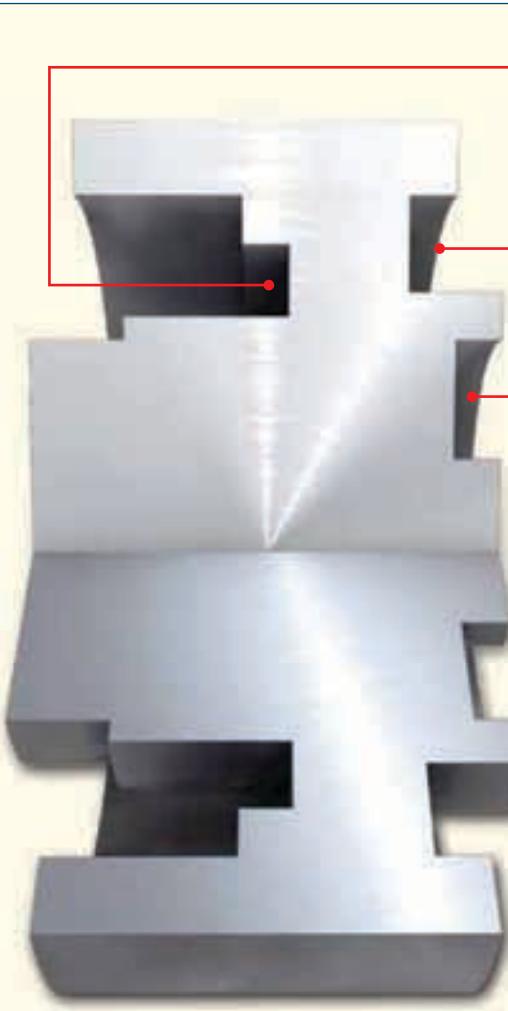

Grooving Next to a Shaft

External Grooving

Internal Grooving

Large Diameter Face Machining Systems

B A

Tool: CGFG 51..R/L-P8DG
see page E42
Insert: GIMY 8...

W = 8 mm
Tmax = 120 mm
Min. Dia. = 180 mm

Blades used with 8 mm single-ended CUT-GRIP inserts. Can machine up to 120 mm depth next to a shaft. Used for large diameters.

B A

Tool: GHFG ..R/L-8 see page E39
Insert: GDMY 8..

W = 8 mm
Tmax = 25 mm
Min. Dia. = 50 mm

Integral toolholders, used with 8 mm CUT-GRIP inserts. For heavy machining of medium and large parts. Can machine next to a shaft up to 25 mm depth.

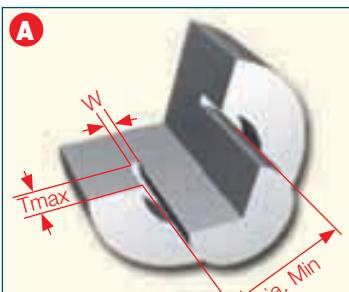

B A

Tool: GAFG ..R/L-8 (adapter)
see page E42
Insert: GDMM 8CC

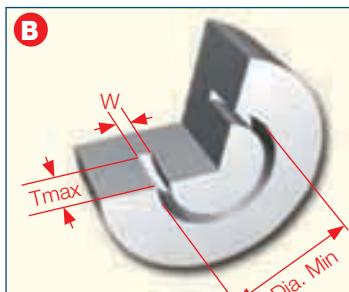

W = 8 mm
Tmax = 25 mm
Min. Dia. = 80 mm

Exchangeable adapters, used with 8 mm CUT-GRIP inserts. Can machine up to 25 mm depth next to a shaft. For heavy machining of medium and large parts.

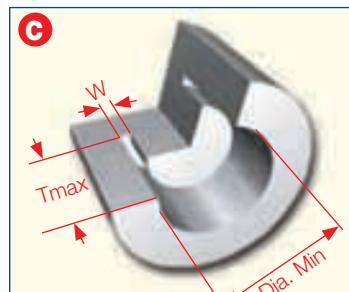

Main Applications

A 

Grooving Next to a Shaft

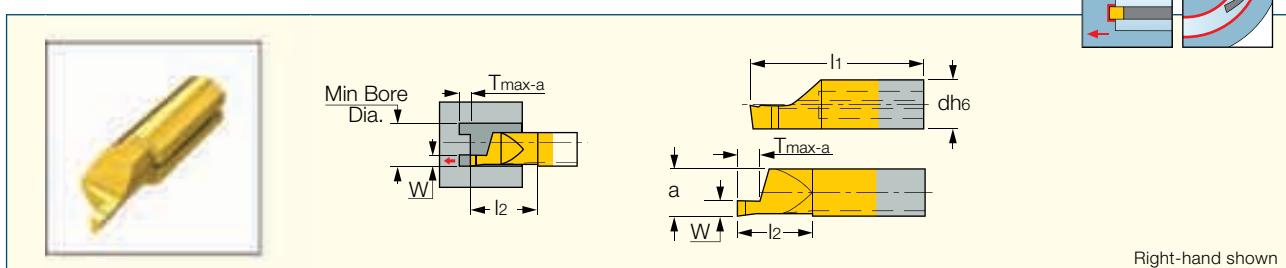

B 

External Grooving

C 

Internal Grooving

• Use HGN and GRIP inserts with right-hand toolholders only and HGPL inserts with left-hand toolholders • For user guide, see pages E52-68.

(1) Minimum penetration diameter (2) Maximum penetration diameter

For inserts, see pages: GRIP (E36) • GRIP (Full Radius) (B14) • HGN-C (E37) • HGN-J (D30) • HGN-UT (D31) • HGPL (E39).

No limitation for widening groove toward or away from center, except for the following tools:

Limitation of widening toward center depends on the major diameter (D) as per chart.

- After initial groove, no limitation to widening groove outward or toward center.

(1) Minimum penetration diameter (2) Maximum penetration diameter

For inserts, see pages: HFPR/L (E35) • HFPR/L (Full Radius) (E35) • GRIP (E36) • GRIP (Full Radius) (E37) • DGN/DGNC/DGNM-C (D24) • DGN/DGNC-J/J/S/J/T (E38) • DGN-W (D25) • HGPL (E39).

For holders, see pages: C#-HAD (G9) • C#-HAPR/L (G9) • HAI-C (E31) • HAPR/L (E23) • HAR/L (E23) • IM-HAD (G28) • IM-HAPR/L (G29).

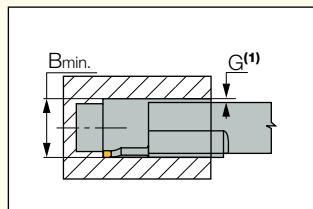

Adapters can be used for internal machining along bore.

Adapters can be mounted on standard HAI boring bars for internal machining and on HAR/L, HAPR/L holders for external machining

Boring, Face Grooving & Face Recessing Capacity

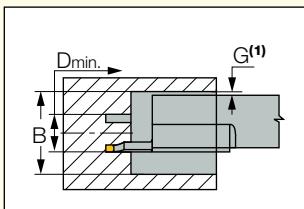

Boring

$$B \text{ Min.} = F + G + d/2$$

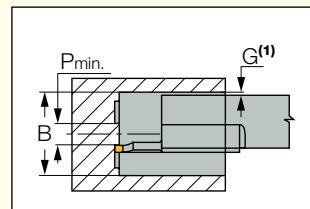

Face Grooving

$$D \text{ Min.} = 2F - B + 2G + d$$

Face Recessing

$$P \text{ Min.} = 2F - B - 2W + 2G + d$$

(1) The minimum recommended value for clearance (G) is 0.5 mm.

Spare Parts

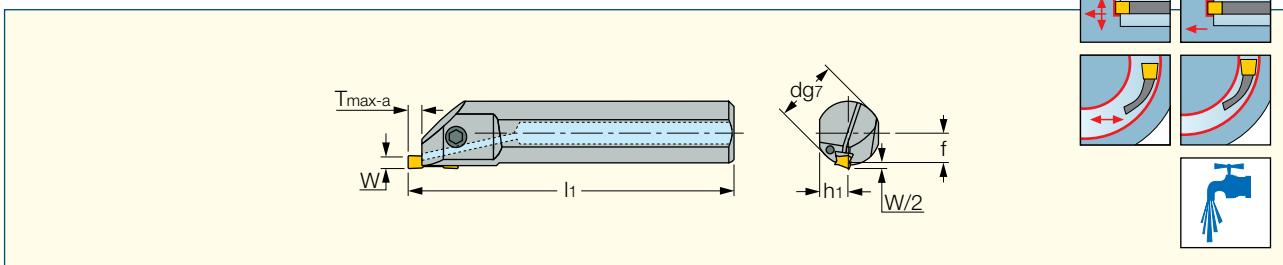

| Designation | Extractor |
|---------------------|-----------|
| HFAIR/L-5,6T | EDG 33B* |

* Optional, should be ordered separately

- DGN & GRIP 4.. - 6.. inserts can be used only with right-hand tools, HGPL 4.. - 6.. inserts with left-hand tools.
- After initial groove, no limitation to widening groove outward or toward center.
- For user guide, see pages E52-68.

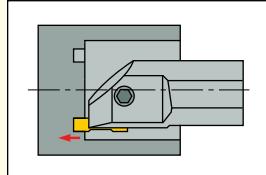

For inserts, see pages: HFPR/L (E35) • HFPR/L (Full Radius) (E35) • GRIP (E36) • GRIP (Full Radius) (E37) • DGN/DGNC/DGNM-C (E37)
• DGN/DGNM-J/JS/JT (E38) • DGN-UT/UA (D27) • DGN-W (D25) • HGPL (E39).

For holders, see pages: SC-T (Sleeves) (G21).

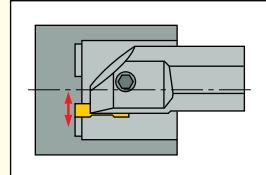

Boring

Internal Face Grooving

Internal Face Recessing

HFIR/L- MC Integral Boring bars

For shallow, internal face machining to max. 5 mm depth of groove. One boring bar can be mounted with inserts in 4-6 mm widths.

The initial major diameter groove is limited by the insert geometry in each size.

After initial groove, face recessing outward or toward center is not limited by insert geometry.

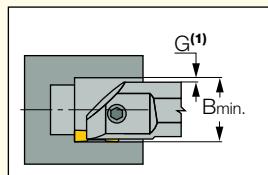

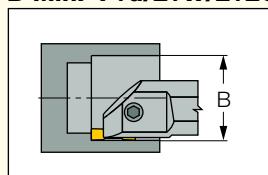

Insert Initial Face Grooving Range

| D | W | Min. | Max. |
|---|----|------|------|
| 4 | 23 | 90 | |
| 5 | 21 | 300 | |
| 6 | 20 | ∞ | |

Boring, Face Grooving & Face Recessing Capacity

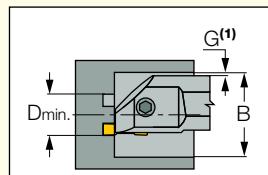

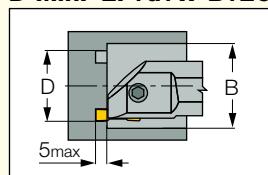

Boring

$$B \text{ Min.} = F + d/2 + W/2 + 2G$$

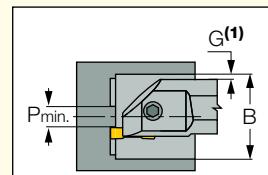

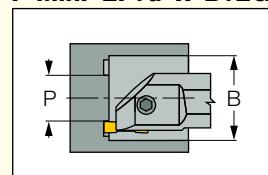

Face Grooving

$$D \text{ Min.} = 2F + d + W - B + 2G$$

Face Recessing

$$P \text{ Min.} = 2F + d - W - B + 2G$$

(1) The minimum recommended value for clearance (G) is 0.5 mm.

The Twisted Insert for Face Machining

The diagram shows a close-up of a twisted insert being machined into a workpiece. An inset provides a detailed view of the insert's geometry. To the right, a separate image shows the twisted insert body, highlighting its unique design and how it allows for machining depths much larger than its own length. Red arrows indicate the axial and radial directions of chip flow.

The double-ended, twisted insert body makes it possible to machine to depths much larger than insert length. Unique chipformer for controlled chip flow in axial and radial directions. The rear angle is slanted in relation to the frontal edge so it does not come into contact with the machined groove surface, as tool penetrates deeply into the workpiece.

- JT chipformer has the basic positive configuration of the J-type and a reinforced negative frontal edge. Most suitable for soft materials at low to medium feeds.
- For cutting speed recommendations and user guide, see pages E52-68.

(1) Sharp corners (2) Single-ended insert. (3) No depth limit

For tools, see pages: C#-HELR/L (G10) • C#-HFIR/L-MC (G12) • CR HFIR/L-M (E34) • DGAD-B-D (D23) • DGAD/HGAD (D22) • DGFH (B13) • DGFHL-26B-TR-D (D14) • DGFHR/L (D11) • DGFHR/L-B-D..(R/L) (D13) • DGFS (D12) • DGTR/L (D18) • DGTR/L-B-D-SH (D15) • DGTR/L-B-D-TR (D19) • DGTR/L-B-T-SH (D17) • DGTR/L-B/BC-D (D16) • DGTR/L-BC-T (D19) • HELIR/L (B11) • HFAER/L-4T (E24) • HFAER/L-5,6T (E25) • HFAIR/L-4T (E30) • HFAIR/L-5,6T (E32) • HFRR/L-T (E22) • HFHR/L-4T (E18) • HFHR/L-5T (E19) • HFHR/L-6T (E20) • HFIR/L-MC (E33) • HFPAD-4 (E21) • HFPAD-5 (E21) • HGPAD (B12) • IM-HFIR/L-MC (G29).

Adapters for Face Machining

| Designation | W | D ₁ min ⁽¹⁾ | D ₁ max ⁽²⁾ | T _{max-a} ⁽³⁾ | l ₁ |
|----------------------|------|-----------------------------------|-----------------------------------|-----------------------------------|----------------|
| GAFG 80R/L-8 | 8.00 | 80.0 | 115.0 | 23.00 | 63.50 |
| GAFG 105R/L-8 | 8.00 | 105.0 | 160.0 | 25.00 | 63.50 |
| GAFG 155R/L-8 | 8.00 | 155.0 | 510.0 | 25.00 | 63.50 |

- No limitation for widening of groove either way after initial grooving
- For user guide, see pages E52-68.

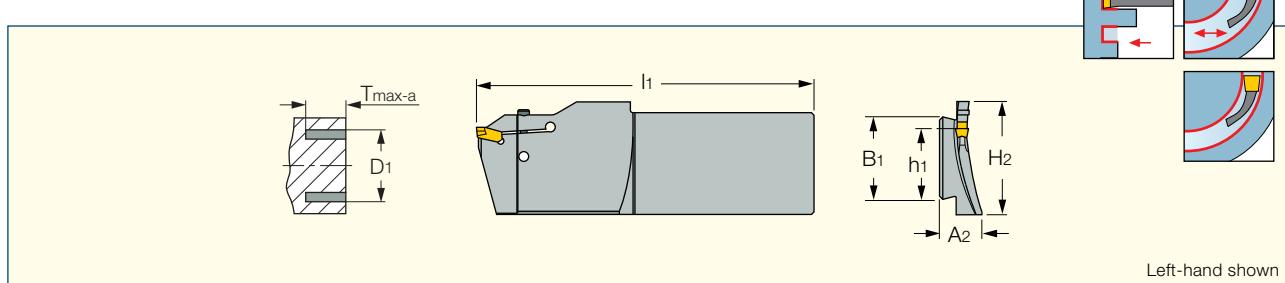

⁽¹⁾ Minimum penetration diameter ⁽²⁾ Maximum penetration diameter ⁽³⁾ For GIFG-8 & GDMDY-8 T_{max}=25 mm (.984") for D range.

For inserts, see pages: GDMF (B29) • GDMM-CC (E46) • GDMN (B31) • GDMU (B31) • GDMDY (E44) • GDMDY (Full Radius) (E45) • GDMDY-F (E45) • GIA-K (Long Pocket) (E44) • GIF (Long Pocket) (B43) • GIF-E (W=8,10 Full Radius) (B38) • GIF-E (W=8,10) (B35) • GIFG-E (W=8) (E43) • GIPA/GIDA 8 (Full Radius) (B48).

For holders, see pages: C#-GHAD-8 (G8) • C#-GHAPR/L-8 (G8) • GHAPR/L-8 (B27) • GHAR/L-8 (B27) • IM-GHAD-8 (G27) • IM-GHAPR/L-8 (G28).

CGFG 51-P8

Blades for Face Machining, Carry 8 mm Inserts

| Designation | W | D ₁ min ⁽¹⁾ | D ₁ max ⁽²⁾ | T _{max-a} | l ₁ | H ₂ | A ₂ |
|--------------------------|------|-----------------------------------|-----------------------------------|--------------------|----------------|----------------|----------------|
| CGFG 51-180R/L-P8 | 8.00 | 180.0 | 240.0 | 70.00 | 200.00 | 60.0 | 27.5 |
| CGFG 51-240R/L-P8 | 8.00 | 240.0 | 320.0 | 80.00 | 210.00 | 70.0 | 26.0 |
| CGFG 51-320R/L-P8 | 8.00 | 320.0 | 440.0 | 90.00 | 220.00 | 80.0 | 24.5 |
| CGFG 51-440R/L-P8 | 8.00 | 440.0 | 700.0 | 100.00 | 230.00 | 90.0 | 22.5 |
| CGFG 51-700R/L-P8 | 8.00 | 700.0 | 1500.0 | 120.00 | 250.00 | 100.0 | 20.0 |

- For user guide, see pages E52-68.

⁽¹⁾ Minimum penetration diameter ⁽²⁾ Maximum penetration diameter

For inserts, see pages: GIMF (B29) • GIMM 8CC (E46) • GIMY (B30) • GIMY (Full Radius) (B32) • GIMY-F (B34).

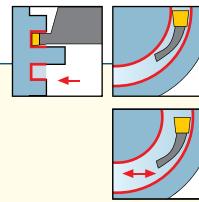

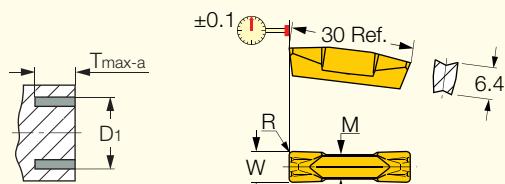

For holders, see pages: SGTBK (F3) • SGTBU/SGTBN (F2).

Spare Parts

| Designation | Screw | Key |
|-------------------|------------|--------|
| CGFG 51-P8 | SR M4-2052 | HW 3.0 |

GIFG-E (W=8)

Inserts for Deep Face Grooving and Turning

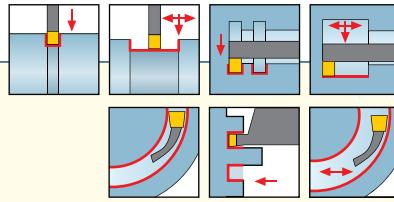

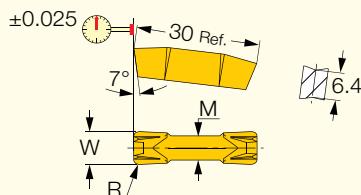

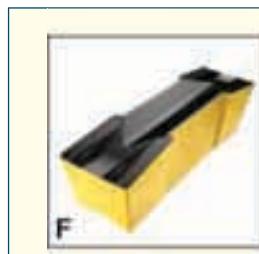

| Designation | Dimensions | | | | | Tough \leftrightarrow Hard | | Recommended Machining Data | |
|------------------------|--------------|--------------|-------------------|--------------------|-----|------------------------------|------|-------------------------------------|--|
| | $W \pm 0.02$ | $R \pm 0.05$ | $D_1 \text{ min}$ | $T_{\text{max-a}}$ | M | IC635 | IC20 | $f \text{ face-groove}$ (mm/rev) | |

• Dmin for internal machining = 65 mm (2.26") • For cutting speed recommendations and user guide, see pages E52-68.

For tools, see pages: C#-GHDR/L (G11) • CGHN-8-10D (B28) • GADR/L-8 (B28) • GAFG-R/L-8 (E42) • GHDR/L (Long Pocket) (B26) • GHDR/L-JHP (Long Pocket) (B26) • GHFGR/L-8 (E40) • GHIR/L (W=7.0-8.3) (B93).

GIA-K (Long Pocket)

Flat Top Precision Double-Ended Inserts with T-Land, for Machining Cast Iron

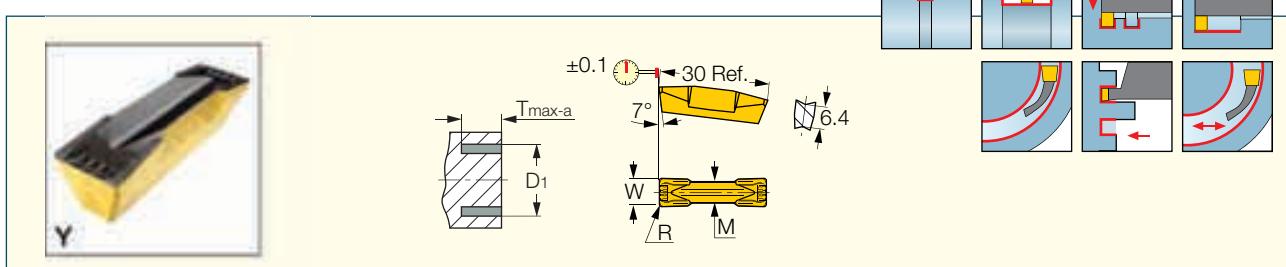

| Designation | Dimensions | | | | | Tough \leftrightarrow Hard | | Recommended Machining Data | | |
|-----------------------|----------------|----------------|-----|-------------|-----------|------------------------------|--------|----------------------------|---------------------|-----------------------|
| | $W^{\pm 0.02}$ | $R^{\pm 0.05}$ | M | T_{max-r} | D_1 min | IC428 | IC5010 | a_p (mm) | f_{turn} (mm/rev) | f_{groove} (mm/rev) |
| GIA 8.00K-0.80 | 8.00 | 0.80 | 6.0 | 25.00 | 160.0 | ● | ● | 1.00-4.80 | 0.36-0.64 | 0.18-0.38 |
| GIA 8.00K-1.20 | 8.00 | 1.20 | 6.0 | 25.00 | 160.0 | ● | ● | 1.45-4.80 | 0.36-0.70 | 0.18-0.38 |

• D_{min} for internal machining = 65 mm (2.26") • For cutting speed recommendations and user guide, see pages E52-68.

For tools, see pages: C#-GHDR/L (G11) • GADR/L-8 (B28) • GAFG-R/L-8 (E42) • GHDR/L (Long Pocket) (B26) • GHDR/L-JHP (Long Pocket) (B26) • GHFGR/L-8 (E40) • GHIR/L ($W=7.0-8.3$) (B93).

GDMY

Utility Double-Ended Inserts, for Turning and Grooving

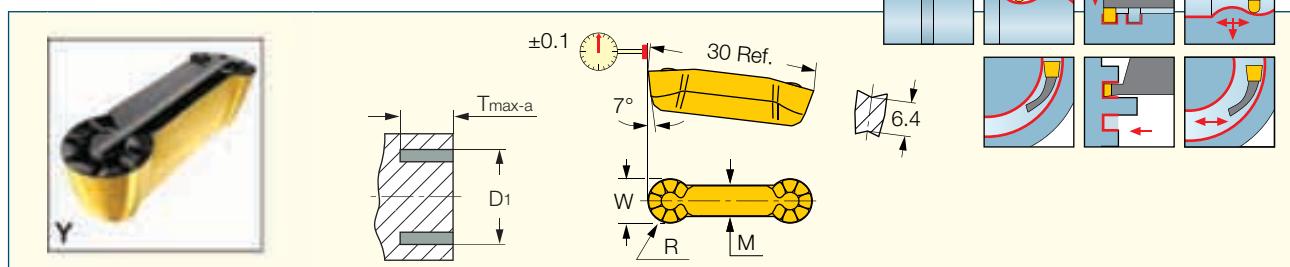

| Designation | Dimensions | | | | | Tough \leftrightarrow Hard | | | | | Recommended Machining Data | | | |
|-----------------|----------------|----------------|-----|-----------|-------------|------------------------------|--------|-------|------|-------|----------------------------|------------|---------------------|-----------------------|
| | $W^{\pm 0.05}$ | $R^{\pm 0.05}$ | M | D_1 min | T_{max-r} | IC830 | IC8250 | IC808 | IC20 | IC428 | IC5010 | a_p (mm) | f_{turn} (mm/rev) | f_{groove} (mm/rev) |
| GDMY 808 | 8.00 | 0.80 | 6.0 | 50.0 | 27.00 | ● | ● | ● | ● | ● | ● | 1.00-4.80 | 0.32-0.56 | 0.18-0.34 |

• D_{min} for internal machining = 65 mm (2.26") • For cutting speed recommendations and user guide, see pages E52-68.

For tools, see pages: C#-GHDR/L (G11) • CGHN-8-10D (B28) • GADR/L-8 (B28) • GAFG-R/L-8 (E42) • GHDR/L (Long Pocket) (B26) • GHDR/L-JHP (Long Pocket) (B26) • GHFGR/L-8 (E40) • GHIR/L ($W=7.0-8.3$) (B93).

GDMY (Full Radius)

Utility Double-Ended Full Radius Inserts for Grooving and Profiling

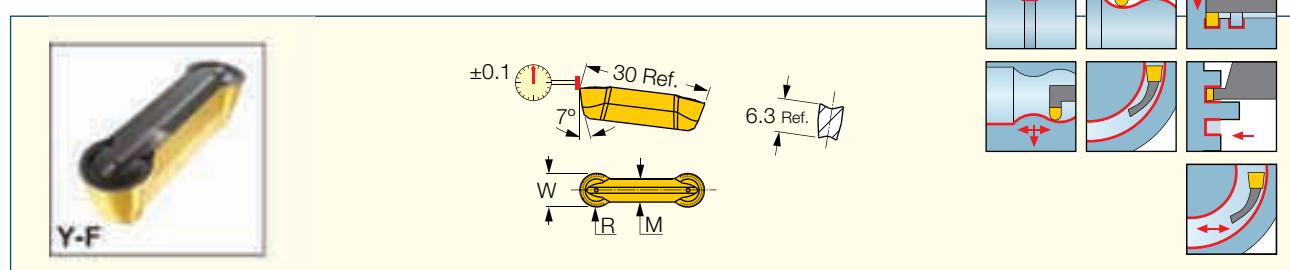

| Designation | Dimensions | | | | Tough \leftrightarrow Hard | | | | | | Recommended Machining Data | | | |
|-----------------|--------------|--------------|-----|-------|------------------------------|--------|-------|------|-------|--------|----------------------------|------------|-----------------|-------------------|
| | $W \pm 0.05$ | $R \pm 0.05$ | M | D_1 | IC830 | IC8250 | IC808 | IC20 | IC428 | IC5010 | IC806 | a_p (mm) | f turn (mm/rev) | f groove (mm/rev) |
| GDMY 840 | 8.00 | 4.00 | 5.6 | 50.0 | 25.00 | ● | ● | ● | ● | ● | ● | 0.00-4.00 | 0.32-0.67 | 0.18-0.34 |

- Can cut arcs to 250°
- Dmin for internal machining = 65mm (2.26")
- For cutting speed recommendations and user guide, see pages E52-68.

For tools, see pages: C#-GHDR/L (G11) • CGHN-8-10D (B28) • GADR/L-8 (B28) • GAFC-R/L-8 (E42) • GHDR/L (C10) • GHDR/L (Long Pocket) (B26) • GHDR/L-JHP (Long Pocket) (B26) • GHFG-R/L-8 (E39) • GHFGR/L-8 (E40) • GHIR/L ($W=7.0-8.3$) (B93).

GDMY-F

Utility Double-Ended Inserts, for Grooving and Profiling Ductile Materials

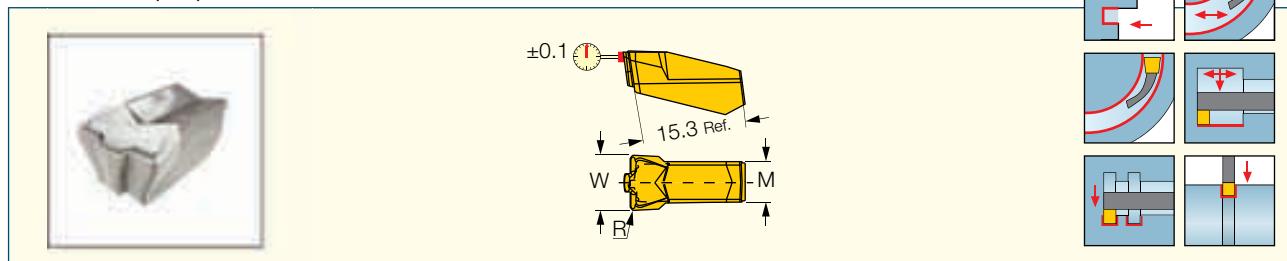

| Designation | Dimensions | | | | Tough \leftrightarrow Hard | | Recommended Machining Data | | |
|------------------|--------------|--------------|-----|-------------|------------------------------|-------|----------------------------|-----------------|-------------------|
| | $W \pm 0.05$ | $R \pm 0.05$ | M | T_{max-r} | IC808 | IC908 | a_p (mm) | f turn (mm/rev) | f groove (mm/rev) |
| GDMY 840F | 8.00 | 4.00 | 5.6 | 25.00 | ● | ● | 0.00-4.00 | 0.32-0.67 | 0.18-0.34 |

- Dmin for internal applications = 65 mm (2.56")
- For cutting speed recommendations and user guide, see pages E52-68.

For tools, see pages: C#-GHDR/L (G11) • CGHN-8-10D (B28) • GADR/L-8 (B28) • GAFC-R/L-8 (E42) • GHDR/L (Long Pocket) (B26) • GHDR/L-JHP (Long Pocket) (B26) • GHFG-R/L-8 (E39) • GHFGR/L-8 (E40) • GHIR/L ($W=7.0-8.3$) (B93).

GIMM 8CC

Single-Ended Utility Insert for External Rough Grooving and Side Turning with a Frontal Chip Splitter

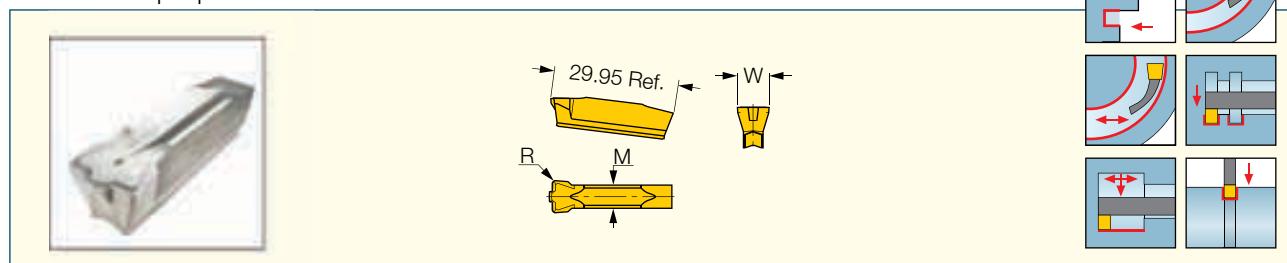

| Designation | Dimensions | | | Tough \leftrightarrow Hard | | Recommended Machining Data f face-groove (mm/rev) |
|-----------------|--------------|--------------|-----|------------------------------|-------|--|
| | W ± 0.05 | R ± 0.05 | M | IC808 | IC908 | |
| GIMM 8CC | 8.00 | 0.80 | 5.8 | ● | ● | 0.30-0.45 |

• For cutting speed recommendations, see pages E52-68.

For tools, see pages: CGFG 51-P8 (E42) • CGHN-P8 (B25) • CGHR/L-P8DG (B25) • GHDR/L (Short Pocket) (B19) • GHGR/L (B21).

GDMM-CC

Single-Ended Utility Insert for External Rough Grooving and Side Turning with a Frontal Chip Splitter

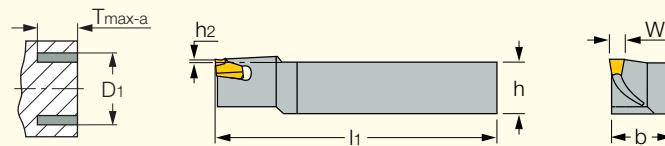

| Designation | Dimensions | | | Tough \leftrightarrow Hard | | Recommended Machining Data f face-groove (mm/rev) |
|-----------------|--------------|--------------|-----|------------------------------|--------|--|
| | W ± 0.05 | R ± 0.05 | M | IC830 | IC354† | |
| GDMM 8CC | 8.00 | 0.80 | 5.6 | ● | ● | 0.30-0.45 |

• For cutting speed recommendations, see pages E52-68.

For tools, see pages: C#-GHDR/L (G11) • GADR/L-8 (B28) • GAFG-R/L-8 (E42) • GHDR/L (Long Pocket) (B26) • GHDR/L-JHP (Long Pocket) (B26) • GHFG-R/L-8 (E39) • GHFGR/L-8 (E40) • GHIR/L (W=7.0-8.3) (B93).

Clamping the Insert

Clamping an insert correctly into the holder is necessary for stable machining.

- Be sure that the seat is clean of dirt and swarf.
- At the first stage of clamping, ease the insert gently into place. Make sure that the prismatic surfaces match.

**• Screw Clamping Torque**

| Insert Width | Nxm |
|--------------|-----|
| 3 | 4-5 |
| 4 | 5-6 |
| 5 | 6-7 |
| 6/8 | 7-9 |
| CGFG 51... | 4-6 |

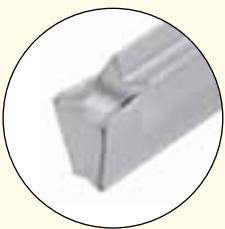

The unique chipformer is designed for deep grooving and face turning both toward and away from center, with excellent chip formation.

**HELIFACE
HFPR/L & HGPL Type**

For general use in turning & grooving on all kinds of materials. Use for deep grooving in low-to-medium feeds 0.04-0.15 mm/rev. Min grooving dia. 12 mm.

**HELI-GRIP
GRIP...Y Type**

The "all in one" insert: for parting, external grooving and turning, internal grooving and turning, face grooving and turning.

**DO-GRIP
DGN...C Type**

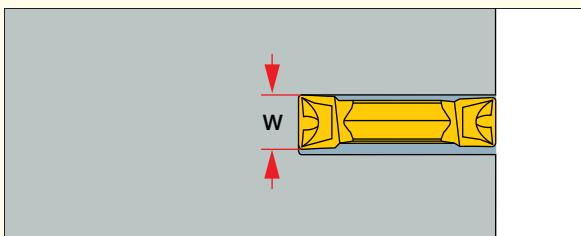

For grooving operations only. Strong cutting edge for hard materials and tough applications in feeds 0.1-0.2 mm/rev.

**DO-GRIP
DGN...J Type**

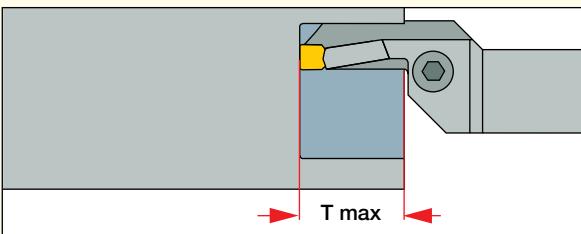

For grooving operations only. Positive rake, for soft materials in low-to-medium feeds 0.05-0.15 mm/rev.

Face Machining Guide

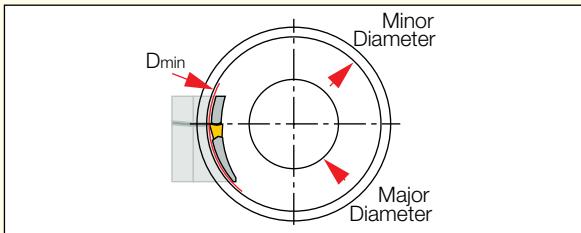

Tool Selection - Follow these recommendations to choose the right tool for high performance.

Choose the widest possible insert and tool, according to the cutting width and geometry to be machined.

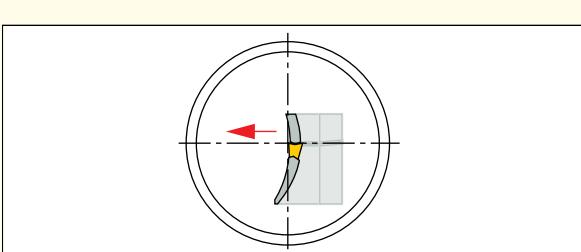

Choose the shortest tool blade overhang, according to the maximum depth required.

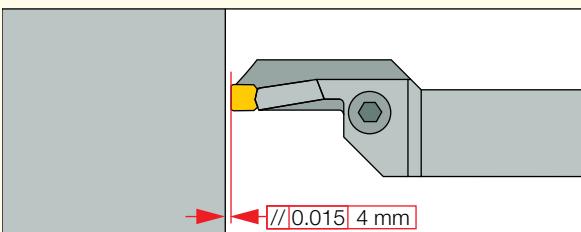

Choose the tool range with the largest diameter, depending on the initial grooving diameter required in the application.

Remark: On integral shank tools the given range refers to the holder capacity.

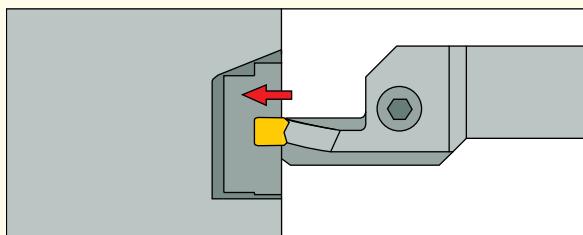

Check the cutting edge height at center line, machine in light turning down to center, and check for burr.

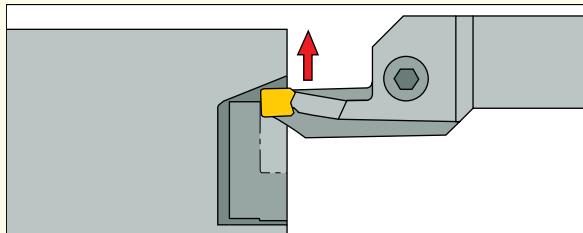

Check parallelism of cutting edge and the machined surface. Correct position can guarantee good surface quality when face turning in both directions.

Face Machining Guide

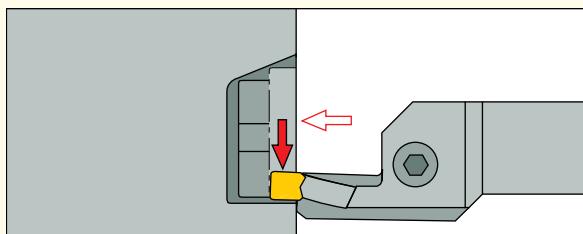

Recommended machining sequence in roughing operation using multifunction HELIFACE tools.

**1**

Groove at the initial diameter up to the depth of cut selected for next step in face turning.

**2**

Continue with face turning away from center.

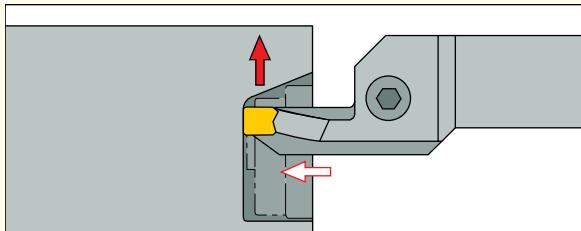

**3**

After rapid positioning back into initial groove, continue with face turning to center.

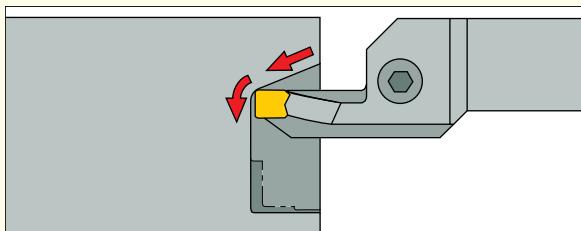

Note: When face grooving, reduce the speed by 40% in relation to that used in face turning.

Optimizing the Machining Sequence

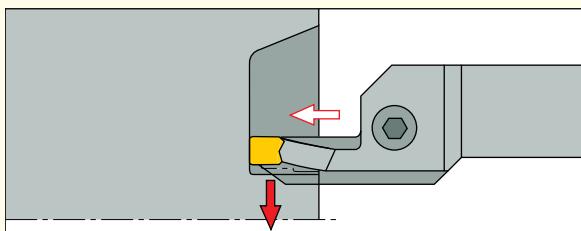

Recommended machining sequence using multifunction tools.

**1**

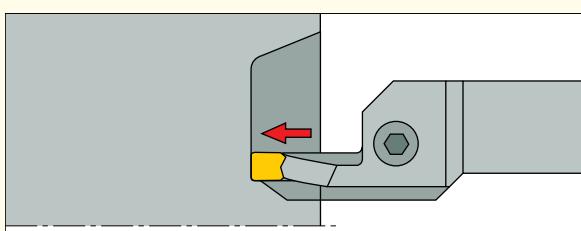

Groove at the initial diameter to the final depth of groove and continue face turning away from center to the tangential point on the radius.

**2**

Finish major diameter toward the bottom and generate the radius.

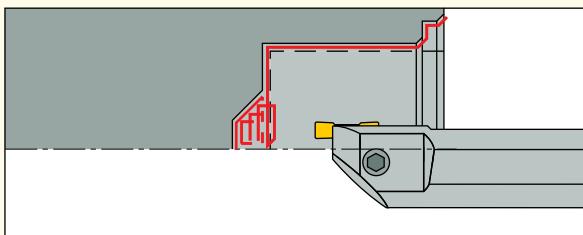

**3**

Position the tool in rapid movement in the initial groove, continue face turning to center, without touching the machined roughing steps on the wall.

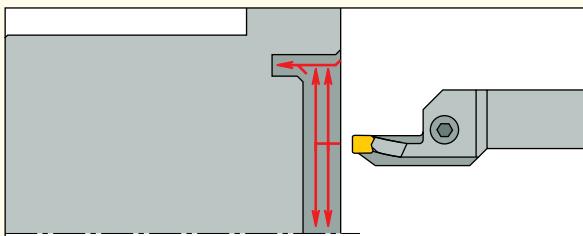

**4**

Finish boring the minor diameter to the bottom, up to final depth.

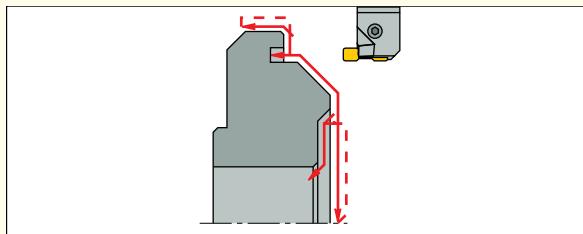

Note: When face grooving, reduce the speed by 40% in relation to that used in face turning.

The Multifunction Advantage**1**

The **HELIFACE** internal boring bar **HFIR/L MC** type with internal coolant can replace the three different ISO tools and shorten machining time by 20%.

**2**

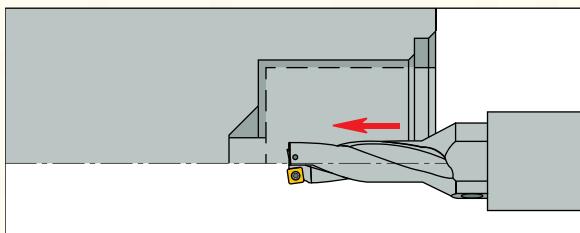

A single multifunction tool machines the whole part: grooving, face turning and chamfering, replacing three ISO tools and reducing machining time by 40%.

**3**

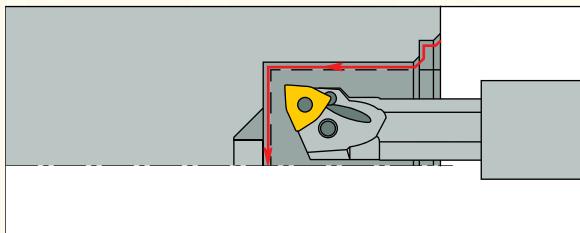

A single integral **HELIFACE** tool **HFHPL-M** replaces three ISO tools and reduces machining time by 50%.

The Multifunction Advantage

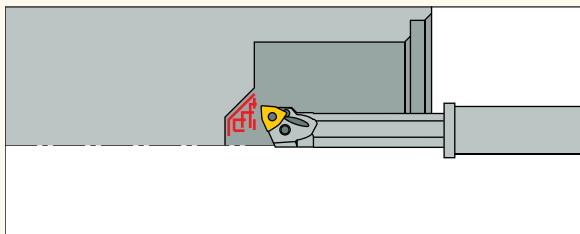

This workpiece was machined using three different conventional tools.

**1**

An indexable drill for bottom drilling.

**2**

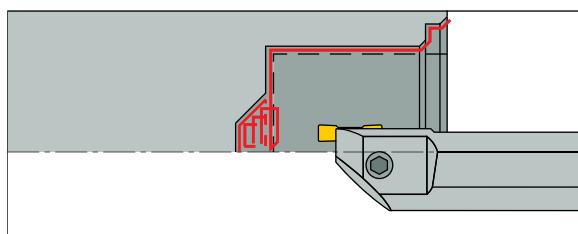

A standard internal boring bar with trigon insert for roughing and finishing.

**3**

A standard internal boring bar with trigon insert for bottom machining.
This operation requires a small diameter shank and long overhang.

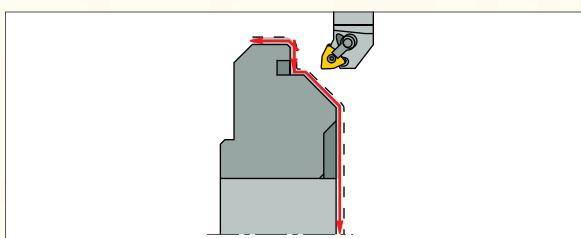

The HELIFACE Solution

The HELIFACE internal boring bar **HFIR/L MC** type with internal coolant can replace the three different ISO tools and shorten machining time by 20%.

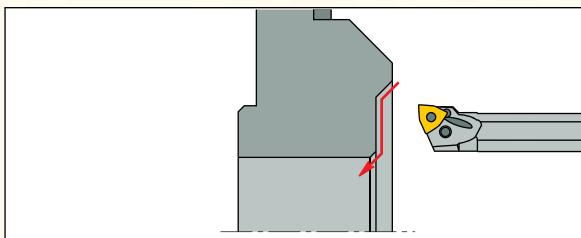

The Multifunction Advantage

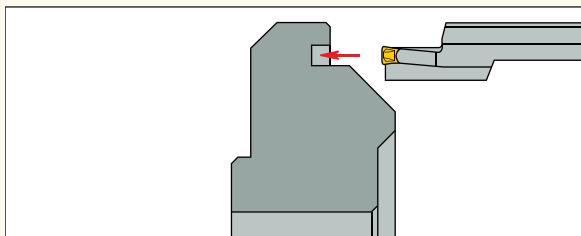

This part was machined using three different conventional tools.

**1**

A standard ISO tool for external turning.

**2**

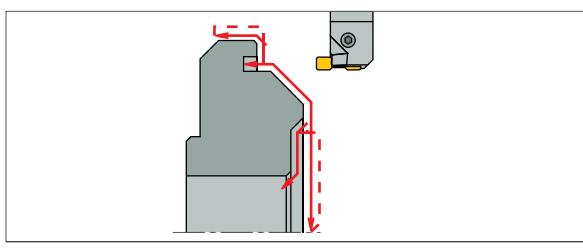

A boring bar for face turning and chamfering.

**3**

A face grooving tool for grooving, recessing and chamfering.

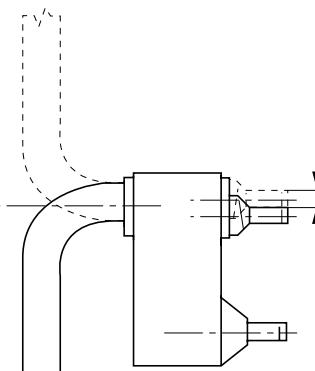

The HELIFACE Solution

A single integral HELIFACE tool **HFHPL-M** replaces three ISO tools and reduces machining time by 50%.

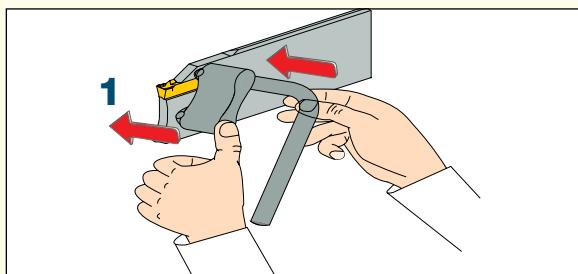

Insert Replacement**EDG 33B**

The New Eccentric Extractor

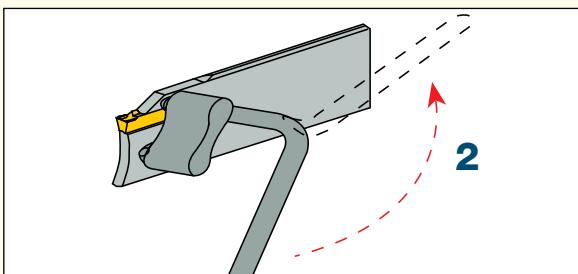

Simple to operate; controlled rotation requires low force; guarantees limited upper jaw movement and secures maximum load on blade.

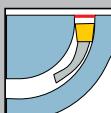

Two extractor pins are placed in the two holes in the holder blades.

**Indexing**

Place the EDG extractor in the holes

- 1- Hold the extractor against the tool.
- 2- Rotate the eccentric handle to lift the upper jaw.

**Grade Selection for Facing Applications**

Machining Conditions in Face Grooving

Recommended feed range for grooving, with **HFPR/L** inserts in various widths.

Chip shapes for grooving, according to width of insert and feed, using **HFHR/L** toolholders.

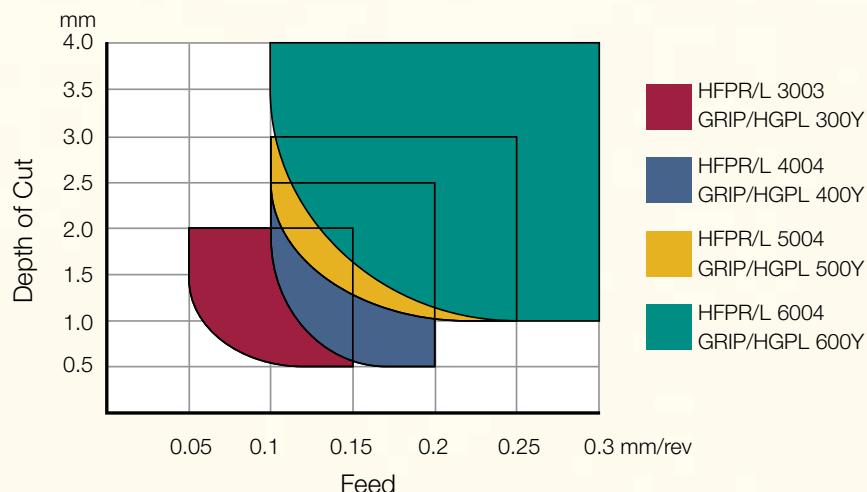

Note: In face grooving, narrowed and deformed chips are preferred.

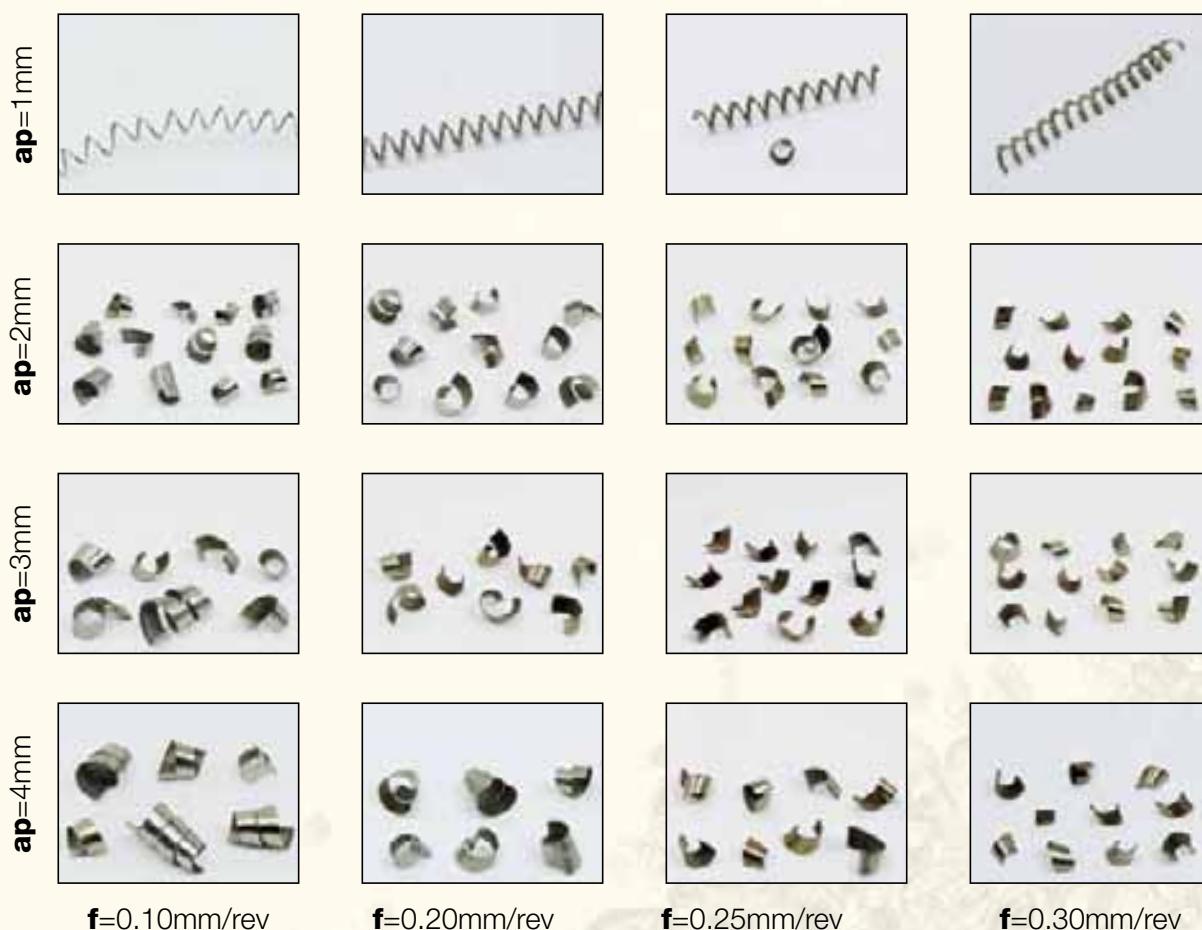

Curled and long chips can flow out more easily from deep grooves.

Machining Conditions in Face Turning

Recommended depth of cut and feed range for face turning with **HFPR/L** inserts in various widths, using **HFHR/L** toolholders.

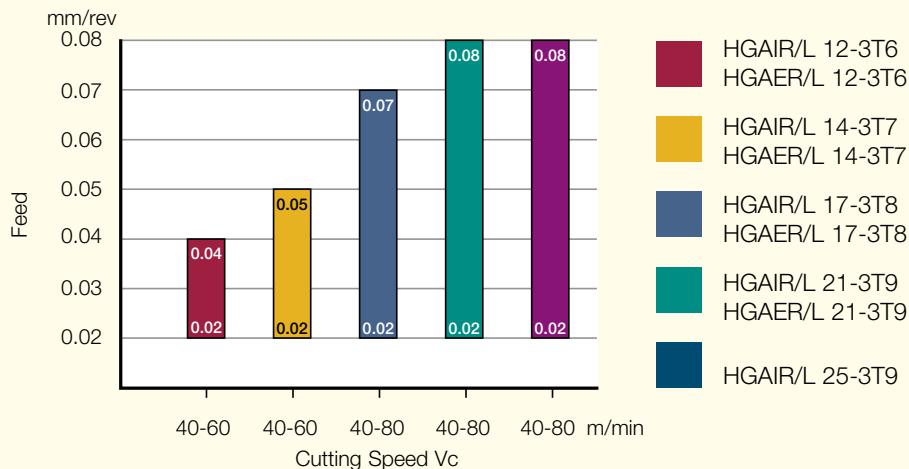

Chip shapes in face turning with inserts **HFPR/L-5004** & **HFPR/L 6004** and **HFHR/L** toolholders

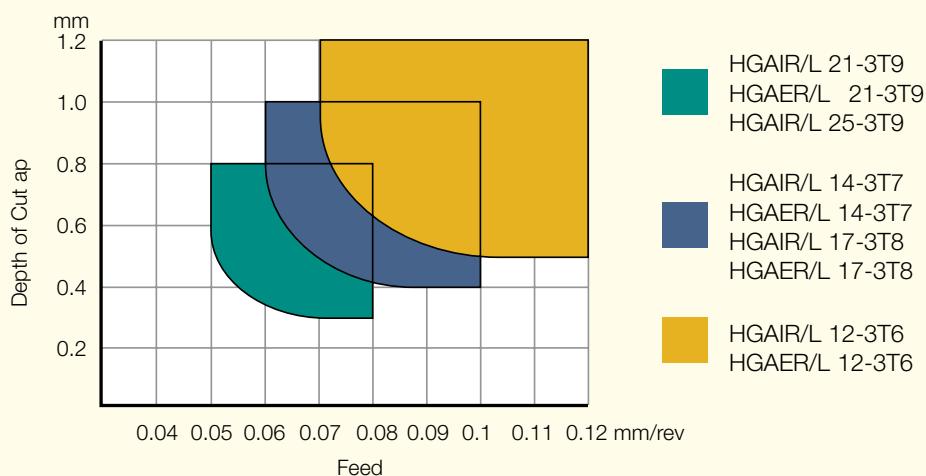

Note: In roughing, increase feed at small depth of cut, and reduce feed at large depth of cut

Face Grooving and Turning Recommendations Using Adapters for 3 mm Inserts

Recommended feed range for grooving with **GRIP 3...** and **HGPL 3...** inserts, with HGAIR/L and HGAER/L adapters. Feed range changes according to adapter type.

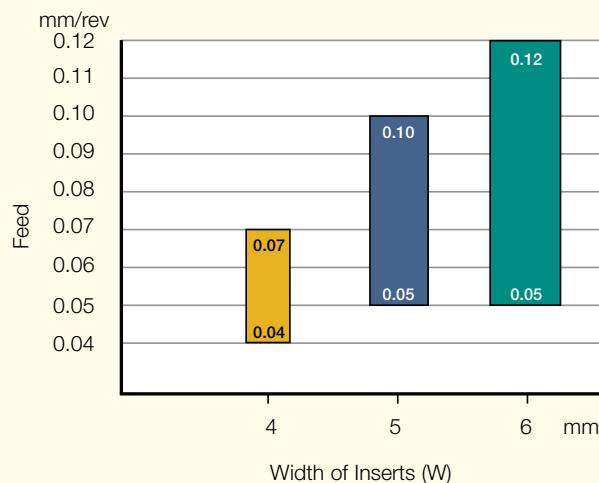

Recommended depth of cut and feed range for turning with and inserts, with **HGAIR/L** and **HGAER/L** adapters. Feed range changes according to adapter type.

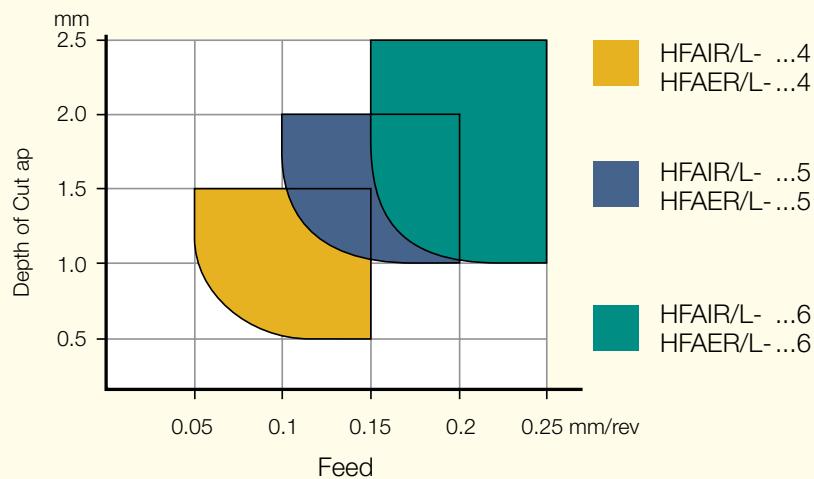

Note: In roughing, increase feed at small depth of cut, and reduce feed at large depth of cut.

Face Grooving and Turning Recommendations Using Adapters for 4-6 mm Inserts

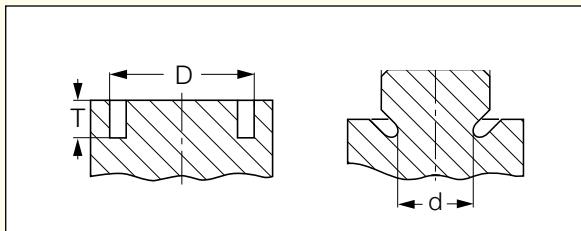

Recommended feed range in grooving with **HFPR/L** inserts and **HFAIR/L** & **HFAER/L** adapters.

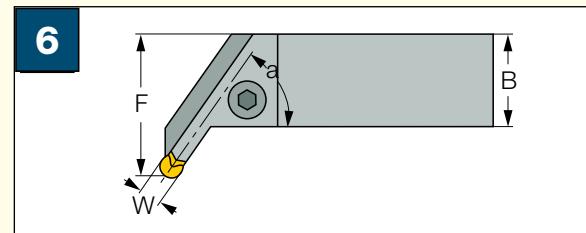

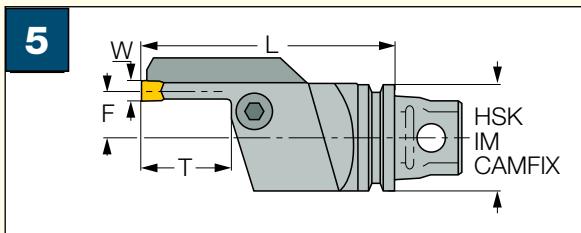

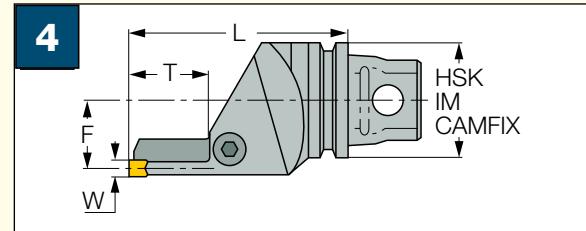

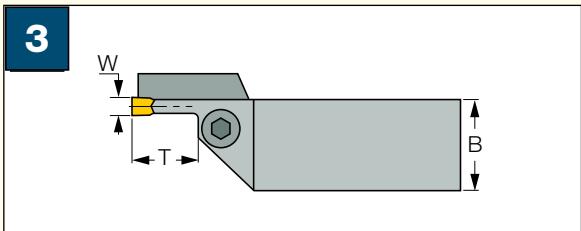

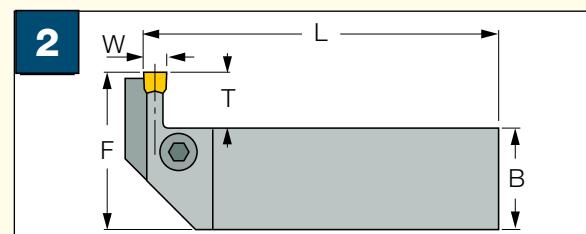

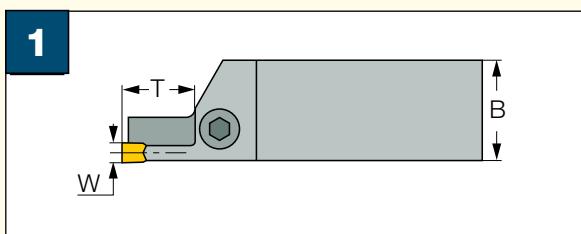

Recommended depth of cut and feed range in turning with **HFPR/L** inserts and **HFAIR/L** & **HFAER/L** adapters. Feed range changes according to adapter type.

Note: In roughing, reduce feed when depth of cut is increased, ad increase feed at small depth of cut.

Specially Tailored**Semi-Standard Face Grooving and Undercutting Tools**

The following drawings show typical semi-standard face grooving tools which can be ordered. Please specify all relevant dimensions and attach workpiece material geometric details.

USER GUIDE

JET-CUT Assembly

C Insert GF□

D Blade SGFH□K-□

E Cap SGC 340 supplied with each blade. To be used only with Option 1.

F Tool block SGTBU□c-□

G Elbow-style connector unit supplied with each tool block. SGCU-344.

H 3/16" copper Tube 343

(length 250 mm).

I Choice of connector sets:

CGM-343 (G1/8 external thread).

CGF-343 (G1/8 internal thread).

CF-343 (NPT 1/8 internal thread).

J Standard current tool block.

SGTBN, SGTBU, SGTBF.

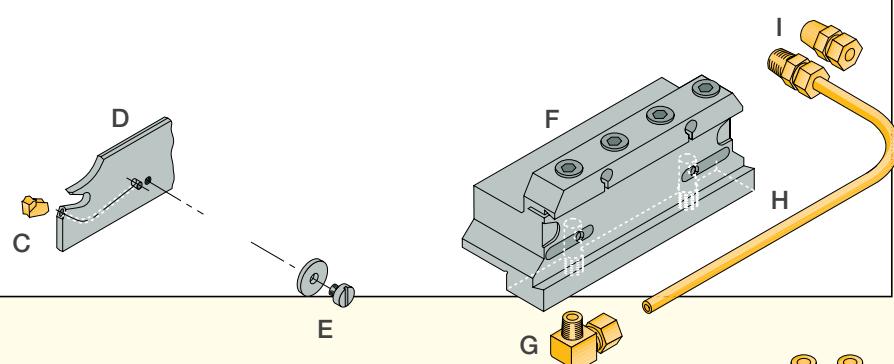

K Coolant connection unit. SGCU-341.

M Integral shank holder

SGTFR/L□K-□

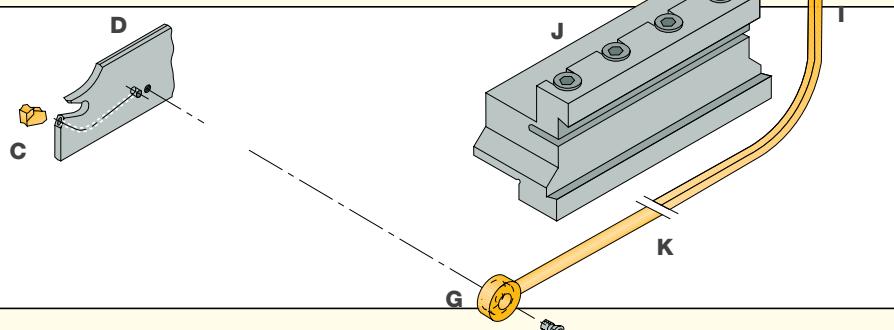

Option 1:

Coolant supplied through the tool block.

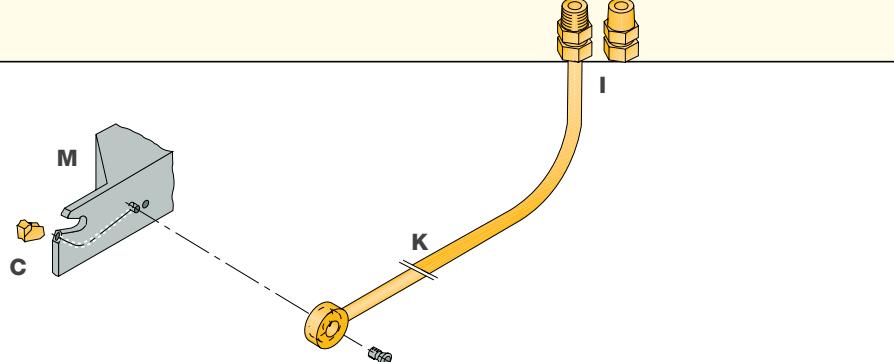

Option 2:

Coolant supplied directly to the blade.

Option 3:

Coolant supplied directly to the integral shank tool.

USER GUIDE

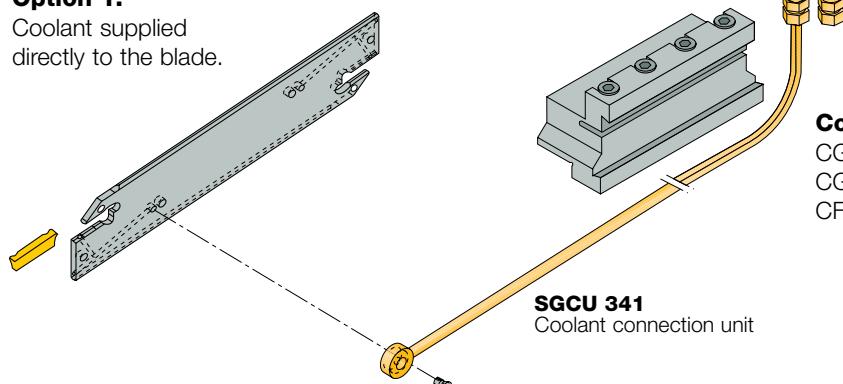

The coolant supply tube can be attached directly to the DGTR...C integral tool, to the DGFH-C blades used on

the regular blocks, or to the SGTBU-C blocks which have coolant passages and connecting ports.

JET-CUT Assembly The Right Connection for Your Application

Option 1:

Coolant supplied directly to the blade.

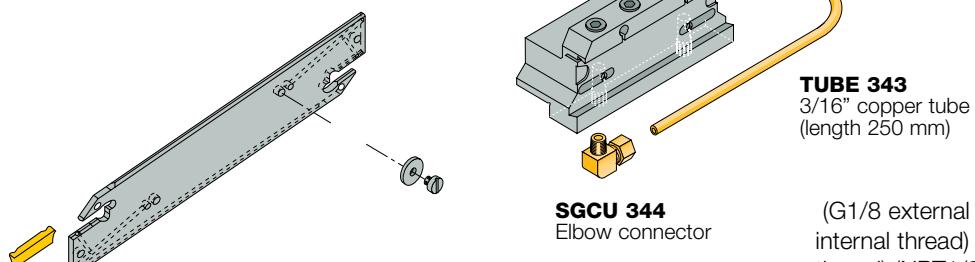

Connectors:

CGM 343 (G1/8 external thread)
CGF 343 (G1/8 internal thread)
CF 343 (NPT1/8 internal thread)

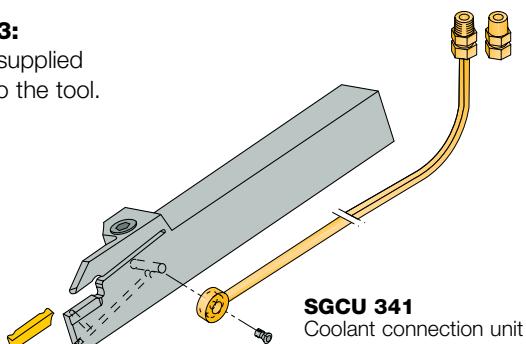

Option 2:

Coolant supplied through the tool block.

Option 3:

Coolant supplied directly to the tool.

Connectors:

CGM 343 (G1/8 external thread)
CGF 343 (G1/8 internal thread)
CF 343 (NPT1/8 internal thread)

EXCHANGEABLE HEADS

| Tools and Holders with Exchangeable Hollow Tapered Shanks | Page |
|---|------|
| CAMFIX (ISO 26623-1) | G3 |
| HSK-T (ISO 12164-3 T Type and ICTM Standard) | G15 |
| IM (ISO 26622-1 and Mazak XMZ Standard) | G22 |

ISCAR offers a wide range of tools for three types of Quick-Change systems:

CAMFIX (ISO 26623-1),
HSK-T (ISO 12164-3 T Type and ICTM Standards) and
IM (ISO 26622-1 and Mazak XMZ Standards)

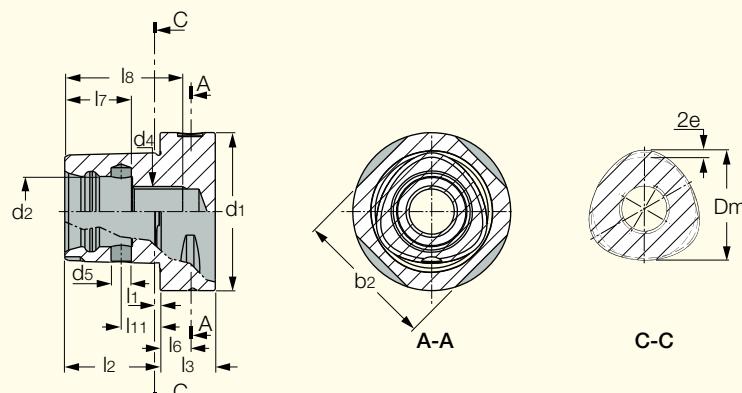

CHAMFIX (ISO 266231)

Quick-Change tools are expensive compared to standard shank tools. ISCAR offers economical solutions by using adapters, blades, or regular tools and boring bars on the Quick-Change adaptations.

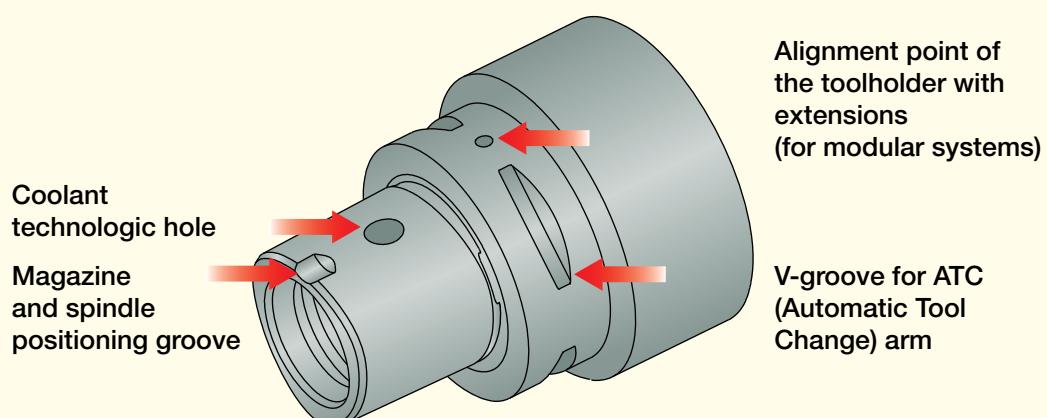

HSK-T (ISO 1264-3 T Type and ICTM Standard)

| CAMFIX | b ₂ | d ₁ ±0,1 | d ₂ | d ₄ | d ₅ ±0,1 | D _m | e | l ₁ | l ₂ ±0,1 | l ₃ min | l ₆ ±0,15 | l ₇ ±0,15 | l ₈ min | l ₁₁ ±0,1 |

CAMFIX - ISO 26623-1 Standard Quick Change Shanks

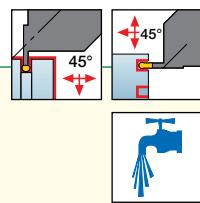

Features

- Symmetrical design:** Due to the symmetrical design, the torque load is distributed on the polygon, providing a self-centering effect.
- Rigidity:** The CAMFIX clamping mechanism is extremely rigid against bending forces.
- Accuracy:** The taper and face contact ensure high repeatability within 2 microns, when operated with an automatic tool changer.

MODULAR-GRIP • CAMFIX

C#-MAHDR-45

Holders for Parting, Grooving, Turning and Facing Adapters
with CAMFIX (ISO 26623-1 standard) Exchangeable Shanks

Right-hand shown • T= See specific adapter dimensions.

| Designation | SS | L | f ₁ | D ₁ | L ₃ |
|--------------------|----|--------|----------------|----------------|----------------|
| C6 MAHDR-45 | 63 | 130.00 | 89.0 | 75.0 | 105.78 |
| C8 MAHDR-45 | 80 | 130.00 | 89.0 | 80.0 | - |

For tools, see pages: CGPAD (B23) • DGAD-B-D (D23) • DGAD/HGAD (D22) • HFPAD-3 (E20) • HFPAD-4 (E21) • HFPAD-5 (E21) • HFPAD-6 (E22) • HGPAD (B12) • PCADR/L (B55) • TGAD (D39) • TGPAD (B15).

Spare Parts

| Designation | Lower Locking Screw | Key | Side Locking Screw | Upper Locking Screw | Key 1 | Sealing Screw | Cooling Nozzle |
|--------------------|---------------------|--------|--------------------------|----------------------------|--------|------------------------------|----------------|
| C6 MAHDR-45 | SR M5-04451 | T-20/5 | SR 14-519 ⁽²⁾ | SR M6X20DIN7984 | HW 4.0 | SR M6X6DIN551 ⁽³⁾ | EZ 83 |

* Optional, should be ordered separately

Coolant Nozzle Adjustment Instructions:

In order to adjust the coolant nozzle and/or redirect the coolant, follow these steps:

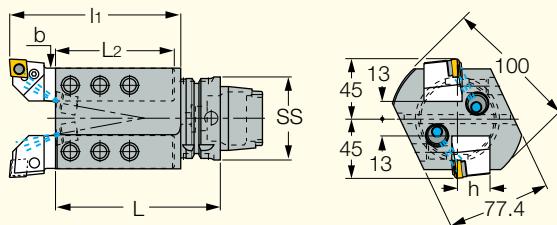

- Open the nut by turning it approximately three-quarters of a turn counterclockwise.
- Adjust the coolant nozzle so it will direct the coolant to the area of the cutting edge.
- Close the nut by turning it approximately three-quarters of a turn clockwise.
- The special (WRENCH NOZZLE HP) key should be used.

S.T. SUMO TEC **■** PVD COATED **■** CVD COATED

ISCAR Groove Turn Grades Chart

| | PARTING | GROOVING | FACING |
|--|---------|----------|--------|
| Recommended Applications | | | |
| A TiN PVD coated tough grade. Used for grooving and threading a wide range of workpiece materials, at low cutting speeds. | ■ | ■ | |
| A TiN/TiCN PVD coated tough grade. Used for milling, grooving, parting and drilling a wide range of workpiece materials, at low to medium cutting speeds. | ■ | | |
| A TiN/TiCN PVD coated, tough grade. Used for general applications in parting and grooving carbon, alloy and stainless steel at medium to high cutting speeds. | ■ | ■ | ■ |
| A tough submicron substrate, TiN/TiCN/TiN PVD coated. Used for grooving and drilling a wide range of workpiece materials, at low to medium cutting speeds. | | ■ | |
| A tough submicron substrate, TiAlN PVD coated grade followed by a special SUMO TEC surface treatment. Suitable for turning inconel at low to medium cutting speeds. | | ■ | |
| A tough submicron substrate, TiAlN PVD coated grade. Suitable for turning heat resistant alloys, austenitic stainless steel and hard steel at low to medium cutting speeds. | ■ | ■ | |
| A tough submicron substrate, TiAlN PVD coated grade. Designed for machining heat resistant alloys, austenitic stainless steel, hard alloys and carbon steel at medium to high cutting speeds, interrupted cut and unfavorable conditions. Excellent notch wear and built-up edge resistance. | ■ | ■ | ■ |
| A PVD TiAlN coated tough grade. Suitable for milling stainless steel, high temperature alloys and other alloy steels. Recommended for interrupted cut and heavy operations. | ■ | ■ | ■ |
| A tough submicron substrate, TiAlN/TiN PVD coated grade. Used for parting and grooving high temperature alloys, stainless and hardened steel, at low to medium speeds and for interrupted cuts. | | ■ | |
| A TiC/Al ₂ O ₃ multilayer, CVD coated grade. Used for grooving and turning grey and nodular cast iron at medium to high cutting speeds. Can be used for interrupted cuts and heavy machining. | | ■ | |
| A TiC/Al ₂ O ₃ multilayer, CVD coated grade. Used for grooving and turning grey and nodular cast iron at medium to high cutting speeds. | ■ | ■ | ■ |
| A TiCN/Al ₂ O ₃ /TiN multilayer, CVD coated grade. Used for turning grey and nodular cast iron at medium to high cutting speeds. | | ■ | ■ |
| A tough substrate with a cobalt enriched layer combined with MTCVD TiCN and a thick alpha Al ₂ O ₃ CVD coating. Recommended for general use machining of steel in a wide range of conditions, featuring high toughness and wear resistance. | | ■ | ■ |

 CERMET  UNCOATED  CBN  PCD

ISCAR Groove Turn Grades Chart

| | PARTING | GROOVING | FACING |
|--|---------|----------|--------|
| Recommended Applications | | | |
| A cermet grade, used for grooving and turning applications. Recommended for semi-finishing and finishing operations when excellent surface finish is required. Wear resistant, prevents built-up edge. | | ■ | |
| A cermet grade. Provides excellent resistance to wear and plastic deformation even at high cutting speeds and medium feeds. Useful for turning and milling of semi-finishing and finishing applications. | ■ | | |
| An uncoated, fine grain carbide grade. Used for stainless steel and high temperature alloys at low to medium cutting speeds. | ■ | ■ | ■ |
| An uncoated carbide grade. Used for semi-finishing, finishing and semi-roughing of aluminum, cast iron and stainless steel. Used at low to medium speeds and feeds. | ■ | ■ | ■ |
| Super fine grain PCBN with a very high CBN content for machining ferrous sintered metals. | | | |
| A 50% CBN brazed tip, used for finishing hardened steel (45-65 HRc) and nodular cast iron in continuous cutting. | | ■ | |
| A 55% CBN brazed tip, used for finishing hardened steel (45-65 HRc) in continuous cutting. | ■ | | |
| A PCD brazed tip, suitable for machining aluminum (Si < 12%) and copper alloys and general cutting of nonferrous materials. | | ■ | |

Quality Standard

ISCAR has been certified by the prestigious Standards Institution, as being in full compliance with Quality and Environmental & Occupational Health and Safety Management Standards -
AS 9100 Rev C
ISO 9001:2008
ISO 14001:2004
OHSAS 18001:2007

In addition, completed products are inspected before shipping, to ensure delivery of the finest quality goods. Quality control facilities include the metallurgical laboratory, raw metal testing, an online testing procedure and a machining center for tool performance testing and final product inspection.

Only the finest products are packaged for entry into ISCAR's inventory.
